ISSUED: FEBRUARY 2024

Stormwater Pollution Prevention Plan

City of Phoenix Aviation Department

Phoenix Sky Harbor International Airport

Prepared: December 2023

Issued: February 2024

Professional Engineer Seal

The undersigned Professional Engineer and employee of CDM Smith attests that she is familiar with the requirements of the Arizona Pollutant Discharge Elimination System (AZDPES) Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activities No. AZMSGP2019-001 (MSGP); that she is familiar with the operations at Phoenix Sky Harbor International Airport subject to the MSGP; and that this SWPPP has been prepared in accordance with the requirements of the MGSP.

Engineer: Misti Burkman

Registration Number: 49294

State: Arizona

Signature:  Date: February 29, 2024

Electronic copy of the final document; sealed original document is with Misti Burkman, P.E. (registration No. 49294)

Section 1 Introduction

This Stormwater Pollution Prevention Plan (SWPPP) has been developed for the Phoenix Sky Harbor International Airport (PHX) in compliance with the requirements of Arizona Pollutant Discharge Elimination System (AZPDES) Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activities No. AZMSGP2019-001 (MSGP) released by the Arizona Department of Environmental Quality (ADEQ). The MSGP, effective January 1, 2020, and expiring December 31, 2024, is accessible at https://static.azdeq.gov/permits/azpdes/msgp_permit.pdf. The MSGP includes a modification effective September 29, 2021, that introduced and provided updates of definitions for protected surface waters, Waters of the United States (WOTUS), and non-WOTUS protected surface waters.

The operations at PHX are classified under Standard Industrial Classification (SIC) codes 4512 to 4581 for establishments primarily engaged in the transport of passengers or air freight via aircraft. Sector S of the MSGP is applicable to the facilities classified under these SIC codes and to those facilities on the property with stormwater drainage that mixes with stormwater from areas under the SIC code. Sector S requirements have been incorporated into this SWPPP.

For each permit term, the City of Phoenix Aviation Department (Aviation) and operators that perform MSGP-regulated industrial activities, known as co-permittees, are required to apply for coverage under the MSGP by submitting Notices of Intent (NOIs) through ADEQ's online portal known as myDEQ. Alternatively, No Exposure Certifications (NECs) or No Discharge Certification (NDC) may be submitted where applicable. The current NOI and NOI Authorization Certificate for Aviation is also included as **Appendix C**, as required by MSGP Part 5.6.

This comprehensive plan is implemented at PHX through the combined efforts of the City of Phoenix (COP), Aviation Stormwater Program Team, and the Pollution Prevention Team (PPT). This SWPPP replaces previous versions and has been updated to address current operations. This SWPPP has been developed to provide consistent and effective management of stormwater quality throughout PHX, in accordance with good engineering practices. The SWPPP is designed to:

1. Identify sources of pollution potentially affecting the quality of stormwater discharges associated with industrial activities that are covered under the MSGP;
2. Describe and ensure implementation of practices to minimize and control pollutants in stormwater discharges from these industrial activities; and
3. Ensure compliance with the terms and conditions of the MSGP.

1.1 Contents of the SWPPP

The SWPPP is generally organized and presented in a sequence consistent with SWPPP content requirements described in Part 5 of the MSGP, with related sections, incorporated as follows:

1. **Introduction:** Describes the purpose and applicability of the SWPPP and summarizes the structure of Aviation's Stormwater Pollution Prevention Program (Stormwater Program), (Parts 5.1, 8.S.3.3, and 8.S.6).

2. Pollution Prevention Team (PPT): Identifies the members of the PPT, describes their roles and responsibilities, defines co-permittees, and identifies the division of MSGP activities (Part 5.1.1).
3. Site Description: Provides a description of the site and the industrial activities that occur (Parts 5.1.1 and 8.S.6.1). This section also details the required information included as general and detailed maps (Part 5.1.1, 5.1.2 and 8.S.6.1).
4. Potential Pollutant Sources: Summarizes the industrial activities conducted and materials handled with exposure to stormwater (Parts 5.1.1 and 8.S.6.2).
5. Spills and Leaks: Identifies the history of significant spills or leaks and presents procedures for documenting spills and leaks (Part 5.1.1).
6. Non-Stormwater Discharges: Describes non-stormwater discharges and documents evaluations conducted (Parts 5.1.1, 1.1.3.1, and 2.2.1.2.9).
7. Control Measures (CMs): Provides a description of CMs installed and implemented (Parts 5.1.1, 2.1, 2.2.1 and 8.S.4) and details related schedules, practices, and procedures (Part 5.1.1).
8. Inspections: Details procedures for inspections (Parts 4.1, 5.1.1, and 8.S.6.1)
9. Stormwater Monitoring: Provides a description of outfalls and details procedures for monitoring (Parts 4.2 and 8.S.8). This section also documents non-applicability of certain sampling requirements (Part 5.1.1 and 6.1.5).
10. Reporting: Describes the procedures for Corrective Action and other non-compliance reporting (Part 3, 7 and Appendix B Subsection 12).
11. SWPPP Administration: Describes the requirements for signature and certification of permit-related documents and reports (Parts 5.1.1, 5.2 and Appendix B, Subsection 9). This section also discusses maintaining and recording of revisions to the SWPPP (Part 5.3), identifies the requirements for maintaining the plan such that it is available to Aviation, PPT members, co-permittees, agency personnel and the public (Part 5.4) and identifies the record retention period (Part 7.4)

1.2 Aviation's Stormwater Pollution Prevention Program

Aviation has implemented a Stormwater Program that is focused on achieving consistent implementation of stormwater pollution prevention measures airport wide. In general, Aviation has assumed the role of program administrator, led by the Stormwater Program Team. To effectively implement the program and reduce redundancy, Aviation implements certain MSGP requirements for the PPT, whereas some requirements are implemented by the PPT members themselves. Aviation coordinates MSGP activities with the PPT as well as consultants or others performing work on behalf of Aviation.

Each individual co-permittee remains responsible for ensuring all requirements of its own MSGP coverage are met regardless of whether this SWPPP allocates the implementation of MSGP requirements to Aviation. If Aviation does not implement an MSGP requirement on behalf of a co-permittee, it does not negate the co-permittee's ultimate liability.

Section 2 Pollution Prevention Team

2.1 PPT Membership

MSGP, Part 5.1.1 requires Aviation to establish a PPT. The PPT is structured to promote teamwork and idea sharing and to provide a platform for collaborative problem solving. The PPT is comprised of the roles identified in **Section 2.1.1**.

2.1.1 PPT Roles

Stormwater Program Team:

Aviation's Stormwater Program Team manages the Stormwater Program, assuming the roles of program administrator, co-permittee, and PPT member.

PPT Member:

PPT members are operators with facilities (i.e., activities, physical location, leasehold, and/or equipment) that qualify for inclusion in the Stormwater Program, based on the facility categories defined in **Section 2.1.2**.

PPT Member Representative:

Each PPT member must identify at least one employee to serve as their representative. Current PPT member representatives are identified in **Appendix D**. The representative should:

1. Have knowledge and experience of the PPT member facility relevant to the SWPPP;
2. Possess local knowledge and skills to assess conditions and activities that could impact stormwater quality at the facility, to evaluate the effectiveness of stormwater pollution CMs, and to participate in routine site inspections (RSI); and
3. Implement and maintain stormwater pollution CMs to prevent stormwater pollution and take corrective actions, as necessary.

2.1.2 PPT Member Categories

As differing requirements apply to PPT members based on the activities conducted at their facility and their potential to impact stormwater, this section defines PPT member categories, summarized in **Table 2-1**.

Table 2-1 PPT Member Categories				
Category	Stormwater Exposure	PPT Member	Co-permittee (Sector S)	ADEQ Authorization Type
Aviation (Program Administrator)	✓	✓	✓	NOI
Tier I	✓	✓	✓	NOI
Tier II		✓	✓	NEC
Tier III	✓	✓		N/A
Tier IV		✓		N/A

* The Stormwater Program Team may reevaluate PPT member's stormwater exposure and determine appropriate Tier.

Tier I PPT Member:

Companies that perform Sector S activities are included in the program as co-permittees and are known as Tier I PPT Members. Qualifying companies are required to obtain MSGP coverage for their facility by submitting an NOI through myDEQ, paying MSGP permit fees, conducting regular inspections, and maintaining documentation of the NOI and NOI Authorization Certificate.

Sector S facilities may include:

1. Air passenger and cargo companies;
2. Fixed-based operators (FBOs);
3. Aircraft, vehicle and equipment (AVE) wash companies;
4. AVE maintenance providers;
5. Owner/operator; and
6. Deicing operator.

Tier II PPT Member:

Companies that perform Sector S activities but have certified that there is no exposure of industrial materials or activities to precipitation or runoff, are included in the Stormwater Program as co-permittees and are known as Tier II PPT Members. The demonstration of "no

exposure” can only be made on a PPT member facility-wide basis and is not for individual outfalls or activities.

Qualifying companies are required to obtain permit coverage by submitting an NEC through myDEQ, paying MSGP permit fees, conducting regular self-inspections, and maintaining documentation of the NEC.

Tier III PPT Member:

Aviation requires companies that do not require permit coverage under Sector S of the MSGP but conduct activities that have the potential to impact stormwater, be included in the Stormwater Program as PPT members. These facilities include companies that handle chemicals and oils, store vehicles or equipment, have had a significant spill at the airport, and/or have other stormwater exposure as part of their business conducted at the airport. These facilities are not co-permittees, but are inspected as part of the Stormwater Program, are part of the PPT, and must comply with the requirements of the SWPPP, COP municipal separate storm sewer system (MS4) permit, and the MSGP.

Tier IV Member:

Tier IV PPT members include other companies, including non-Sector S companies, doing business at PHX who are not covered under Tiers I, II, and III. One example of a Tier IV PPT member would be an airline that subcontracts all Sector S activities that could impact stormwater quality to companies that maintain a Sector S NOI. Tier IV PPT members take annual stormwater training and contact the Stormwater Program Team if their activities change so they have stormwater exposure. These PPT members are encouraged to perform regular self-inspections.

2.2 PPT Member Responsibilities

Aviation’s primary responsibility, as the Stormwater Program Administrator, is to manage the Stormwater Program, whereas PPT members implement specific tasks. As a condition of agreements and obtaining access to do business, PPT members are required to comply with all applicable environmental rules and regulations, including securing coverage under the MSGP, if applicable. Each PPT member is responsible for ensuring all requirements of the MSGP are met regardless of whether this SWPPP allocates the actual implementation of responsibilities to Aviation or the PPT member. The responsibilities of each role are identified in **Appendix B**.

Recordkeeping Summary

To facilitate recordkeeping efforts, Aviation maintains a document repository known as the Aviation Stormwater Database (ASD) for internal documents, as well as a virtual notebook, accessible to PPT members, within which relevant documentation is stored. The virtual notebook includes information useful to PPT members regarding the program; however, PPT members are required to maintain documentation not located within the virtual notebook. **Appendix B** summarizes the responsibilities related to documentation.

Individual SWPPPs

PPT members may elect to develop their own SWPPP. However, it must be as stringent and must meet the requirements of this comprehensive SWPPP. **Table 2-2** lists PPT members with their own SWPPPs.

Table 2-2 PPT Members Facility SWPPPs	
PPT Members	
■	Transdev
■	United
■	UPS

2.3 PPT Member Communication

As Aviation conducts some activities on behalf of its PPT members, **Appendix B** lists these and describes methods for communicating results to PPT members and ensuring appropriate follow-up, as required by MSGP Part 8.S.3.3.

Section 3 Site Description

3.1 Site Activities

This section describes the site, including industrial activities conducted at PHX as required by MSGP Part 5.1.1.

PHX is primarily a commercial service airport. The airport was built in 1928 and has been operated by the COP since 1935. PHX has undergone several expansions since 1935 including ongoing upgrades. In 2021, PHX had approximately 408,285 flight operations annually (<https://www.skyharbor.com/About/Information/AirportFacts>). There are some private general aviation (GA) operators and commercial FBOs providing storage and aircraft maintenance services. PHX is also the location of the 161st Air Refueling Wing of the Arizona Air National Guard.

Industrial activities at PHX are described in **Section 4** and summarized as follows:

1. AVE Maintenance;
2. AVE Cleaning;
3. AVE Storage;
4. Material Storage Areas;
5. Airport Fuel System and Fueling Areas;
6. Building and Grounds Maintenance;
7. Recycling, Waste Handling and Disposal;
8. Lavatory and Potable Water Service;
9. Facility Construction/Renovation; and
10. Aircraft Deicing.

3.2 Site Layout

PHX is in south central Arizona, approximately two miles east of the central business district of the COP. Land use in the surrounding area consists of predominantly industrial and commercial property.

PHX is situated along the Salt River and encompasses approximately 2,450 acres. Approximately 75 percent of the site is covered by impervious surfaces, such as buildings, runways, taxiways, and parking lots. The pervious surfaces comprising the remainder of PHX are concentrated in the southern portion of the airport property, along the Salt River.

Stormwater drains through the stormwater drainage system to 18 outfalls along the Salt River. Most of the stormwater drainage system inlets drain airport property only. However, some of the stormwater drainage system, oriented north-south, is a continuation of the COP municipal separate storm sewer system (MS4).

The Salt River (located along the airport’s southern boundary) is the receiving water for stormwater discharges from PHX. The Salt River is a dry riverbed during most of the year except during periods of water release from the Granite Reef Dam, located upstream, irrigation releases, and during stormwater runoff events. PHX has approximately 20 feet of relief between the western and eastern boundaries of the airport, with a gradient of 8 feet per mile sloping to the west. Drainage basins connected to an extensive underground drainage system primarily collect surface runoff. Refer to A.R.S. 49-211(G) for protected surface water designation of the Salt River.

3.3 Site Maps

MSGP, Parts 5.1.1, 5.1.2 and 8.S.6.1 require inclusion of site maps with the SWPPP. **Figure 1**, identifies general location with the Salt River as the surface water receiving stormwater discharges from the site identified. To display detailed information on the site, **Figures 2, 3, and 4** were developed. **Figure 2** presents locations of industrial activity and potential pollutants. **Figure 3** shows the surface water and stormwater discharge locations from PHX. **Figure 4** presents locations where significant spills or leaks have occurred.

Table 3-1 identifies the figure that presents the data required in MSGP Parts 5.1.2 and 8.S.6.1.

Table 3-1 Site Maps	
Required Information	Figure Number
Boundaries of the property	1
Designation of area(s) associated with industrial activities	2
Identification of adjacent properties	2
Directions of stormwater flow for areas of the site that generate stormwater discharges with a reasonable potential to contain pollutants	2
Locations of stormwater conveyances including ditches, pipes and swales	2
Locations of major structural stormwater CMs	2
Locations of surface water receiving the site’s discharges	2
Locations of any special waters clearly labeled within 2.5 miles of the site	N/A
Locations where the site’s stormwater discharges to a regulated MS4	3
Locations where significant spills or leaks have occurred in the past three years	4
Locations of outfalls with a unique identification code for each feature	3
An approximate outline of the areas draining to each outfall	3
Identification of which outfalls are considered sampling points	3 – See also Section 9.1
Identification of which outfalls are being treated as substantially identical outfalls	N/A

Table 3-1 Site Maps	
Required Information	Figure Number
Locations of outfalls that are inactive or no longer used as outfalls, if practicable	N/A
Identification of all outfalls that include allowable non-stormwater discharges under MSGP Part 1.1.3	3 – Applicable to all outfalls
Location of on-site drywell(s) and their registration number(s)	2
Sources of run-on to the site from adjacent property that may contain pollutants	3
Locations of following activities and features that are exposed to stormwater with the potential to discharge pollutants, including but not limited to: <ol style="list-style-type: none"> 1. Fueling stations; 2. AVE maintenance and/or cleaning areas; 3. Loading/unloading areas; 4. Locations used for the treatment, storage, or disposal of wastes; 5. Liquid storage tanks; 6. Processing/storage areas; 7. Transfer areas for bulk materials; 8. Access roads/rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the site; 9. Aircraft and runway deicing operations; and 10. Storage areas for AVE awaiting maintenance. 	2

There are PPT members subject to MSGP requirements that are not identified in **Figure 2**. These mobile service providers conduct operations without an on-site facility and include wash service providers (WSPs) and refuelers. While they conduct Sector S specific industrial activities at PHX, the place of business is located off site.

Section 4 Potential Pollutant Sources

4.1 Activities in the Area

MSGP Part 5.1.1 and Part 8.S.6.2 requires the SWPPP include a summary of potential pollutant sources. The activities with the potential to discharge pollutants to stormwater are described below. The potential for discharges takes into consideration CMs that are in place for each activity. The CMs for each activity are discussed in **Section 7** with details provided in **Appendix A**. In addition to CMs for these activities, facility-wide CMs associated with good housekeeping have been developed that are not associated with a specific industrial activity.

Appendix E identifies the industrial activities conducted by the PPT. **Figure 2** identifies the specific areas where industrial materials or activities may be exposed to stormwater.

4.1.1 Aircraft, Ground Vehicle & Equipment Maintenance

Activities:

The majority of the PPT members maintain aircraft, equipment and/or vehicles. Maintenance activities are performed both indoors and outdoors. PPT members who have hangars large enough to accommodate aircraft generally perform aircraft maintenance indoors. The remaining PPT members perform aircraft maintenance in designated paved areas. Vehicle and ground support equipment (GSE) maintenance is performed inside maintenance bays or in designated paved areas. The rental car companies at the Rental Car Center (RCC) conduct light vehicle maintenance. Most of this maintenance is conducted inside contained maintenance bays.

All PPT members collect and dispose of their own waste materials. Aviation provides accumulation sites for GA use only. The accumulation sites are for the collection of used oils and waste solvents for disposal or recycling.

Pollution Source Potential:

Low – In compliance with the CMs, AVE maintenance activities represent a low potential for significant pollutant discharge. Additionally, there is a low potential for pollutant discharge to the stormwater drain system from the floor drains at the listed facilities due to adherence to the CMs.

4.1.2 Aircraft, Ground Vehicle & Equipment Cleaning

Activities:

Many PPT members perform cleaning activities, which include AVE washing and equipment degreasing. Most PPT members conducting AVE washing do so at designated wash racks. The wash racks' oil water separators (OWSs) discharge to the COP sanitary sewer system.

When washing must be performed outside of such facilities for large aircraft, nearby stormwater drains are covered to prevent discharge and wash water is recovered using a vacuum sweeper/scrubber or other method. The collected wash water is discharged to the COP sanitary sewer via an OWS.

WSPs perform AVE washing and are required to submit a written wash plan to Aviation for approval. The wash plan identifies wash areas, location of nearby stormwater drains, water retrieval process, water disposal method, list of products and other additional information. Wash plans must be revised and resubmitted every 3 years. Detailed wash plan requirements are in **Appendix U**. WSPs are identified on Figure 2.

To minimize potential for pollutant discharges from washing activities, many PPT members use dry-washing methods. PPT members using dry-washing methods are still required to submit a wash plan and protect stormwater drain inlets during washing activities.

Runoff from non-recycled water facilities is routed to the COP sanitary sewer system. An exception is the Arizona Fueling Facilities Corporation (AFFC), a fueling facility owned by a consortium of major air carriers. At AFFC, runoff from vehicle washing is discharged to an aboveground OWS. Wash water is then routed to an oily water recovery tank which discharges to an above ground evaporation pond where most of the wash water evaporates. Approximately 3-4 times per year, wash water will go through carbon filtration before discharging to the sanitary sewer.

The discharge of vehicle and equipment wash water is not authorized under MSGP. MSGP Part 2.2.1.2.9 requires wastewaters to be covered under a separate AZPDES permit, discharged to a sanitary sewer in accordance with applicable industrial pretreatment requirements, or disposed of otherwise in accordance with applicable laws.

Parts cleaners for equipment degreasing are located inside various hangars where they are not exposed to stormwater. These must be kept inside or undercover where they are not exposed to stormwater.

Pollution Source Potential:

Moderate – Cleaning activities represent a moderate source of non-stormwater discharges to the stormwater drain system due to Aviation’s requirements that:

1. Washing activities are to be conducted at a designed wash rack or location(s) approved of in WSP-specific wash plan;
2. Wash water be collected and properly disposed to the COP sanitary sewer; and
3. A WSP must have an approved wash plan be in place prior to initiating washing activities.

4.1.3 Aircraft, Ground Vehicle & Equipment Storage

Activities:

The majority of the PPT members have AVE stored for short periods of time at the airport. For long-term storage of AVE, Aviation requires PPT members to drain fluids to minimize the possibility of releases. Long-term storage is considered storage for more than 30 days.

Repaired equipment and equipment awaiting repair, salvage, or demolition are stored short-term in designated areas located at GSE maintenance areas. Most of the PPT also have

designated areas where vehicles and equipment (i.e., tugs, lavatory carts, etc.) are stored short-term when they are not being used.

Additionally, some of the PPT members are required to store damaged aircraft or vehicles on their properties. These AVE cannot be moved due to insurance requirements. However, PPT members are required to employ and properly maintain, as appropriate, CMs such as drip pans for these aircraft and vehicles.

Pollution Source Potential:

Moderate – Storage activities represent a moderate potential source of stormwater pollution. During rain events, residues (e.g., fuel, oil, grease) on the equipment under repair or residuals from spills or leaks from the stored AVE could be a source of potential pollutants in stormwater discharges.

4.1.4 Material Storage Areas

Activities:

Many PPT members have indoor and outdoor material storage areas. Chemicals, cleaning products, new oil, and used oil are typically stored in 55-gallon or smaller containers. Paint, liquid soap, and glycol-based deicing fluid are stored in 250-gallon totes or smaller containers. Fuel is typically stored in aboveground or underground storage tanks (ASTs or USTs).

PPT members are required to use secondary containment in material storage areas with potential exposure to stormwater. Outdoor storage areas have the greatest potential to impact stormwater therefore Aviation encourages use of a storm-resistant cover. PPT members without a leasehold on airport property, (such as WSPs or those who maintain aircraft and equipment at satellite locations) may transport chemicals, cleaning products, new oil, and used oil in less than 55-gallon capacity containers. These small quantities of oil and chemicals are stored inside the PPT member's vehicle and inside totes which act as secondary containment.

Pollution Source Potential:

Moderate – Outdoor material storage areas and chemical storage areas located near doorways represent a moderate potential source of stormwater pollution.

4.1.5 Airport Fuel Systems and Fueling Areas

Activities:

Aircraft and/or vehicle fueling is necessary to the operations of most PPT members. Aircraft fueling activities are conducted only on paved surfaces such as concrete ramps or at the gates. Aircraft fueling is performed from mobile refueling vehicles or directly from the subsurface fuel hydrant system. Most vehicle and GSE fueling is conducted at the gates with mobile refuelers or at the Swissport-operated fueling station. Rental car companies at the RCC operate numerous fuel stations for vehicles.

Fuel spills are contained promptly through use of absorbent materials or other CMs. PPT members are required to provide spill kits and spill response plans in PPT-owned or leased fueling areas. As a supplement to PPT member supplied materials, Aviation maintains spill kits

and spill response plans at gates, accumulation sites, and certain storage locations at PHX for emergency use in containing spills. Aviation enforces Rule and Regulation 01-01, “Fuel Release and Releases of Other Regulated Substances” (**Appendix F**) which was developed to comply with COP City Code Chapter V, Article IV, Section 4-116 “Compliance with environmental laws.” and Section 4-117 “Environmental actions.” In addition to prompt spill response, all spills are to be immediately reported to the airport authorities. If a release has entered a storm drain, sanitary sewer, or soil, then reports must be made to the ADEQ and National Response Center (NRC).

Fuel is stored in both ASTs and USTs. There are significant fuel storage areas at the Arizona Air National Guard Base, the AFFC, and at the Executive Terminal Fuel Farm that Swissport leases from Aviation. Additionally, FBOs, such as Cutter and Jackson Jet Center, operate ASTs to service their equipment and clients. Fueling service providers are required to equip refuelers with spill kits and spill response plans.

Pollution Source Potential:

Significant/Moderate – Aircraft and vehicle fueling activities represent a significant potential impact to stormwater. Storage and transportation of AVE fuel represents a moderate potential source of stormwater pollution. Leaks from fuel transfers that are not immediately cleaned have the greatest potential to impact stormwater.

4.1.6 Building and Grounds Maintenance

Activities:

PPT members perform activities throughout PHX to maintain clean indoor and outdoor areas. Aviation performs apron cleaning with vacuum sweeper/scrubber in most areas. Wastewater from this activity is disposed of through OWSs routed to the COP sanitary sewer system. Many of the PPT members and/or their contractors conduct floor washing at their facilities and wash water is discharged to OWSs or directly to the COP sanitary sewer system.

Aviation personnel, licensed by the Arizona Office of Pest Management (OPM), perform herbicide application at Aviation facilities. Their chemicals are stored on-site in a designated storage area.

A small number of PPT members contract a service provider for application of pesticides (service providers must be approved by the OPM). Contractor applied products are generally used in small quantities and are not stored on-site.

Pollution Source Potential:

Low – In compliance with the CMs, outdoor apron and floor-washing activities do not represent a significant source of non-stormwater discharges to the stormwater drain system. Overall, building and ground maintenance activities represent a low potential source of stormwater pollution. During rainfall events, pesticide and herbicide residuals at application sites may be washed into the stormwater drain system. However, the use of pesticides and herbicides at the airport does not result in significant discharges to the land surface.

4.1.7 Recycling, Waste Handling and Disposal

Activities:

Most of the PPT members manage solid wastes, universal waste, and used oil. Solid wastes must be containerized, and storage areas are required to be kept clean of trash and debris. Wastes must be collected regularly to prevent excessive accumulation. Used oil, used batteries, and used light bulbs must be stored inside or under cover and with secondary containment if outside.

Aviation and several PPT facilities dispose of regulated hazardous wastes according to applicable regulations. Aviation and the individual PPT facilities are registered with ADEQ for hazardous waste disposal and follow proper disposal procedures. Aviation provides accumulation sites for private aircraft owners for used oil and waste solvents to ensure proper disposal. These sites are maintained under cover and with containment to prevent stormwater exposure.

Pollution Source Potential:

Significant – Based on the widespread nature of this industrial activity, there is significant potential impact to stormwater quality. Uncontained debris that is not immediately collected has the greatest potential to impact stormwater.

4.1.8 Lavatory and Potable Water Service

Activities:

Aircraft lavatories are serviced with lavatory carts by airline operators or service operators on the apron. The main pollutant associated with this service is lavatory waste. Swissport operates a triturator for the disposal of aircraft lavatory waste. Lavatory cart users are required to keep the triturator area clean and all lavatory service equipment in good working order.

Aircraft potable water tank disinfection must be performed in designated areas only. Aircraft potable water maintenance discharges containing disinfection products must be discharged to the sanitary sewer via an OWS.

Potable water hose line flushing from the water cabinets located at the gates may be discharged to a nearby stormwater drain or allowed to evaporate.

Pollution Source Potential:

Moderate – Based on the frequency of lavatory and potable water service, these activities represent a moderate potential impact to stormwater quality.

4.1.9 Facility Construction/Renovation

Activities:

PPT members are required to obtain construction and renovation project approval through Aviation's Tenant Improvement (TI) program and to comply with all federal, state, and local regulations, especially the CGP. Through the TI program, Aviation will provide review of construction projects activities to observe whether CGP requirements are followed. If a construction project is not required to obtain an CGP, the City MS4 permit requires the

construction project on Aviation property complies with Aviation's SWPPP, the state MSGP and the City's MS4 permit.

Aviation has regular construction projects at PHX and follows all federal, state, and local regulations including CGP coverage as required.

Pollution Source Potential:

Significant – Due to the size, duration, and amount of on-going construction projects, these activities represent a significant potential impact to stormwater quality.

4.1.10 Aircraft Deicing

Activities:

The PHX deicing season is November through February but may be extended if required due to weather conditions. Glycol-based deicing fluids are used on aircraft to eliminate or prevent ice build-up on the wings and fuselage of aircraft during cold weather conditions at PHX. In general, this activity is performed by only three PPT members. On average total deicing fluid use at PHX is less than 3,000 gallons annually.

Due to the relatively mild and dry winter weather conditions, ice formation on aircraft is infrequent and generally minimal. Anti-icing is conducted to prevent ice from forming on the exterior aircraft surfaces at higher altitudes and is more commonly performed than de-icing. Airlines use propylene glycol-based deicing fluids diluted at varying concentrations. Some airlines, such as Delta Airlines, push their planes back from the gates into the sun for frost to thaw. De-icing is typically at the request of the aircraft's pilot.

The deicing fluids are typically stored in drums or totes. Deicing activities are conducted in designated paved areas at the gates. Deicing fluid is generally applied by spraying the aircraft with a mixture of hot water and a glycol-based fluid. Any over-spray from the aircraft onto the apron area is removed by vacuum sweeper/scrubbers afterwards and discharged appropriately.

Empire Airlines services Tecalemit-Kilfrost-Sheepbridge Stokes (TKS) systems using TKS fluid containing 85-95% ethylene glycol, 0-10% water, and 0-5% isopropanol. These aircraft systems discharge the deicing agent from the wings during flight. During TKS system filling operations, residual TKS fluid is collected from the ground using water, a vacuum and absorbent pads.

Pollution Source Potential:

Low – Based on the infrequent occurrence of icy weather conditions, the low volumes of deicing fluid used per event, and the effective use of CMs, deicing is a low source of potential non-stormwater discharge to the stormwater drain system.

Section 5 Spills and Leaks

5.1 List of Significant Spills

The MSGP (Part 5.1.1) requires the SWPPP to include a list of significant spills and leaks of pollutants that occurred in the three years prior to the latest revision of this SWPPP. Significant spills and leaks include, but are not limited to, release of oil or hazardous substances in excess of quantities that are reportable under Section 311 of the Clean Water Act (CWA) or Section 102 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

Significant spills or leaks are documented and maintained in the ASD and with the SWPPP in **Appendix G** and locations are shown on **Figure 4**. Spill record documentation includes a descriptions of the incident, the circumstances leading up to the release and response measures taken to prevent the recurrence of such releases.

5.2 Spill Response

There is potential for spills and leaks to occur in the areas where pollutants are stored, used, or could otherwise come into contact with stormwater as identified in **Figure 2**. Aviation has an effective spill response program that includes a spill response plan (**Appendix H**) and Aviation's Rule and Regulation 01-01 for Fuel Releases and Releases of Other Regulated Substances (**Appendix F**) and Rule and Regulation 01-02 for Stormwater Enforcement (**Appendix I**). These rules establish the procedures for immediate spill reporting to airport authorities, response, clean up, documentation, and subsequent notifications to agencies associated with water quality regulation and with releases of fuel and other regulated substances.

PPT members are required to address spills of fuels and other pollutants in accordance with Aviation's Rule and Regulation 01-01 for Fuel Releases and Releases of Other Regulated Substances (**Appendix F**). When a release occurs, the responsible party will immediately notify airport authorities with location, substance released, approximate size of the release and any other pertinent information (per Spill Response Plan, **Appendix H**). If the release is threatening structures, stormwater or sanitary sewers, or soil, the reporting party will dike the leading edge of the release with an approved absorbent material or device or take other preventative measures. If a release has entered a storm drain, sanitary sewer, or soil, then reports must also be made to the ADEQ and NRC and reporting may be required to the jurisdiction with the MS4 Permit.

The reporting party will remain in a safe location near the release site and will report to Aviation and Fire Department representatives upon arrival. Aviation and Fire Department units will respond and may establish "Command." Upon approval of Command, the responsible party may begin clean-up and appropriately dispose of waste. Spill kits have been strategically placed around PHX to assist in diking a release. The PPT member may need to arrange for a certified response contractor to address the spill or provide spill clean-up services to clean up the area to the condition prior to the release. Aviation may assist, as available, with application of absorbent materials, collection of used absorbent, and sweeping the area with a vacuum sweeper/scrubber. If clean-up activities by the responsible party are not adequate or additional resources are needed quickly, Aviation may engage a spill response contractor to ensure proper

containment and clean up. Aviation may bill the responsible party to recover costs incurred. After each occurrence, the cause of the spill and responsible party are identified. Aviation will review the available facts and may issue an Aviation Stormwater Notice of Violation (NOV) per Rule and Regulation 01-02 for Stormwater Enforcement (**Appendix I**).

If the release meets the requirements of MSGP Part 3.1.1 corrective action reporting may be required as defined in **Section 10**.

Section 6 Non-Stormwater Discharges

6.1 Allowable Non-Stormwater Discharges

This section identifies existing allowable non-stormwater discharges to the site stormwater drainage system per MSGP Part 1.1.3.1 and the measures to eliminate them, if possible, per MSGP Part 2.2.1.2.9. Except for certain allowable non-stormwater discharges, the SWPPP ensures that non-stormwater discharges are not commingled with site stormwater. Due to the nature of the operations, allowable non-stormwater discharges may be present in all drainage areas and outfalls at the site.

1. *Emergency/unplanned fire-fighting activities;*

Fire-fighting activities and emergency preparedness per federal regulations, 49 CFR Part 139 (Airport Certification), and City Code, referencing National Fire Protection Association (NFPA) 409 Standard on Aircraft Hangars, are performed to preserve life and property. Potable water is used when suitable and fire suppression products, such as Aqueous Film Forming Foam (AFFF), are used as required by federal, state, and local regulations. After the risk of fire has been addressed and the COP Fire Department has transferred command of the site to Aviation, CMs are used to the extent practicable to filter debris from the water or other fire suppression material used. If AFFF was used and it is judged safe to do so, Aviation will recover the fire suppression material for off-site treatment or disposal.

2. *Fire-fighting system testing and maintenance, including fire hydrant flushing;*

Fire-fighting system testing and maintenance at PHX occurs as required by federal, state, and local regulations. CMs are used to the extent practicable to recover, contain, dispose or filter water or other fire suppression materials.

3. *Installation and maintenance of potable water supply systems, including disinfection and water line flushing activities, discharges resulting from pressure releases or overflows, and discharges from wells approved by ADEQ for drinking water use;*

PHX has many renovation and construction projects, which require upgrades to, and installation of, new potable water lines. Discharges due to testing and disinfection of the potable water system are minimized. CMs are used to prevent water, that has come in contact with pollutants or contains chemicals, from entering the stormwater drain system.

4. *Uncontaminated condensate from air conditioners, evaporative coolers, and other compressors and from the outside storage of refrigerated gases or liquids;*

Discharges of uncontaminated condensate from air conditioners and water from other compressors may occur. Areas around drains are kept clean to prevent condensate from contacting pollutants.

5. *Irrigation drainage and irrigation line flushing;*

Discharges due to testing and flushing of the irrigation system are minimized. CMs are used to prevent water that has come in contact with pollutants or contains chemicals from entering the stormwater drain system.

6. *Landscape watering provided all pesticides, herbicides, and fertilizers have been applied in accordance with the approved labeling;*
PHX has installed desert landscaping to minimize water use. Pesticides and herbicides are applied per manufacturer specifications and in limited quantities in areas subject to landscape watering.
7. *Pavement wash waters where no detergent or cleaning agents are used, and measures are first taken to remove/pickup solids and liquids, and properly disposed;*
Pavement is cleaned using a vacuum sweeper/scrubber and/or power washing without the addition of cleaning agents. Water from power washing is recovered using a vacuum sweeper/scrubber. Water from the vacuum sweeper/scrubber is discharged to an OWS.
8. *Routine external building wash down / power wash water that does not use detergents or hazardous cleaning agents (e.g., those containing bleach, hydrofluoric acid, muriatic acid, sodium hydroxide, nonylphenols);*
External building wash down is not permitted.
9. *Water used to control dust, provided effluent or other wastewaters are not used;*
During construction, maintenance, and other activities with the potential to create fugitive dust, potable water may be applied for dust suppression.
10. *Uncontaminated groundwater or spring water;*
There are no groundwater or spring water discharges.
11. *Foundation or footing drains where flows are not contaminated with process materials such as solvents;*
No foundation or footing drains are routed to the stormwater drain system.
12. *Incidental windblown mist from cooling towers that collect on rooftops or adjacent portions of the site, but not intentional discharges from cool towers (e.g., "piped" cooling tower blowdown or drains);*
Intentional discharges from cooling towers are not permitted.
13. *Hydrostatic testing of new pipes, tanks or vessels using potable water, surface water, or uncontaminated groundwater;*
PHX renovation and construction projects may require hydrostatic testing of pipes, tanks or vessels (i.e., fuel hydrant pit). Discharge from these activities is minimized. CMs are used to prevent water that has come in contact with pollutants or contains chemicals from entering the stormwater drain system.
14. *Discharges of water associated with drilling, rehabilitation, and maintenance of potable or non-potable water wells and piezometers, or water supply or water quality evaluations including:*
 - a. *Discharges from any borehole not fully developed;*
 - b. *Well purging;*
 - c. *Well/aquifer pump tests not associated with groundwater remediation activities; and*
 - d. *Backflushing of injection wells.*No potable or non-potable water wells or piezometers are present at PHX.

15. Non-stormwater discharges subject to an effluent limitation guideline listed in MSGP Table 2-2.

Discharge with urea from pavement deicing does not occur therefore MSGP Table 2-2 Sector S effluent guidelines are not applicable to PHX.

6.2 Unauthorized Non-Stormwater Discharges

All non-stormwater discharges other than those listed in **Section 6.1** are considered unauthorized. Per MSGP Part 2.2.1.2.9, the site must evaluate the presence of, and eliminate, unauthorized non-stormwater discharges.

The outfalls covered under this SWPPP have been evaluated for the presence of non-stormwater discharges. Evaluations are performed through inspections of the facility's stormwater drainage systems on a quarterly basis as part of the Outfall RSIs, as described in **Section 9.3** and the Outfall Visual Assessments of stormwater discharges as described in **Section 9.2**. Additionally, PPT members and Aviation perform stormwater self-inspections, at least monthly, on-site to identify and eliminate any unauthorized non-stormwater discharges.

Parts of the stormwater drain system are a continuation of COP MS4 components located along 24th, 32nd, 40th, and 44th Streets. There is a potential for unauthorized non-stormwater discharges from off-site to enter the stormwater drain system through these drainage ways.

If an unauthorized non-stormwater discharge is identified, Aviation or the responsible PPT member (Tier I or Tier II) will follow reporting requirements in **Section 10.2** for Corrective Actions.

Section 7 Control Measures

Stormwater pollution prevention CMs include the identification of targeted activities and their corresponding pollutants, spill response procedures, and other management practices that prevent or reduce the discharge of pollutants to Waters of the United States.

7.1 Selection

MSGP Part 2.2.1.1 requires that the type and quantity of pollutants likely to be discharged in stormwater or allowable non-stormwater from the site are assessed. The following must be considered when designing and utilizing CMs:

1. Preventing stormwater pollution is generally more effective and less expensive than trying to remove pollutants from stormwater;
2. Using multiple CMs is more effective than using just one CM for minimizing pollutants in stormwater;
3. Minimizing impervious, or paved, areas on-site can allow more stormwater to absorb into the ground and reduce the amount of stormwater runoff. Although, groundwater contamination must be avoided;
4. Reducing stormwater flow rates using open vegetated swales and natural depressions can reduce impacts of erosive flows;
5. Using containment to hold stormwater, such as pits, detention basins or runoff containment, before discharging off site;
6. Conserving and/or restoring of vegetation alongside streams help protect streams from stormwater runoff and improve water quality; and
7. Using treatment interceptors may be appropriate in some cases to minimize the discharge of pollutants.

Aviation has developed CMs based on the requirements and guidelines of the MSGP Part 2.2.1 and specific operational requirements that address pollutants originating from regulated activities. Aviation has taken into consideration the quantity and nature of the pollutants and their potential to impact the water quality of the receiving waters in selection of CMs.

7.2 Implementation

MSGP Part 2.2.1.2 lists specific structural and non-structural types of CMs that must be considered for implementation including the following general categories:

- | | |
|----------------------------------|--|
| 1. Minimize Exposure | 7. Salt Storage |
| 2. Good Housekeeping | 8. Employee Training |
| 3. Maintenance | 9. Non-Stormwater Discharges |
| 4. Spill Prevention and Response | 10. Dust Generation and Vehicle Tracking of Industrial Materials |
| 5. Erosion and Sediment Control | 11. Sector Specific Control Measures |
| 6. Management of Runoff | |

Appendix A contains CMs for the industrial activities listed in **Section 5**, and a general CM category that applies site-wide. These CMs are used by PPT members and are based on the requirements of the MSGP and Aviation-specific operational requirements. Because not all of the PPT members conduct all of the industrial activities described in Section 5, Aviation has organized CMs by industrial activity. This organization allows PPT members to locate and utilize the CMs that apply to their activities.

Each activity-specific CM lists the targeted sub-activities, targeted pollutants, specific procedures addressing the CM categories listed above, and record keeping/reporting requirements. Additionally, stormwater pollution prevention considerations for the design of new facilities or upgrades to existing facilities are included.

Some CM categories do not apply or are covered under good housekeeping requirements as described below:

Salt Storage: Salt storage is not conducted, so no specific CMs have been developed for this category.

Sediment and Erosion Control: MSGP requires that the SWPPP identify areas with a potential for significant soil erosion due to topography, land disturbance (e.g., construction) or other factors, and the structural, vegetative, and/or stabilization CMs that will be used to limit erosion.

There are no topographic or other factors that would create sedimentation or erosion issues. Soil erosion potential is typically limited to land disturbance due to construction. PHX facilities are frequently subject to construction projects. Due to the relatively continuous and changing nature of construction projects, it is difficult to accurately account for all disturbed areas and the associated sediment and erosion CMs in this SWPPP.

Construction projects follow the requirements identified in **Section 4.1.9** including CM 10 – Facility Construction and Renovation. Under AZPDES CGP, construction projects greater than one (1) acre must prepare and file a Construction General Permit NOI and implement a construction SWPPP. The construction SWPPPs describe the structural, vegetative, and/or stabilization measures that will be implemented to limit erosion or sedimentation. A current listing of construction projects is maintained by Aviation.

Dust Generation and Vehicle Tracking of Industrial Materials: As stated above for sediment and erosion control, dust generation and vehicle tracking potential is limited to land disturbance due to construction. The areas listed above are likely subject to dust generation and vehicle tracking.

Additionally, most Aviation construction or other projects are required to comply with Maricopa County fugitive dust requirements and the AZPDES CGP. Maricopa County requires that earth moving projects greater than 1/10 acre obtain an earth-moving permit and implement a fugitive dust control plan.

CMs for dust generation are included in CM 10 – Facility Construction and Renovation.

OWSs & Stormceptors: Washing activities are typically conducted in designated wash areas equipped with an OWS. Collected wash water flows through an OWS before discharging to the sanitary sewer system.

1. There are a few OWSs that are connected to the stormwater drain system:
2. Salt River Project and Arizona Department of Public Safety have an OWS that discharges to the stormwater drain system.

Stormceptors, designed to separate oils and sediment from stormwater are also utilized at PHX in the following locations:

1. Two Stormceptors are located South of Terminal 3 South, they receive flow from trench drains located near the gates.
2. One Stormceptor is located North of Terminal 3 South and receives flow from roof drains, baggage handling area, and T3 South Sky Train station.
3. Two Stormceptors are located at Terminal 3 North, one of which receives flow from trench drains located near the gates and the other receives flow from roof drains.
4. One Stormceptors is located at Terminal 4, Concourse S1, which receive flow from trench drains located near the gates.
5. The West Air Cargo loading docks have a Stormceptor that discharges to the stormwater drain system.

7.3 Services Provided by Aviation

Aviation provides services and facilities to PPT members specifically to minimize non-stormwater pollution discharges as described below. Wash racks installed by Aviation for cleaning small aircraft, vehicles and equipment, are provided to minimize the impact of cleaning activities to stormwater by diverting these non-stormwater pollution discharges to the sanitary sewer system. Permission to conduct aircraft washing at an alternate location on the airport property is granted only after approval.

Photo 7-1: PHX Wash Rack

Aviation provides accumulation areas for private aircraft owners to ensure proper disposal or recycling of used oil and waste solvent. Accumulation sites consist of clearly marked containers provided for proper disposal.

PPT members are required to address spills of fuels and other pollutants in accordance with Aviation’s Rule and Regulation 01-01 for Fuel Release and Releases of Other Regulated Substances (**Appendix F**). Rule and Regulation 01-01, “Fuel Release and Releases of Other Regulated Substances” was developed to comply with COP City Code Chapter V, Article IV, Section 4-116 “Compliance with environmental laws.” and Section 4-117 “Environmental actions.” In addition to prompt spill response, all spills are to be immediately reported to the airport authorities. If a release has entered a storm drain, sanitary sewer, or soil, then reports must be made to the ADEQ and NRC.

Photo 7-2: PHX Accumulation Site

Spill kits have been strategically placed around PHX by Aviation to assist PPT members to respond to a release. These spill kits are stocked with spill response materials, such as mats and granular absorbents, and are restocked by Aviation as needed.

Aviation may assist, as available, with application of absorbent materials, collection of used absorbent, and sweeping the area with a vacuum sweeper/scrubber. Per Aviation’s Rule and Regulation 01-01 for Fuel Releases and Releases of Other Regulated Substances (**Appendix F**), Aviation may be available to provide clean up services for the cost of labor, equipment and supplies utilized. The PPT member may need to provide a certified response contractor. If clean-up activities by the responsible party are not adequate or additional resources are needed quickly, Aviation may engage a spill response contractor to ensure proper containment and clean up to conditions prior to the release and charge the responsible party. After each occurrence, the cause of the spill and responsible party are identified. Aviation will review the available facts and may issue an Aviation Stormwater NOV per Rule and Regulation 01-02 for Stormwater Enforcement (**Appendix I**).

7.4 Schedule, Practices and Procedures

This section identifies the schedule, practices and procedures related to the CMs.

7.4.1 Control Measures Maintenance

MSGP Part 2.2.1.2.3 requires that CMs identified in the SWPPP are maintained in effective operating condition. When a CM that is not operating effectively is discovered, maintenance must be performed within 14 days or prior to the next measurable stormwater event, whichever is sooner.

PPT Member-owned Control Measures:

Regular inspection and maintenance of PPT member-owned CMs, such as spill kits, structural covers and OWSs, are the responsibility of the PPT member. As required by MSGP Part 5.6 documentation of maintenance and repairs of structural CMs is required, including:

1. Dates of regular maintenance
2. Dates of discovery of CMs in need of repair/replacement;
3. Dates that structural CMs returned to full function; and
4. Justification for any extended repair schedules

OWSs must be visually inspected on a regular basis and pumped out on a scheduled basis or as necessary whichever is sooner. Records of maintenance and inspection for these structures are required. Based on the types of discharge to the OWS, PPT members with City of Phoenix Wastewater Discharge permit may be required to sample the material to be pumped for waste profiling to ensure it is properly manifested, transported, and disposed.

PPT members are required to complete monthly self-inspections as described in **Section 8.2** and retain documentation of their inspections with their SWPPP documentation.

Aviation conducts quarterly RSIs of PPT members' facilities (see **Section 8.1**) to meet the inspection requirements in the MSGP Part 4.1 and to verify maintenance of PPT member-owned CMs. CM maintenance deficiencies identified during those inspections are discussed with the PPT members at the time of the inspection, documented in writing to the PPT member, and tracked with other findings and corrections as discussed in **Section 8.1**.

Aviation-owned Control Measures:

Aviation is responsible for infrastructure (i.e., culverts, stormwater drains and outfalls) and Aviation-owned structural CMs (i.e., OWSs and spill kits). Aviation performs maintenance on CMs including restocking spill kits, as necessary. PPT members request service from Aviation regarding Aviation-owned CMs.

Aviation uses vacuum sweeper/scrubbers to clean the airfield and parking lots daily to prevent foreign object debris (FOD) and trash accumulation.

Aviation collects and recycles used oil and disposes of the waste solvents at the accumulation sites. Aviation inspects accumulation sites weekly. Aviation inspects, profiles, pumps, and disposes of waste from the OWSs.

7.4.2 Spill Prevention and Response Procedures

MSGP Part 2.2.1.2.4 requires procedures for preventing and responding to spills and leaks. The Aviation spill response plan is provided to PPT members and others conducting industrial activities. The spill response plan is included in **Appendix H**.

As required by MSGP Part 5.6, spill records are documented and maintained with the SWPPP in **Appendix G** and in the ASD. Spill records include a description of the unauthorized discharge, the circumstances leading up to the release and the measures taken to prevent the recurrence of a release.

PPT facilities subject to SPCC requirements develop and maintain an SPCC Plan for each facility. These plans must be provided to Aviation for upload to the ASD. These PPT facilities are required to provide Aviation with an annual certification letter stating that they have reviewed

their SPCC plan and will make updates, if necessary. The certification form is maintained on the virtual notebook and included in **Appendix J**.

7.4.3 Training

Employee training on the requirements of the MSGP and SWPPP provisions is required by MSGP Part 2.2.1.2.8. The following are required to receive training:

1. All PPT members;
2. Individuals who work in areas where industrial materials or activities are exposed to stormwater; and
3. Individuals responsible for implementing activities necessary to meet the conditions of the MSGP (e.g., inspectors, maintenance personnel).

The following components are required to be included:

1. An overview of the SWPPP;
2. Spill response procedures, good housekeeping, maintenance requirements, and material management practices;
3. The location of all controls on the site required by this permit, and how they are to be maintained;
4. The proper procedures to follow with respect to the permit's pollution prevention requirements; and
5. When and how to conduct inspections, record applicable findings, and take corrective actions

Train-the-Trainer Session:

Aviation provides an annual train-the-trainer session for PPT members online. Aviation reserves the option to provide in-person training sessions in addition to the online class. The training covers the required components, except for all locations of controls on-site, as many of these controls are specific to the PPT member areas; however, the training describes the general airport-maintained controls. PPT member representatives are notified by e-mail and/or phone of the training date(s) and location. Aviation's training attendance is tracked and uploaded to the virtual notebook.

PPT Member Employee Training:

On an annual basis, PPT members are expected to provide training that covers the required components to their employees that meet the criteria above. To support this training, Aviation developed an online stormwater training program. Aviation will invite PPT members to take the online training and print individual Certificates of Completion to document training was completed.

Aviation encourages PPT members to utilize the Aviation online when training their employees. PPT members must provide Aviation with the name and emails of all employees that require this training. If the online training is not used, PPT members' employee training must contain the same material covered in Aviation's online training and PPT members must provide Aviation with a copy of the training used.

PPT members are to document attendance and maintain records on file. Employee training attendance is verified during RSIs described in **Section 8.1**.

Section 8 Inspections

8.1 Quarterly Routine Site Inspections

As required by MSGP Part 4.1, Aviation conducts routine site inspections of PPT member facilities once per calendar quarter, accompanied by a PPT member representative. RSIs may be conducted by PPT members with prior approval from Aviation. **Appendix K** includes a guidance document for PPT member conducted RSIs. At least one of the RSIs each year is conducted while stormwater discharge is occurring on-site, when feasible. This “wet” inspection may be performed by Aviation without prior notice. If a PPT member representative is not available during a discharge event Aviation will conduct the inspection in their absence. Aviation attempts to capture wet inspections for all PPT members, however a wet inspection may not be captured for mobile service providers who do not operate during a stormwater discharge (i.e., wash service providers).

Aviation maintains all inspection data in the ASD. Aviation Inspectors contact each PPT member to confirm the inspection date, time, and meeting location. The inspector confirms contact information and listed activities potentially impacting stormwater quality. A physical site inspection is then performed for the following areas:

1. Areas where industrial materials or activities are exposed to stormwater with a potential to discharge;
2. Areas that are identified as potential pollutant sources in the SWPPP;
3. Locations where spills and leaks from industrial equipment, drums, tanks, and other containers that can occur or has occurred in the past three years; and
4. Areas where tracking or blowing of sediment, trash, raw, final or waste materials is or has occurred from areas of no exposure to exposed areas, including locations where vehicles enter or exit the site.

Discharge points for PHX as a whole are investigated on a quarterly basis by the Aviation Stormwater Program Team during the Outfall RSIs, see **Section 9.3**.

Inspection results related to the following criteria are recorded on the RSI Form presented in **Appendix L**:

1. Inspection date and time;
2. Weather information
3. Observations related to implementation of the CMs at the site, including:
 1. Description of discharges occurring at the time of the inspection;
 2. Previously unidentified discharges from and/or pollutants at the site;
 3. Evidence of, or potential for, previously unidentified pollutants entering the drainage system;
 4. Physical condition of and around all outfalls are inspected as part of the RSIs of Outfalls as described in **Section 9.3**.
4. CMs needing maintenance repairs;

5. Failed CMs that need replacement;
6. Additional CM needed to comply with the permit requirements;
7. Required revisions to the SWPPP resulting from the inspection;
8. Incidents of noncompliance; and
9. Name(s) and signature(s) of inspector(s).

An email identifying findings is sent to the PPT member within 72 hours of the inspection. Identified findings must be addressed within 14 days of the inspection or prior to the next storm event, whichever is sooner. PPT members are required to provide written notification documenting how and when each finding was addressed. If more than 14 days is required to address any findings, the PPT member must provide written notification of rationale for the extended schedule and the projected completion date. If a condition requiring Corrective Action reporting is identified, the steps detailed in **Section 10.1** will be followed.

In some instances, follow-up inspections are conducted to confirm compliance. Lack of action to address findings can subject a PPT member to an Aviation Stormwater NOV or other penalty under R&R 01-02 Stormwater Enforcement and the Stormwater Enforcement Procedures and Civil Penalty Policy, included as **Appendix I**.

Completed RSI Forms, inspection results (with photographs), and PPT member responses are uploaded to the ASD and are available with the SWPPP, as required by MSGP Part 5.6.

8.2 Monthly Self-Inspections

As a supplement to quarterly RSIs, Aviation requires PPT members to conduct monthly, or more frequent, self-inspections of PPT member facility areas where industrial materials or activities are exposed to stormwater with a potential to discharge. A template self-inspection form is available on the virtual notebook and presented in **Appendix M**. Self-inspection reports must have the following information:

1. Inspection date and time;
2. Weather information;
3. Observations related to implementation of the CMs at the site, including:
 - a. Description of discharges occurring at the time of the inspection;
 - b. Previously unidentified discharges from and/or pollutants at the site;
 - c. Evidence of, or potential for, previously unidentified pollutants entering the drainage system;
 - d. Physical condition of and around all outfalls are inspected as part of the Outfall RSIs as described in Section 9.3.
4. CMs needing maintenance repairs;
5. Failed CMs that need replacement;
6. Additional CM needed to comply with the permit requirements;
7. Required revisions to the SWPPP resulting from the inspection;

8. Incidents of noncompliance; and
9. Name(s) and signature(s) of inspector(s).

8.3 Monthly Deicing Inspections

As required by MSGP Part 8.S.6.1., PPT members conducting deicing activities perform monthly inspections during the deicing season (generally November – February). Deicing implies both deicing (i.e., removing frost, snow, or ice) and anti-icing (i.e., preventing accumulation of frost, snow, or ice). Deicing may only occur at terminal gates and on the south air cargo ramp. All other areas require Aviation approval. Airlines must collect all fluids and dispose or recycle in accordance with federal, state, county, and city regulations.

Inspections include the following:

1. Areas where deicing chemicals are stored;
2. Areas where deicing chemicals are applied to aircraft and runways;
3. Areas where deicing equipment and vehicles are stored;
4. Areas used to handle/dispose of the receiving fluids;
5. Identify type of deicing chemicals used (including any glycol alternatives) and monthly quantities; and
6. Run-off control measures that are used prior to, during, and post-application of deicing chemicals

Inspection criteria are incorporated into the deicing inspection form presented in **Appendix V** for PPT members that conduct deicing activities. Airlines must document observed findings related to the Deicing CMs (CM 11).

PPT members conducting deicing activities are required to call 602-8-GLYCOL (602-845-9265) and provide their name, company, location of deicing event, time of deicing event, and contact phone number prior to conducting deicing. PPT members are also required to email Aviation monthly providing the deicing checklist and the total quantity of deicing chemicals used, per MSGP Part 8.S.6.2.

Section 9 Stormwater Monitoring

9.1 Outfall Description

PHX has 18 outfalls to the Salt River along the southern border of the airport from the 24th Street outfall (Outfalls 01 – 06) to the Hohokam Expressway Bridge (Outfall 18). Additionally, there are several on-site retention basins, where water does not leave the site. Figure 2 depicts the stormwater drain system and outfall locations (discharge points). **Table 9-1** summarizes the outfalls and details whether the outfall discharges stormwater from the COP MS4 and/or PHX and whether the outfall is subject to monitoring, as further discussed below.

Table 9-1 Outfall Locations				
Outfall ID	Latitude	Longitude	Type (MS4/MSGP)	Sampled due to industrial activity?
1	33.437445	-112.036302	MS4/MSGP	Yes
2	33.433138	-112.03681	MS4/MSGP	No
3	33.431661	-112.036911	MS4/MSGP	No
4	33.417812	-112.039622	MS4/MSGP	Yes
5	33.420468	-112.018309	MSGP	Yes
6	33.420539	-112.018216	MSGP	Yes
7	33.422466	-112.014482	MSGP	Yes
8	33.423046	-112.013331	MS4/MSGP	Yes
9	33.423548	-112.012476	MSGP	Yes
10	33.424594	-112.01044	MSGP	Yes
11	33.42699	-112.005564	MSGP	Yes
12	33.427639	-112.001143	MSGP	Yes
13	33.427639	-112.001143	MS4/MSGP	Yes
14	33.42967	-111.991258	MSGP	Yes
15	33.430461	-111.989259	MSGP	Yes
16	33.431296	-111.986684	MSGP	Yes
17	33.433517	-111.980988	MS4/MSGP	Yes
18	33.430908	-111.980104	MS4/MSGP	Yes

Exemption/Exceptions

Outfalls 2 and 3 drain parking lots, roadways and other areas where industrial activities do not occur. All previous industrial activities conducted in the drainage of these outfalls has been discontinued.

Outfall 18 is located on the south bank of the Salt River and receives runoff from the closed Estes Landfill, Aviation's stockpile area (clean soil used for backfill on various projects), the 44th St. Bridge, and a small industrial business park. There are no industrial activities or potential sources of pollution other than sediment. Riprap has been placed along the slope between the perimeter road and the fence line to minimize erosion.

Per MSGP Part 4.2.3.4 and 6.4.4, it is not required that Outfalls 2, 3 and 18 are included in the visual assessment or analytical monitoring.

Substantially Identical Outfalls

Aviation has not designated any substantially identical outfalls as allowed in MSGP Part 4.2.3.3 at this time. Aviation may conduct an assessment for such outfalls during future revisions of this SWPPP.

9.2 Outfall Visual Assessments

Under MSGP Part 4.2, Aviation conducts Outfall Visual Assessments of stormwater discharge from the outfalls listed in **Table 9-1** twice per season: two during the summer wet season (June 1 – October 31) and two during the winter wet season (November 1 – May 31) and documents results on the Outfall Visual Assessment Form provided in **Appendix N**.

As required by MSGP Part 4.2.1, the stormwater sample must be collected within the first 30 minutes of discharge or as soon thereafter as practicable. The sample must be collected during a qualifying discharge, which occurs at least 72 hours (three (3) calendar days) following the conclusion of a previous discharge. Based on Aviation’s experience, a rainfall event of at least 0.1 inch is needed to cause discharge at the outfalls. If there are no qualifying rain events or if a sample could not be collected due to adverse conditions for a given quarter, the Outfall Visual Assessment Form will be completed indicating the reason why a sample was not collected. Adverse conditions are those that are dangerous or create inaccessibility for personnel, such as local flooding, high winds, electrical storms, or situations that otherwise make sampling unsafe.

The Outfall Visual Assessment will be conducted using a sample in a clean, colorless glass or plastic container in a well-lit area. The samples will be visually inspected for the following water quality characteristics:

- | | | |
|------------|---------------------|--|
| 1. Color | 4. Floating solids | 7. Foam |
| 2. Odor | 5. Settled solids | 8. Oil sheen |
| 3. Clarity | 6. Suspended solids | 9. Other obvious indicators of pollution |

Outfall Visual Assessment results are recorded on the Outfall Visual Assessment Form. These are stored on the ASD and are available in the virtual notebook and with the SWPPP.

If an abnormal stormwater sample is collected, the inspector will investigate the area draining to the outfall and attempt to identify the pollutant source. The PPT member(s) operating in the drainage area or area where pollutant is identified will be notified immediately. The PPT member identified as causing the abnormal discharge will begin immediate actions to stop the pollutant source from coming in contact with stormwater and follow the Corrective Action steps detailed in **Section 10.2**. If the source cannot be identified or originates at a Tier III or Tier IV PPT member facility on-site, Aviation will notify ADEQ, submit a 5-day written report and submit a Corrective Actions Report Form to ADEQ.

9.3 Outfall Routine Site Inspections

As required by MSGP Part 4.1, Quarterly RSIs are conducted at the outfalls (discharge points) and will be inspected for the following:

1. Evidence of, or the potential for, previously unidentified discharges of pollutants entering the site;
2. Observations regarding physical condition of and around the outfall, including:
 - a. Any flow dissipation devices and
 - b. Evidence of pollutants in discharges and/or to the receiving water.
3. Control measures needing maintenance, repairs or replacement.
4. Additional control measures needed to comply with the permit requirements.

Completed Routine Site Inspection Forms of the outfalls are uploaded to the ASD and are available in the virtual notebook and with the SWPPP, as required by MSGP Part 4.1. A copy of the blank inspection form is included in **Appendix O**.

9.4 Analytical Monitoring Applicability

Analytical monitoring is not required at PHX, therefore a Sampling and Analysis Plan identified under MSGP Part 6.1.1 is not required. Documentation of non-applicability of analytical monitoring requirements is as follows:

1. Routine analytical monitoring: For Sector S, analytical monitoring is required for sites using more than 100,000 gallons per year of glycol-based fluids and/or 100 tons of urea (MSGP, Part 8.S.7). Deicing operations at PHX use less 100,000 gallons of glycol-based deicing fluid and do not use urea.
2. Effluent Limitation Guidelines (ELGs): For Sector S, monitoring for ELGs only applies to airports where urea is used for pavement deicing (MSGP Part 8.S.9). Urea is not used for pavement deicing.
3. Impaired Water (including not-attaining): The Salt River where PHX discharges is not listed as an impaired or not-attaining water, nor is the Salt River an upstream tributary within 2.5 miles of an impaired water.
4. Outstanding Arizona Water (OAW): The Salt River is not listed within 2.5 miles of an OAW. Thus, PHX is not required to perform monitoring associated with OAWs.
5. Other monitoring prescribed by ADEQ: ADEQ has not required additional discharge monitoring to ensure protection of receiving water quality.

Section 10 Reporting

10.1 Aviation's Rules and Regulations

Aviation rules and regulations specify reporting protocols for all releases, fuels and other hazardous substances. All PPT members, including contractors operating at the site, must follow the spill response plan (**Appendix H**) and Aviation's Rule and Regulation 01-01 for Fuel Releases and Releases of Other Regulated Substances (**Appendix F**), which was developed to comply with COP City Code Chapter V, Article IV, Section 4-116 "Compliance with environmental laws." and Section 4-117 "Environmental actions." When a release occurs, the responsible party will immediately notify airport authorities with location, substance released, approximate size of the release and any other pertinent information as identified in the spill response plan. If a release has entered a storm drain, sanitary sewer, or soil, then reports must be made to the ADEQ and NRC.

Aviation's Rule and Regulation 01-02 for Stormwater Enforcement (**Appendix I**), which was developed to comply with COP Code Chapter IV, Article IV, Sections 4-12 "Damages to airport property.", Section 4-109 "Permits and approvals.", and Section 4-116 "Compliance with environmental laws.", describes possible informal and formal enforcement actions Aviation may take to prevent stormwater pollution under authorities granted by City Code Chapter 32 C Stormwater Quality Protection.

10.2 Reportable Quantity Spills

As required by MSGP Part 2.2.1.2.4, if a leak, spill, or other release occurs that contains a hazardous substance, oil in an amount equal to or in excess of a reportable quantity established under either 40 CFR Part 110, 40 CFR Part 117, or 40 CFR Part 302, the permittee shall notify ADEQ Emergency Response at (602) 771-2330. Reporting requirements within the MSGP cover spills that are of a reportable quantity. A sheen represents a reportable quantity of oil.

If a hazardous substance is released to the environment in an amount that equals or exceeds its Reportable Quantity, the release must be reported to the [NRC](#), at 1-602-424-8802 within 15 minutes of discovery. Aviation will assist the PPT member with this notification or will make it on their behalf if the PPT member has not responded to Aviation within the reporting timeframe. The NRC is staffed 24 hours a day by personnel who will ask you to provide as much information about the incident as possible. Include the following:

1. Your name, location, organization, and telephone number;
2. Name and address of the party responsible for the incident; or name of the aircraft carrier or vessel, railcar/truck number, or other identifying information;
3. Date and time of the incident;
4. Location of the incident;
5. Source and cause of the release or spill;
6. Types of material(s) released or spilled;
7. Quantity of materials released or spilled;
8. Medium (e.g., land, water) affected by release or spill;

9. Danger or threat posed by the release or spill;
10. Number and types of injuries or fatalities (if any);
11. Weather conditions at the incident location;
12. Whether an evacuation has occurred;
13. Other agencies notified or about to be notified; and
14. Any other information that may help emergency personnel respond to the incident.

10.3 MS4 Notification

As required by MSGP Part 7.3, if a discharge enters an MS4, Aviation must also submit reports to the MS4 operator. At PHX, the MS4 operator is the City of Phoenix of Water Services Department. A Spill Report Email Template is provided in **Appendix R** for reference when submitting these spill reports.

10.4 Corrective Actions Triggers

As required by MSGP Part 3.1.1, the following conditions require corrective action:

1. An unauthorized discharge to a WOTUS (i.e., Salt River) or a regulated MS4;
2. The permittee becomes aware, or ADEQ determines, that a discharge from the site causes or contributes to an exceedance of an applicable water quality standard(s); and
3. A discharge from the site violates a numeric effluent limitation guideline in MSGP Table 2.2 and in Part 8 sector-specific requirements.

Aviation property's storm drain system discharges to a WOTUS or MS4, therefore any release to a storm drain system on Aviation property meets the Corrective Action conditions.

10.5 Corrective Action Response

If a corrective action condition is discovered, the responsible PPT member will take the following steps as required by MSGP Part 3.2 and Appendix B Subsection 12(d).

24-Hour Response and Reporting:

The responsible PPT member will take immediate actions to mitigate any non-compliance condition(s). The PPT member will review the installation and implementation of the control measures and revise as necessary.

The MSGP Appendix B Subsection 12(d) requires reporting of noncompliance with the MSGP which may endanger human health or the environment. Within 24-hours following such a non-compliance event, the responsible PPT member (Tier I or Tier II), or Aviation, on behalf of a PPT member (Tier III or Tier IV), must verbally notify the following ADEQ office by calling the ADEQ Spill Line: 602-771-2330

The following information must be provided in the verbal report

1. Responsible Party/PPT Member – Company and Individual's name
2. Date and Time of Release

3. Spill Location
4. Material Released
5. Estimated Quantity Entering Drain
6. Description of Spill/Cause
7. Response Action
8. NRC Reported Date/Time & Number – If applicable

Five Day Follow-up Reporting:

The responsible PPT member (Tier I or Tier II) or Aviation, on behalf of the PPT member (Tier III or Tier IV), must provide a written submission to ADEQ electronically or at the office identified below within five (5) days of the corrective action condition. The report will contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the noncompliance. A blank 5-day written report form can be found in **Appendix P**.

Arizona Department of Environmental Quality
 Water Quality Compliance
 1110 W. Washington Street, Mail Code 5415A-1
 Phoenix, AZ 85007
 Office: 602-771-2330
stormwatercompliance@azdeq.gov

30-day Follow-up Reporting

Within 72 hours of identifying a corrective action trigger, the responsible PPT member (Tier I or Tier II) or Aviation, on behalf of the PPT member (Tier III or Tier IV), will document the discovery of the condition, including the following information on the Corrective Action Report Form (**Appendix Q**):

1. Identification of the condition triggering the need for corrective action review;
2. Description of the problem/incident including material type and amount;
3. Date/time the problem was identified;
4. The location of the incident;
5. The cause of the spill, leak, other release or sampling exceedance, if applicable;
6. The outfall name(s)/locations affected; and
7. The affected receiving water and whether the receiving water is a special water (as defined by MSGP Appendix A). The Salt River is not considered a Special Water.

Within 14 calendar days of discovery (or before the next measurable stormwater event, if possible, whichever is sooner), the responsible PPT member will complete and document the following:

1. A summary of corrective actions taken or to be taken, including modifications to CMs, in order to minimize or prevent the reoccurrence of a discharge of a pollutant(s) or prevent further exceedances;

2. Identify and describe SWPPP modification(s) that are required as a result of this discovery and/or corrective actions;
3. Provide date corrective action was initiated or will be initiated;
4. Provide date the corrective action was completed or expected to be completed;
5. Results of any analytical monitoring that prompted corrective action, including any subsequent sampling results, if available;
6. Describe any accelerated monitoring or other permit contingency action that will be required;
7. If corrective actions cannot be implemented within the specified timeframe(s), the permittee will document the reasons for the delay, provide an implementation schedule for completing the necessary changes, including back-up practices in place to ensure compliance with applicable effluent limitations, should a runoff event occur while a CM is off-line;
8. If no corrective action is needed, describe the basis for that determination;
9. Provide the date of and the outcome of the last four (4) RSIs; and
10. A statement signed and certified in accordance with MSGP Appendix B, Subsection 9.

Within 30 days of discovery, a Corrective Action Report Form containing the above information will be submitted to ADEQ either in electronic or paper form, at the office or email address listed above. As required by MSGP Part 8.S.5, the permit holder is responsible for signing and certifying the Corrective Action Report Form.

Tier I and Tier II PPT members are required to submit a Corrective Action Report Form for spills resulting from activities performed by the PPT member or a contractor/service provider performing activities on their behalf.

The PPT member may request assistance from Aviation with completion of the form, but the PPT member (Tier I or Tier II) will be responsible for submission. PPT members are required to provide copies of the Corrective Action Report Forms to Aviation. Corrective Action Report Forms will be uploaded to the ASD.

10.6 Analytical Monitoring

As identified in **Section 9.4**, analytical monitoring is not required; therefore Discharge Monitoring Reports and Control Measure Assessment Reports for Routine Analytical Monitoring are not required to be prepared.

10.7 Planned Changes

As required by MSGP Appendix B Part 12(a), Aviation must notify ADEQ, either directly, through NEPA or other permit process, of physical alterations or additions to the site if the alteration or addition:

1. Causes a reclassification of PHX as a “new source” as defined in 40 CFR 122.29(b); or
2. Significantly changes the nature or increases the quantity of pollutants discharged.

10.8 Anticipated Noncompliance

As required by MSGP Appendix B Part 12(c), Aviation must give advance notice of planned changes that would result in a permit noncompliance.

10.9 Missing or Incorrect Information

As required by MSGP Appendix B Part 12(f), if Aviation determines that the NOI or other information reported to ADEQ was incorrect or incomplete, Aviation will notify the PPT member and the PPT member must immediately submit the revised information to ADEQ.

Section 11 SWPPP Administration

11.1 Signature Requirements

As described in MSGP Appendix B Subsection 9, documentation required by the MSGP must comply with signatory requirements. Documents signed under the terms of the MSGP must also include the following certification:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

11.1.1 Items Requiring Signatures

The responsible corporate officer, co-permittee authorized representative or stormwater program representative must sign the following items, including:

1. SWPPP;
2. RSI reports;
3. Outfall Visual Assessment reports;
4. Training reports;
5. 5-Day Written Report forms
6. Corrective Action Report forms,
7. NOI, NEC and NOT myDEQ submissions and
8. Other information required by the MSGP.

Documents submitted through myDEQ are e-signed.

A duly authorized representative can sign the items listed above only if:

1. The responsible corporate author makes the authorization in writing.
2. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility or an individual or position having overall responsibility for environmental matters for the company.
3. The signed and dated written authorization is included in the SWPPP. A copy must be submitted to ADEQ, if requested.

11.1.2 Aviation Signature Requirements

As a public agency, a chief executive officer or director or a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency must sign the PHX NOI for Aviation facility operations and as airport property owner. Signed authorization forms are included in **Appendix S**.

11.1.3 NOI and NEC Signature Requirements

Co-permittees may be public agencies, corporations, or partnerships or sole proprietorships. The NOI or NEC is required to be signed E-signed on myDEQ by a person in charge, per MSGP Appendix B Subsection 9:

1. For public agencies, either an individual or a position having responsibility for the overall operation of the regulated facility or activity such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility or an individual or position having overall responsibility for environmental matters for the company.
2. For corporations, a responsible corporate officer (for example, a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function or any other person who performs similar policy or decision-making functions for the corporation; or the manager of one or more operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures).
3. For a partnership or a sole proprietorship, a general partner or the proprietor.

Authorizations for co-permittees are maintained on the ASD.

SWPPP Certification:

MSGP Part 8.S.3.3 requires co-permittees covered under Aviation's comprehensive SWPPP to sign and certify this SWPPP. Aviation provides PPT members with a certification form to complete online in the ASD. A blank form is included in **Appendix T**. Completed certification forms are maintained in the virtual notebook.

11.2 SWPPP Modifications

As required by MSGP Part 5.3 and 3.1, the SWPPP will be modified in response to the following triggers:

1. Changes in design, construction, operation or maintenance which has a significant effect on the discharge or potential for discharge of pollutants from the site;

2. When inspections, monitoring or when a corrective action investigation reveal that the SWPPP is ineffective in eliminating or significantly minimizing pollutants or achieving the general objectives of controlling pollutants; and
3. After each deicing season based on the results of the previous year's inspections and input from PPT members, modifications will also be considered.

Changes to the SWPPP to reflect corrective actions will be made in accordance with the corrective action deadlines also identified in **Section 10.2** and documented on the SWPPP modification table in **Appendix W**.

11.3 SWPPP Availability

As required by MSGP Part 5.4, the SWPPP is kept at the site and is made immediately available to ADEQ, USEPA, or another Federal, State, or local agency having stormwater program authority, or the operator of a regulated MS4 receiving discharge from PHX, at the time of an on-site inspection or upon request. Additionally, the SWPPP documents will be available on the Aviation website (<https://www.skyharbor.com/business/RulesAndRegulations/StormWater>), the ASD, and in the virtual notebook.

To review the SWPPP, please contact:

Lisa Fariñas
Project Manager
Planning & Environmental Division
City of Phoenix Aviation Department
2485 E. Buckeye Road
Phoenix, AZ 85034-4420
(602) 722-6173 Cell Phone

11.4 Recordkeeping

As required by MSGP Part 7.4, Aviation will retain a copy of the SWPPP and SWPPP appendices for a period of at least three (3) years from the date that coverage under the MSGP expires or is otherwise terminated.

Appendix A - Control Measures

CM 1.0 Facility-Wide Control Measures

Targeted Activities:

- General Facility Operations

Targeted Pollutants:

- Fuels/Oils/Grease
- Solvents
- Soaps/Detergents
- Battery Acid
- Paint
- Sediment/Debris

Minimize Exposure

- 1.1 Limit pollutant sources to indoors or under cover with containment, when possible.

Good Housekeeping

- 1.2 Maintain areas exposed to stormwater in a clean and orderly manner.
- 1.3 Substitute with less hazardous/biodegradable materials where feasible.

Spill Prevention and Response Procedures

- 1.4 Post Spill Response Plans in areas where spills are most likely to occur.
- 1.5 Spill kits:
 1. Provide spill response materials in areas where spills are likely to occur.
 2. Stock with adequate and appropriate spill response materials.
 3. Label spill kits.
 4. Close and secure container lids.
 5. Keep free of trash.
- 1.6 Spill containment and reporting:
 1. Stop the spill at the source, if safe to do so.
 2. Report spills to the Communications Center by calling (602) 273-3311.
 3. Initiate diversion actions to prevent the spill from entering the stormwater inlet or soil by using drip pans, absorbent booms, mats, or other devices.
 4. Prohibit track out of spilled material.
- 1.7 Spill clean-up:
 1. Use dry methods (i.e., absorbent material, absorbent pads) to clean up a spill.
 2. Dispose of used spill response materials promptly and appropriately per regulations.
 3. Follow appropriate procedures and regulatory reporting for hazardous materials spill response.

Management of Runoff

- 1.8 Outdoor water sources:
 1. Limit access to outdoor water sources.
 2. Post “Do Not Use for Wash Down or Rinsing of Equipment” signs. Email AVN-Stormwater@phoenix.gov for signage.
- 1.9 Divert stormwater run-on away from pollutant sources.

Training

- 1.10 At least one PPT Member from each facility to attend annual train-the-trainer SWPPP training provided by Aviation.
- 1.11 Provide equivalent SWPPP training to employees who work in areas with potential exposure to stormwater or who have responsibilities under the SWPPP.
- 1.12 Service provider/sub-contractor education:
 1. Provide service providers, sub-contractors, construction contractors and haulers with copies of relevant CMs.
 2. Require service providers and sub-contractors to comply with all relevant CM requirements.

CM 1.0 Facility-Wide Control Measures

Inspections and Recordkeeping

- 1.13 PPT Member to maintain the following documentation:
 1. Self-Inspections, at least monthly
 2. Routine Site Inspections (RSI) Records (may be self-performed with Aviation approval)
 3. Corrective Action Reports
 4. Maintenance Records
 5. Employee Stormwater Training
 6. Notice of Intent (NOI) Authorization Certificate or No Exposure Certificate (NEC) issued by Arizona Department of Environmental Quality (ADEQ)
 7. Spill Prevention Control and Countermeasure Plan, if applicable
- 1.14 Perform stormwater self-inspections at least monthly.
 1. Address identified non-compliance findings within 14 days of the inspection or prior to the next storm event, whichever is sooner.
 2. Document corrections made resulting from self-inspections.
- 1.15 Make records available to facility personnel, inspectors, and agency representatives, as needed.
- 1.16 Aviation held documentation to be kept with the SWPPP on the virtual notebook for three years after permit is terminated:
 1. Visual Assessment Reports
 2. Outfall Routine Site Inspection Reports
 3. SWPPP Certification Forms

CM 2.0 Aircraft, Vehicle and Equipment Maintenance

Targeted Activities:

- Aircraft, Vehicle, and Equipment (AVE) Maintenance

Targeted Pollutants:

- Fuels/Oils/Grease
- Battery Acid
- Paint
- Solvents
- Soaps/Detergents

Minimize Exposure

- 2.1 Perform maintenance on paved surfaces and, when possible, indoors or under cover.
- 2.2 Use cleaning or other products indoors, when practical.
- 2.3 Minimize pollutant exposure when performing maintenance activities:
 1. Store maintenance materials and wastes indoors with secondary containment.
 2. Perform maintenance away from stormwater inlets.
 3. Perform maintenance indoors during rain events.
 4. Provide controls in maintenance areas (such as stormwater inlet protection, oil/water separators, berms, and sumps).

Good Housekeeping

- 2.4 Dispose of waste and hazardous waste properly per federal, state, county, and city regulations. See CM 8.0 waste handling key approaches.

Maintenance

- 2.5 Perform preventative AVE maintenance.
- 2.6 Expedite repair.

Spill Prevention and Response Procedures

- 2.7 Maintain spill kits on maintenance vehicles and in designated maintenance areas.
- 2.8 Maintain the appropriate (battery acid) spill kits by battery charging stations and single point battery water stations.
- 2.9 Immediately contain, clean (using dry methods), and report leaks/spills that occur during maintenance activities.

Inspections and Recordkeeping ¹

- 2.10 Inspect maintenance areas at least monthly.

¹ Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

CM 3.0 Aircraft, Vehicle and Equipment Cleaning

Targeted Activities:

- Aircraft, Vehicle, and Equipment (AVE) Washing
- Equipment Degreasing

Targeted Pollutants:

- Fuels/Oils/Grease
- Solvents
- Vehicle Fluids
- Soaps/Detergents

Minimize Exposure

- 3.1 Use dry washing methods when possible.
- 3.2 Use off-site commercial facilities for vehicles and equipment washing, when practical.
- 3.3 Use designated areas for washing:
 1. Wash AVE in covered, contained (i.e., with a berm), and/or indoor wash areas, when practical.
 2. Provide signage to designate wash areas.
- 3.4 Wash water:
 1. Collect washwater for proper disposal.
 2. Discharge washwater to the sanitary sewer through an oil/water separator (OWS).
 3. Recycle washwater, when practical.
- 3.5 Cover, berm, or otherwise block nearby stormwater inlets during washing.
- 3.6 Follow approved wash plan.

Good Housekeeping

- 3.7 Soaps, detergents, and cleaning agents:
 1. Use water-based cleaning agents or non-chlorinated solvents.
 2. Use biodegradable, phosphate-free detergents.
 3. Use non-emulsifying cleaning agents in areas equipped with an OWS.
 4. After washing, remove material (i.e., drippings and residue) from the ground using a vacuum, scrubber or sweeper and dispose of properly.

Maintenance

- 3.8 Repair cracks or gaps in berms or surfaces.

Inspections and Recordkeeping ¹

- 3.9 Inspect wash areas for cracks or gaps in berms or surfaces.
- 3.10 Wash service providers must prepare and submit wash plan to AVN-Stormwater@phoenix.gov for Aviation approval prior to washing.
- 3.11 Revise and resubmit wash plan every 3 years or when changes occur.

¹ Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

CM 4.0 Aircraft, Vehicle and Equipment Storage

Targeted Activities:

- Aircraft, Vehicle, and Equipment (AVE) Storage

Targeted Pollutants:

- Fuels/Oils/Grease
- Solvents
- Hydraulic Fluid

Minimize Exposure

- 4.1 Store AVE in paved areas and, when possible, indoors or under cover.
- 4.2 Store AVE away from stormwater inlets.
- 4.3 Berm AVE parking areas, where practical.
- 4.4 Long term storage of AVE (>30 days):
 1. Drain all fluids and remove batteries.
 2. Wipe down exterior surfaces to remove grease/oil prior to storage.
 3. Request approval by emailing AVN-Stormwater@phoenix.gov, if fluids must be maintained in AVE and perform weekly inspections of AVE.
- 4.5 Temporary storage of vehicles awaiting repair/removal:
 1. Use drip pans or absorbent pads to contain releases.
 2. Check and clean drip pans and absorbent pads on a regular basis.

Inspections and Recordkeeping ¹

- 4.6 Inspect AVE storage areas at least monthly.
- 4.7 Inspect electric AVE, charging stations and single point watering stations to confirm connections are secure and free of leaks/spills at least monthly.

¹ Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

CM 5.0 Material Storage Areas

Targeted Activities:

- Cargo Handling
- Chemical and Fuel Storage
- Painting and Stripping
- Equipment Storage
- Grounds Material Storage

Targeted Pollutants:

- | | |
|-----------------------|---------------------|
| ▪ Fuels/Oils/Grease | ▪ Deicing Chemicals |
| ▪ Miscellaneous Cargo | ▪ Battery Acid |
| ▪ Solvents | ▪ Paint |
| ▪ Soaps/Detergents | ▪ Pesticides |

Minimize Exposure

- 5.1 Clean exterior container surfaces by wiping down and removing excessive oil and grease build-up.
- 5.2 Material and waste storage:
 - 1. Reduce the amount of outdoor storage.
 - 2. Protect materials from rainfall, run-on, runoff, and wind dispersal.
- 5.3 Transfer materials in covered areas.
- 5.4 Limit inventory of materials stored on-site.
- 5.5 Transfer, use, and store liquid materials only in paved areas.
- 5.6 Secondary containment for stored materials:
 - 1. Materials stored outdoors or near exit doorways, no matter how temporary, shall be stored with secondary containment.
 - 2. Secondary containment shall be free of liquid and debris.
 - 3. Secondary containment shall be sized to contain the single largest item on the containment plus sufficient freeboard.
 - 4. Secondary containment shall be in good condition, free of cracks, holes, etc.

Good Housekeeping

- 5.7 Keep Safety Data Sheets (SDSs) for chemicals with potential stormwater exposure immediately accessible either in hard copy or on mobile electronic devices.
- 5.8 Store materials in their original containers or in compatible containers.
- 5.9 Container labeling:
 - 1. Clearly label containers with proper name of its contents.
 - 2. Identify unlabeled/unknown materials and dispose of properly.
- 5.10 Keep materials orderly and eliminate waste collection piles or “bone yards.”

Spill Prevention and Response Procedures

- 5.11 Conduct material transfers in areas where spills can be contained and easily cleaned.
- 5.12 Spill response materials must be in material storage areas and where transfers occur.

Inspections and Recordkeeping ¹

- 5.13 Inspect loading and transfer areas for surface damage/cracks at least monthly.
- 5.14 Inspect material and waste storage areas (containers and tanks) for evidence of corrosion and structural failure; spills, leaks and overfills; and piping system damage/deterioration at least monthly.
- 5.15 Facilities with an SPCC Plan, provide annual certification to Aviation confirming the SPCC Plan is up to date. ²
 - 1. If an SPCC Plan and/or Facility Response Plan is amended due to changes at the facility (i.e., administrative or technical), provide the plan to Aviation for reference.

¹ Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

² For the purpose of reviewing compliance with the stormwater permit, the City of Phoenix does not verify compliance with regulations outside of the scope of the MSGP.

CM 6.0 Airport Fuel Systems and Fueling Areas

Targeted Activities:

- Aircraft, Vehicle, and Equipment (AVE) Fueling
- Fuel Storage

Targeted Pollutants:

- Fuel

Minimize Exposure

- 6.1 Designate paved and contained areas to park mobile refueling equipment and vehicles, if possible.
- 6.2 Install fuel tank monitoring, release, and overfill prevention systems, per federal, state, county and city regulations.
 1. Equip fuel dispensing equipment with “breakaway” hose connections.
- 6.3 Post “Do Not Top Off” signs at vehicle fuel stations. Contact AVN-Stormwater@phoenix.gov for signage.
- 6.4 Prevent pollutant exposure when fueling or defueling.
 1. Cover or block nearby stormwater inlets and outlets to surface drains, when practical.
 2. Fuel equipment in designated areas.
 3. Permanently cover fueling areas, when feasible.

Maintenance

- 6.5 Maintain automatic shut-off mechanisms on fueling equipment.

Spill Prevention and Response Procedures

- 6.6 Label and maintain spill kits on fueling tankers and at fuel stations.
- 6.7 Collection of aircraft fuel samples.
 1. Use appropriate containers to take fuel samples.
 2. Dispose of samples at designated collection sites.

Employee/Contractor Training

- 6.8 Train employees performing fueling activities on response procedures for fuel spills.

Inspections and Recordkeeping ¹

- 6.9 Inspect fueling areas, fueling vehicles and equipment, and storage tanks at least monthly; weekly preferred.
- 6.10 Underground fuel storage tanks should be inspected and tested as required by federal, state, county, and city regulations.

¹ Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

CM 7.0 Building and Grounds Maintenance

Targeted Activities:

- Interior and Exterior Ground Surfaces Cleaning
- Landscape Maintenance
- Pesticide and Herbicide Application
- Fire-suppression System

Targeted Pollutants:

- Sediment
- Landscape Waste
- Fuel/Oil/Grease
- Pesticides, Herbicides, and Fertilizer
- Fire-fighting Foam

Minimize Exposure

7.1 Pesticide, herbicide, and fertilizer:

1. Minimize use of pesticides, herbicides, and fertilizers.
2. Apply according to manufacturer's directions.
3. Store and apply in accordance with Arizona Office of Pest Management, by a licensed applicator.

7.2 Prevent erosion (e.g., stabilizing landscaping, gravel)

Good Housekeeping

7.3 Exterior ground surfaces:

1. Maintain clean floors using dry methods (i.e., brooms, vacuums, etc.). If water is used, recover and dispose of properly.
2. Do not hose down or use cleaning products on outside work areas unless nearby stormwater inlets are blocked, and washwater is collected and properly disposed.
3. Dispose of washwater in an approved drain (i.e., wash rack, drain to the sanitary sewer).

7.4 Interior floor cleaning

1. Dispose of washwater in an approved drain (i.e., janitor's sink, toilet).

7.5 Properly dispose of litter, garbage, landscape waste, debris, and sediment.

Maintenance

7.6 Stormwater inlets and outfalls:

1. Regularly maintain/clean on-site stormwater inlets, control devices and outfalls.
2. Install and regularly maintain control devices such as filter fabric inserts, silt fences, filter socks/wattles/booms.

7.7 Sumps, grease traps, vent hoods and oil/water separators (OWSs):

1. Clean and maintain regularly to prevent overflow. Fill oil/water separator chambers with clean water after each cleaning.
2. Maintain in accordance with manufacturer specifications or as necessary for operations.
3. Comply with all federal, state, county, and city regulations and obtain all required permits.

7.8 Fire-sprinkler and fire suppression systems:

1. Email AVN-Stormwater@phoenix.gov prior to maintenance and testing.
2. Use environmentally responsible, non-fluorinated materials and methods for foam systems when allowed by fire code and approved by Planning and Environmental.
3. Follow all federal, state, county, and city regulations.
4. Filter all water from fire riser tests, deluge tests, water flow tests, and fire system draining activities before discharge to storm drain.
5. Make sure areas draining to stormwater inlets are free of oil, debris and sediment.
6. Recover, contain, and dispose of fire suppression and fire-fighting liquids at an approved licensed facility.

7.9 Fire Fighting Vehicle Maintenance

1. Conduct vehicle water testing in designated areas where there is minimal impact to stormwater inlets.
2. Make sure areas draining to stormwater inlets are free of oil, debris and sediment.

7.10 Email AVN-Stormwater@phoenix.gov prior to draining water in fire sprinkler or fire suppression systems or building fire risers.

CM 7.0 Building and Grounds Maintenance

Spill Prevention and Response Procedures

7.11 Accidental and Emergency Release of Foam

1. Close hangar door and contain inside the hangar allowing material to drain into containment tank.
2. Report spills and emergency releases to the Communications Center by calling (602) 273-3311.
3. For releases to the outside of hangar, immediately place a mat(s) over the storm drains prevent the foam from entering.
4. Vacuum sweep area. If the area appears dry, apply water to collect the foam discharge.
5. Discharge vacuum sweeper contents and decontamination water into the containment tank.
6. Pump and properly dispose of foam using a qualified contractor. Dispose of Aqueous Film Forming Foam (AFFF) at a Resource Conservation and Recovery Act (RCRA) Hazardous Waste Landfill.

7.12 Fire Fighting Vehicles and Firefighting Material Use and Clean Up

1. Water
 - a. Protect stormwater inlets from pollutants the water may encounter.
2. Class A - Structural Foam
 - a. Protect stormwater inlets with spill booms from pollutants.
 - b. Vacuum sweep the area. If the area appears dry, apply water to collect the foam discharge.
 - c. Collected fluids can be discharged into an OWS.
 - d. Decontaminate equipment into OWS.
3. Class B - AFFF
 - a. Use granular absorbent and mats to prevent pollutants from entering stormwater inlets.
 - b. Emergency responder to collect foam, sweep up dry foam and add water to clean pavement.
 - c. Vacuum sweeper required to collect foam, add water to sweep up dry foam.
 - d. Dispose of vacuum sweeper contents in a designated, labeled container.
 - e. Rinse vacuum sweeper and place rinsate in a designated, labeled container.
 - f. Dispose of collected fluids at a RCRA Hazardous Waste Landfill
4. Purple K - Dry Chemical added to Class A foam (from a Vehicle).
 - a. Protect stormwater inlets with spill booms from pollutants.
 - b. Vacuum sweep the area. If the area appears dry, apply water to collect the foam discharge.
 - c. Collected fluids can be discharged into an OWS.
 - d. Decontaminate equipment into OWS.
5. Purple K - Dry Chemical added to Class B foam (from a Fire Extinguisher).
 - a. Use spill booms and mats to prevent pollutants from entering stormwater inlets.
 - b. Vacuum sweeper required to collect foam, add water to sweep up dry foam.
 - c. Dispose of vacuum sweeper contents in a designated, labeled container.
 - d. Rinse vacuum sweeper and place rinsate in a designated, labeled container.
 - e. Dispose of collected fluids at a RCRA Hazardous Waste Landfill
6. Halogen Dry Chemical
 - a. Vacuum sweep the area. If the area appears dry, apply water to collect the foam discharge.
 - b. Collected fluids can be discharged into an OWS.
 - c. Decontaminate equipment into OWS.

CM 7.0 Building and Grounds Maintenance

Inspections and Recordkeeping ¹

- 7.13 Inspect stormwater inlets
- 7.14 Inspect sumps, OWSs, and grease traps.
- 7.15 Inspect fire sprinkler and fire suppression system and collection sumps. Inspect fire and smoke detectors and actuators for proper operation and protect from weather, pipe breaks, electrical shorts or other sources of false activations.
- 7.16 Inspect pesticide, herbicide and fertilizer storage areas.
- 7.17 Maintain record of Arizona Office of Pest Management license.
- 7.18 Maintain records of all repairs and maintenance of fire suppression systems, OWSs, and grease traps.
- 7.19 Maintain records of proper recovery, containment, and disposal of fire suppression liquids at an approved licensed facility.

¹ Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

CM 8.0 Recycling, Waste Handling and Disposal

Targeted Activities:

- Garbage Handling and Disposal
- Recyclable Handling and Disposal
- Universal Waste Handling and Disposal
- Regulated Waste Handling and Disposal

Targeted Pollutants:

- Fuels/Oils/Grease
- Garbage
- Floatable Debris
- Battery Acid
- Paint
- Solvents
- Regulated Waste

Minimize Exposure

8.1 Reduce, reuse, and recycle:

1. When possible, recycle, reclaim, and/or reuse materials.
2. Potential recyclable materials include:

- Used oil/grease
- Brake/transmission hydraulic fluid
- Antifreeze and deicing fluid
- Automotive and aircraft batteries
- Washwater
- Used vehicle tires
- Empty oil filters
- Sump fuel
- Empty aerosol cans

8.2 Used battery management:¹

1. Store used batteries indoors or under cover on secondary containment.

8.3 Used oil containers and filters:

1. Drain used oil filters before recycling or disposing.
2. Store closed containers of drained filters indoors or under cover with secondary containment.

8.4 Label waste per regulations (hazardous, universal, such as, used batteries and used oil).

8.5 Clean dumpsters in designated wash locations that are connected to oil/water separators (OWSs) that discharge to the sanitary sewer.

Good Housekeeping

8.6 Provide an adequate number of trash receptacles throughout the facility.

8.7 Regulated waste

1. Properly dispose of regulated waste according to all federal, state, county, and city regulations.¹

8.8 Garbage and non-regulated waste material:

1. Properly dispose of non-regulated waste according to all federal, state, county, and city regulations.
2. Schedule waste collection services regularly to prevent excess accumulation.

8.9 Garbage collection storage:

1. Provide lids for trash receptacles or maintain under cover (i.e., dumpsters, trash cans, etc.).
2. Keep dumpster lids closed.
3. Dumpster drain holes must have plugs.
4. Do not dispose of liquids or regulated materials in solid waste dumpsters.
5. Keep the garbage collection storage areas clean and free of litter, un-contained garbage, and floatable debris.

Employee Training

8.10 Regulated and universal waste management training:¹

1. Train employees on the proper disposal procedures for all wastes.

CM 8.0 Recycling, Waste Handling and Disposal

Inspections and Recordkeeping ²

8.11 Inspect waste storage areas, at least monthly.

8.12 Maintain records of regulated waste disposal in accordance with federal, state, county, and city regulations.¹

¹ For the purpose of reviewing compliance with the stormwater permit, the City of Phoenix does not verify compliance with regulations outside of the scope of the MSGP.

² Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

CM 9.0 Lavatory and Potable Water Service

Targeted Activities:

- Lavatory Operations and Maintenance
- Potable Water Operation and Maintenance

Targeted Pollutants

- Lavatory Waste
- Deodorizer
- Sediment
- Fuels/Oils/Grease
- Disinfectants

Minimize Exposure

- 9.1 Conduct lavatory and aircraft potable water tank activities away from stormwater inlets.
- 9.2 Aircraft lavatory servicing:
 1. Use only approved disinfectants.
 2. Properly secure hoses, valves and equipment when transporting and transferring waste.
 3. Use buckets and/or drip pans to capture leaks from aircraft lavatory access fittings.
 4. Completely drain the aircraft connecting hose after servicing an aircraft.
 5. Discharge lavatory waste to approved location only (i.e., triturator, sanitary sewer).
 6. Secure caps on cart hose connections when not in use.
 7. Empty lavatory cart regularly to prevent overflow.
- 9.3 Aircraft potable water tank servicing:
 1. Perform operations away from stormwater inlets.
 2. Collect maintenance disinfection liquids from aircraft potable water tanks and properly discharge to a sanitary sewer.
- 9.4 Potable water cabinet servicing:
 1. When flushing the potable water line, make sure that the potable water does not encounter grease, fuel, chemicals, or sediment during discharge. If possible, divert potable water away from stormwater inlets.

Maintenance

- 9.5 Lavatory service equipment:
 1. Maintain equipment in good working order. Replace worn equipment before leaks develop.
 2. Notify owner of lavatory equipment or appropriate ground service personnel when maintenance is required.

Spill Prevention and Response Procedures

- 9.6 Provide and maintain spill kits on lavatory service vehicles.
- 9.7 Do not hose down spills.

Inspections and Recordkeeping ¹

- 9.8 Lavatory service equipment inspections:
 1. Inspect integrity of hoses and fittings for transferring lavatory fluids.

¹ Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

CM 10.0 Facility Construction/Renovation

Targeted Activities:

- Facility Improvements
- New Construction
- Significant Renovation

Targeted Pollutants:

- Fuels/Oils/Grease
- Floatable Debris
- Soaps/Detergents
- Paint
- Solvents
- Sediment

Minimize Exposure

- 10.1 Prior to final design, contact your Business & Properties Liaison to obtain project approval for the Tenant Improvement (TI) program. Refer to TI Handbook and AVN Design Manual.
- 10.2 Facility design:
1. Provide indoor or covered areas for industrial activities.
 2. Provide impervious surfaces for outdoor industrial activity areas.
 3. Design outdoor industrial activity areas to prevent run-on and runoff.
 4. Incorporate structural control measures such as oil/water separators or detention basins, as needed.
- 10.3 Fire suppression system design
1. Submit design of fire suppression system through the TI process.
 2. Select environmentally responsible methods and non-fluorinated materials, as approved by Planning & Environmental and where allowable by fire code and federal, state, county, and city regulations.
 3. Design to implement containment for collection and proper disposal of fire suppression liquids.
- 10.4 Comply with all federal, state, county, and city regulations and obtain all required permits.

Management of Runoff

- 10.5 Design for infiltration, reuse, containment, and/or reduction of impacted runoff.
- 10.6 Implement best management practices outlined in project specific Arizona Pollutant Discharge Elimination System Construction General Permit (CGP) SWPPP for project areas greater than 1 acre.

Dust Generation and Vehicle Tracking of Industrial Materials

- 10.7 Comply with Maricopa County dust control regulations Rule 310 and Rule 316. Obtain permit coverage if project disturbed area is greater than 0.10 acre.

Training

- 10.8 Provide contractors and subcontractors with relevant CMs during design, bidding, and after contract awarded.

Inspections and Recordkeeping ¹

- 10.9 Obtain required permits as outlined in the TI handbook prior to construction.
- 10.10 Maintain copies or records for projects as required by applicable permits and Aviation.
- 10.11 Inspect infrastructure at construction milestones for illicit or cross connections and correct.

¹ Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

CM 11.0 Aircraft Deicing

Targeted Activities:

- Aircraft Deicing and Anti-icing

Targeted Pollutants:

- Deicing Chemicals

Minimize Exposure

- 11.1 Consider using alternative methods to chemicals (i.e., hot water, moving aircraft into the sun, aircraft covers, etc.).
- 11.2 Apply the minimum required amount of deicing chemicals, when possible.
- 11.3 Conduct deicing in designated areas only. Special circumstances require written approval. Email AVN-Stormwater@phoenix.gov before event.

Good Housekeeping

- 11.4 Deicing Event:
 1. Arrange for company's vacuum scrubber to be present before deicing operation begins.
 2. Clean ramp after each deicing operation using a vacuum scrubber.
 3. During rain events, begin deicing operation only after vacuum scrubber has arrived and is operating.
- 11.5 Collect fluids and dispose or recycle in accordance with federal, state, county, and city regulations.

Spill Prevention and Response Procedures

- 11.6 Maintain appropriate spill response materials for glycol spills.
- 11.7 Place glycol spill booms around the deicing operations area or around stormwater inlets during rain events.

Maintenance

- 11.8 Deicing equipment maintenance:
 1. Perform maintenance away from stormwater inlets. If not possible, cover or block nearby stormwater inlets.

Inspections and Recordkeeping

- 11.9 Perform monthly deicing inspections during the deicing season, November through February:
 1. Perform inspection of deicing chemical storage areas and equipment.
 2. Perform during a deicing event (either self-performed or by Aviation), if applicable.
 3. Include photos.
- 11.10 Report deicing fluid quantities to Aviation monthly.
- 11.11 Report each deicing event to the Stormwater Pollution Prevention Deicing Hotline at 602-8-GLYCOL (602-845-9265) and provide:
 - Name
 - Company/Airline
 - Location of deicing/anti-icing event (i.e., terminal and gate number)
 - Aircraft tail number
 - Time of deicing/anti-icing event
 - Phone number

¹ Retain documentation of inspection in accordance with CM 1.13 and conduct inspections in accordance with CM 1.14.

**Appendix F - Rule and Regulation 01-01 for
Fuel Releases and Releases of
Other Regulated Substances**

PHOENIX SKY HARBOR
INTERNATIONAL AIRPORT

America's Friendliest Airport™

PHOENIX DEER VALLEY AIRPORT

PHOENIX GOODYEAR AIRPORT

City of Phoenix Aviation Department Rules & Regulations

Number: R&R 01-01

Authority: This Rule and regulation is promulgated pursuant to Phoenix City Code Chapter IV, Article V, Sections 4-116 and 4-117.

Rule and Regulation: Fuel Release and Releases of Other Regulated Substances

This Rule establishes the procedures for internal reporting, response, clean up, documentation and subsequent notifications associated with fuel releases and releases of other regulated substances occurring at Phoenix Sky Harbor International, Phoenix Deer Valley and Phoenix Goodyear Airports.

Definitions

Release:

A release is defined as any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, placing, leaching, dumping, or disposing into or on any land in a manner that fuels and other regulated substances, pollutants, or stormwater may come to be located in a public storm drain system.

Regulated Substances:

Regulated substances include without limitation, any substance, materials or wastes that are or become regulated under, or that are classified as hazardous or toxic under any environmental law, including petroleum.

Reporting Procedures

When a release occurs, the responsible party will immediately notify airport authorities with the location, substance released, approximate size of the release and any other pertinent information, such as whether the release has been stopped, and the aircraft and/or equipment involved or if a release has flowed into a storm or sanitary drain or bare soils. The reporting party shall remain in a safe location near the release site and will report to Aviation and Fire Department representatives upon arrival.

PHOENIX SKY HARBOR
INTERNATIONAL AIRPORT

America's Friendliest Airport™

PHOENIX DEER VALLEY AIRPORT

PHOENIX GOODYEAR AIRPORT

City of Phoenix Aviation Department Rules & Regulations

If the release is threatening structures, storm or sanitary drains or bare soil, the reporting party will initiate diversion actions, such as diking the leading edge of the release with an approved absorbent material or device. Spill kits have been strategically placed around the airports to assist in diking a release.

Phoenix Sky Harbor International Airport

A release will be reported to Sky Harbor Communications at (602) 273-3311. Communications will follow established response procedures including notifying the Fire Department via the Fire Department Alarm Room phone.

Phoenix Deer Valley Airport

A release will be reported to Deer Valley Operations at (623) 869-0977 from 6:00 A.M. Monday morning to 9:00 P.M. Friday night and from 6:00 A.M. to 9:00 P.M. on Saturday and Sunday. On Friday and Saturday nights from 9:00 P.M. to 6:00 A.M. a release will be reported to Sky Harbor Communications at (602) 273-3311.

Deer Valley Operations will call the Phoenix Fire Department via 911 if a potential fire hazard exists. Sky Harbor Communications will call the On-Call Deer Valley Operations Supervisor and call 911 if appropriate.

Deer Valley Operations will notify Sky Harbor Communications at (602) 273-3311 for additional City resources to assist in extreme emergencies or unusual circumstances.

Phoenix Goodyear Airport

A release will be reported to Goodyear Operations at (623) 932-4550 from 6:00 A.M. to 9:00 P.M. From 9:00 P.M. to 6:00 A.M. a release will be reported to Sky Harbor Communications at (602) 273-3311.

Goodyear Operations will call the Goodyear Fire Department at (623) 932-3910 if a potential fire hazard exists. Goodyear Fire Department may notify City of Phoenix Fire Dispatch as may be appropriate.

PHOENIX SKY HARBOR
INTERNATIONAL AIRPORT

America's Friendliest Airport™

PHOENIX DEER VALLEY AIRPORT

PHOENIX GOODYEAR AIRPORT

City of Phoenix Aviation Department Rules & Regulations

Goodyear Operations will notify Sky Harbor Communications at (602) 273-3311 for additional City resources to assist in extreme emergencies or unusual circumstances.

General Aviation Pilot Sump Fuel Disposals

Preflight sump fuel samples shall not be dumped on the apron, but shall be properly disposed of in accordance with the Aircraft Fueling section of the General Aviation Handbook. Enforcement options for improper sump fuel disposals are set forth in the Aviation Department Storm Water Enforcement Rule and Regulation.

Response Procedures

Phoenix Sky Harbor International Airport

Upon notification of a release, Sky Harbor Communications shall notify the following:

1. Fire Department (via Fire Department Alarm Room phone)
2. Airside/Landside Operations Supervisor, depending on spill location (via radio dispatch)
3. Facilities and Services Landside Maintenance (via radio dispatch)
4. Planning & Environmental via Emergency Notification System (ENS)

Aviation and Fire Department units shall respond and establish "Command." Command will utilize established ICS and Unified Command Protocols and make the determination on how the release, fire hazard and clean up will be handled.

Airport Operations may at their discretion cancel the Fire Department response for minor spills.

Command will liaison between the aircraft and/or equipment operator and clean up crews during the response. Photographs should be taken of unusual or large releases to supplement follow up with the responsible party.

Upon approval of Command the fuel handler, airline or tenant responsible for a release may be authorized to clean up the release. Liability for clean up and the proper disposal of generated release materials will be that party's. If, however,

PHOENIX SKY HARBOR
INTERNATIONAL AIRPORT

America's Friendliest Airport™

PHOENIX DEER VALLEY AIRPORT

PHOENIX GOODYEAR AIRPORT

City of Phoenix Aviation Department Rules & Regulations

the responsible party does not take action or should the Fire Department direct, due to fire or safety hazards, Landside Maintenance will provide clean up services and the responsible party will be billed the greater of actual costs or a minimum of \$300 for labor and materials.

After fire and safety hazards are under control, and upon authorization from Command, release clean up crews will be allowed into the area. The crew shall have the necessary materials and/or equipment to restore the area to a state reasonably equivalent to its condition prior to the release.

Only personnel that have completed their companies Fuel Spill Recovery and Clean Up training will respond to the spill site.

Do not start, stop or move equipment in the spill area without permission from Command.

Personnel protective equipment (PPE), as prescribed by Aviation Safety (Level D protection in accordance with 29CFR 1910.120), will be worn by all personnel involved in spill clean up. Level D PPE consists of a work uniform with long sleeve shirt and long pants or coveralls, gloves, chemical resistant shoes, safety glasses or goggles.

All personnel and units shall remain upwind to avoid vapors from spilled fuel.

Radios and cellular telephones are not to be used within 25 feet of the fuel spill.

Clean up personnel will observe all directions from Command and the responding Fire Department personnel. Command and all Fire units shall have an uninterrupted view and access to the spill site.

Aviation personnel shall provide clean up of spills only in areas that provide adequate open ventilation. Should a spill occur in a confined space or migrate to a confined space, clean up shall not proceed without first consulting with the Aviation Department Planning & Environmental, Environmental Section, Safety Officer and Fire Department personnel.

PHOENIX SKY HARBOR
INTERNATIONAL AIRPORT

America's Friendliest Airport™

PHOENIX DEER VALLEY AIRPORT

PHOENIX GOODYEAR AIRPORT

City of Phoenix Aviation Department Rules & Regulations

Due to the extremely low flash point of Aviation Gasoline (less than -50F) Aviation Department staff are not to attempt the clean up of a large spill. The responding Fire Department shall determine the fire danger and contact the Environmental Section of the Planning and Environmental Division [via Sky Harbor Communications, (602) 273-3311] immediately so that they may contact the City of Phoenix hazardous waste contractor if necessary.

In this event, Aviation will require the responsible party to hire an environmental response contractor to mitigate the release, and to report the release to the National Response Center at (800) 424-8802 and the Arizona Department of Environmental Quality at (602) 771-2300.

Phoenix Deer Valley Airport and Phoenix Goodyear Airport

Upon notification of a release, Airport Operations crews will respond and direct cleanup activities. The responsible party may choose to perform the work with an approved absorbent material or Airport crews will have the materials and capabilities to clean up release of fewer than 10 gallons. Larger releases may necessitate contacting an environmental response contractor. This may be done by the responsible party or the Airport by contacting the Environmental Section of the Planning and Environmental Division [via Sky Harbor Communications, (602) 273-3311].

If a release has flowed into a storm or sanitary drain or bare soils, contact the Environmental Section of the Planning and Environmental Division [via Sky Harbor Communications, (602) 273-3311] immediately. In this event, Aviation will require the responsible party to hire an environmental response contractor to mitigate the release, and to report the release to the National Response Center at (800) 424-8802 and the Arizona Department of Environmental Quality at (602) 771-2300.

Approved Clean Up Materials

Clean up crews will use approved absorbent materials and equipment best suited and environmentally acceptable for the clean up of releases. Absorbent materials generated by the Aviation Department will be containerized and the Environmental Section of the Planning and Environmental Division will be responsible for arranging for appropriate disposal. The responsible party shall bear the cost of the clean up and proper disposal of these materials.

INTERNATIONAL AIRPORT

America's Friendliest Airport™

PHOENIX DEER VALLEY AIRPORT

PHOENIX GOODYEAR AIRPORT

City of Phoenix Aviation Department Rules & Regulations

Additional Notifications

In addition to the regular emergency contacts, the following Aviation Department personnel may need to be contacted:

Aviation Department Planning and Environmental Division

(602) 273-8861, Notify if a release is of a material other than Jet A fuel, the release area cannot be returned to its prior condition, or a release enters a storm or sanitary drain or bare soil.

Aviation Department Safety Officer

(602) 273-3414, Cellular (602) 821-4436. Notify Aviation Department Safety Officer for any personnel safety issues related to fuel releases and releases of other regulated substances clean up procedures.

Documentation and Billings

Airport Operations will initiate an investigation of the cause of a release, fill in the first part of a Release Billing Notice and forward the form to Facilities and Services for completion.

Fuel releases and releases of other regulated substances will be subject to the greater of actual costs or a minimum \$300.00 response and investigation fee if Aviation personnel provide clean up services. The on site Aviation Supervisor shall document on a work order all labor, equipment and supplies utilized for a release clean up.

Pavement destruction suspected as a result of a release shall be documented by the Aviation personnel on site who shall then notify the Airfield Maintenance Supervisor.

Discovery of a failure to report a release will result in the issuance of a Storm Water Notice of Violation and possible monetary penalty to the responsible party.

The Aviation Department shall recover all costs associated with a release, including clean up, generated materials disposal, regulatory and investigatory time, waste testing and pavement repair costs from the responsible party.

When a spill occurs, per AVN Rule & Regulation 01-01*:

1. **Stop** the source of the spill if it is safe to do so.
2. **For all spills regardless of size**, call the Communications Center at **(602) 273-3311** and relay the following:
 - a. **Location**
 - b. **Material Spilled**
 - c. **Whether the release has been stopped**
 - d. **Approximate size of the spill**
 - e. **Aircraft and/or equipment involved**
 - f. **Whether your personnel are trained and capable of cleanup**
3. **Initiate** diversion actions (such as diking the leading edge of the spill with absorbent materials) if release is threatening structures, storm or sanitary drains or bare soil.
4. **Remain** on site in safe location and meet with Fire Department and Airport Operations (Command).
5. **Clean-up spills** upon approval from Command and appropriately dispose of waste.

**Appendix I - Rule and Regulation 01-02
for Stormwater Enforcement**

City of Phoenix Aviation Department Rules & Regulations

Number: R&R 01-02

Authority: **This Rule and regulation is promulgated pursuant to Phoenix City Code Chapter IV, Article IV, Sections 4-12; 4-109; 4-116.**

The Environmental Protection Agency (EPA) has developed a National program to regulate storm water quality runoff from industrial and urban settings, protecting streams, rivers and lakes fed by these sources.

The EPA has issued a (NPDES) Permit to the City of Phoenix (as a municipality) and to the Phoenix airports (as an industrial source) imposing certain obligations and responsibilities. Airports and associated airline, fueling and FBO activities are specifically required by Federal law to obtain this permit and take certain actions to curtail runoff pollution from these activities. The airports' permits regulate the City's Aviation Department, its tenants and permittees (see the "Multi-Sector General Permit for Industrial Activities, National Pollutant Discharge Elimination Program (NPDES)", dated October 30, 2000, *Federal Register* Vol. 65, No. 210.)

Likewise, the City of Phoenix has the authority to regulate the use of the public storm drainage system. Phoenix City Code Chapter 32C was adopted to reduce to the maximum extent practicable the addition of pollutants such as fuels, chemicals and debris to storm water runoff to prevent violations of the City's NPDES permit or applicable water quality standards.

Phoenix City Code Section 4-109 requires any person who spills or otherwise releases a pollutant on airport property, including disposal of pre-flight check sump fuel on the ramp, to immediately remove the pollutant. Section 4-12 confers ultimate responsibility for all damages to airport property upon an airport tenant, whether caused by the tenant's employees or its contractors.

Rules and Regulations:

Storm Water Enforcement

This Rule explains the possible actions that the City of Phoenix Aviation Department may use to prevent pollution of the Waters of the United States (more specifically the Salt River, Agua Fria tributaries, or Cave Creek drainage) through the municipal storm drain system that provides surface drainage on the three City of Phoenix Airports. The Aviation Department believes that a policy specific for its airports will better ensure that all enforcement actions will be handled with fairness and with consideration for airport operations.

City of Phoenix Aviation Department Rules & Regulations

Initial Self-Reporting Policy/Tenant Responsibility

All tenants and permittees (collectively "tenants") shall report spills, releases and discharges of pollutants, or releases threatening to enter the storm drain system immediately to the Aviation Department. All releases of pollutants must be contained and removed by the tenant or upon request by the City of Phoenix Aviation Department Facilities and Services Division. All costs incurred to the Aviation Department due to the clean up of a tenant-related spill will be forwarded to the responsible tenant. Airport tenants who self-report and respond to such situations demonstrate good faith efforts to comply with this policy, and such action will be considered as a mitigating factor in any enforcement process. Generally, the Aviation Department will not initiate formal enforcement action on a self-reported, unavoidable discharge under circumstances when it is unreasonable to prevent such discharge if the discharge amount is minimal and poses no risk to human health or the environment. Improper disposal of pre-flight check sump fuel on to the ramp is cause for enforcement.

Enforcement Criteria

When a violation of the City Storm Water Ordinance (Chapter 32C) or other applicable environmental regulation is identified, enforcement actions can be taken. The enforcement action (including the amount of any monetary penalties) will depend upon several factors:

1. Severity of the violation; the duration, quality and quantity of pollutants; and effect on public safety and the environment.
2. The violator's knowledge (either negligent or intentional) of the regulation being violated.
3. Any history of violations, including enforcement actions involving the site, business, or individual.
4. The effect of the enforcement action to act as a deterrent of similar violations in the regulated community.

Levels of Enforcement

Several levels of enforcement actions are available to the City. The typical types of enforcement actions are listed below in increasing order of severity.

Informal Enforcement Actions

Each violation will be documented with a written Notice of Violation (NOV) issued by on-site airport personnel. The NOV will require the violating facility to report the incident to the Aviation Environmental Section at (602) 273-8861 within 24 hours of receipt of the NOV. Weekend reporting can be left on the Aviation Department answering machine at the same phone number.

City of Phoenix Aviation Department Rules & Regulations

Except for NOV's that are issued for improper sump fuel disposals, which are subject to the following paragraph of this rule, within 15 calendar days of receipt of the NOV, the violating facility must submit a detailed written report to the Aviation Environmental Section explaining how the incident took place and the corrective action taken to prevent future occurrences. If a tenant's contractor caused the violation, the contractor shall send a copy of the report to the tenant and the tenant is also required to submit a detailed written report. At a minimum, this report must address the following:

1. A summary of the names and positions of persons involved in the incident; equipment involved; and how the incident occurred, including time, place and materials and quantity released.
2. A detailed description of the investigation and conclusions.
3. How cleanup of released materials was performed, including equipment and materials used in the clean up, and how waste was disposed.
4. Corrective action a company has taken or plans to take and the time in which all-corrective action will be completed. If corrective action has not been completed within the 15-day period, a compliance schedule must be submitted for approval by the Aviation Department.
5. What changes to training, equipment, practices (best management practices), procedures, or personnel have been implemented to prevent future incidents from occurring.
6. The report must be signed by the supervisor/manager, and shall contain the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with these requirements will subject the violator to further enforcement actions. Compliance with this request does not preclude the City from taking additional enforcement action under its authority: Chapter 32C of the Phoenix City Code.

City of Phoenix Aviation Department Rules & Regulations

If additional time is required in order to complete the written report, a written request for an extension must be submitted by the violating facility in time for City approval prior to the due date.

Improper Sump Fuel Disposal NOVs

General Aviation tenants who fail to properly dispose of pre-flight fuel samples in accordance with the General Aviation Handbook will receive a written warning for the first violation. The second violation will result in a \$100.00 penalty. A third violation is grounds for termination of the violator's Aircraft Storage Permit.

Airport Tenant Compliance

1. The Aviation Environmental Section shall notify the Deputy Director of Business and Properties for further enforcement action if any of the following occurs:
 - a. An airport tenant or permittee (collectively "tenant") has received two NOVs within a 24-month period; or
 - b. The tenant has failed to timely provide the detailed written report as required under Section I of this policy; or
 - c. The tenant fails to comply with the corrective actions that the tenant submitted; or
 - d. The tenant fails to follow the Airport's best management practices, or upon recommendation of the Aviation Department Environmental Section.

2. Tenant/NPDES Co-permittees: The Aviation Department has allowed eligible tenants to become co-permittees on the City of Phoenix National Pollutant Discharge Elimination System Storm Water Multi-Sector General Permit for Industrial Activities (the "NPDES Permit") as a means to save eligible tenants substantial costs of obtaining individual NPDES permits. Each tenant who has joined the City as a Co-permittee ("a NPDES Co-permittee") has signed an agreement that sets forth the terms and conditions for being retained on the NPDES permit (the "NPDES Amendment.")

In the event that Section (1)(a), (b) or (c) of this paragraph applies to NPDES Co-permittee, the Deputy Director shall notify the tenant/NPDES Co-permittee's Chief Operating Officer or designee and shall establish a corrective action plan pursuant to the procedures that have been agreed to

City of Phoenix Aviation Department Rules & Regulations

by the parties to achieve compliance with the NPDES Permit and Chapter 32C.

If a NPDES Co-permittee fails to comply with a corrective action plan, including best management practices or other requirements, such non-compliance may be deemed to be a material breach of the tenancy agreement or permit and may provide grounds to terminate the tenant's NPDES Co-Permittee status and/or its ability to do business on airport property.

3. Tenant/Non-NPDES Co-Permittees: If a tenant who has not signed a NPDES Agreement fails to comply with the NPDES Permit or Chapter 32C, the Environmental Section may refer the tenant to the appropriate Deputy Director for further enforcement action or termination of the tenant's permission to do business on Airport property. All Airport users should be aware that any industrial discharge or polluted runoff to the storm drain is a violation of federal law, unless it is specifically authorized by a NPDES permit.
4. The provisions of this Subsection shall be in addition to such other remedies as are provided by this Policy or otherwise provided by law.

Formal Enforcement Actions

Compliance Status Review Meeting

In situations where prior enforcement actions have failed to produce compliance or a reasonable commitment to attain compliance by an established deadline, a "Notice of Compliance Status Review Meeting" letter will be issued to the violator. The Notice will establish a date, time and location for a meeting between the violator and City representatives. The meeting will be held to present evidence establishing the non-compliance and requesting the violator to "show cause" as to why the City should not engage in more serious enforcement actions. At the meeting, the City will review the violations, tenant's responses to the violations, explain the City enforcement policies and identify any potential penalties for non-compliance. An attempt will be made to reach an agreement on the type of compliance activity required. The terms of this agreement will be contained in a Storm Water Settlement Agreement. If agreement cannot be reached, the City may utilize all remedies available as it deems appropriate.

Exhibit “A” Storm Water Discharge Civil Penalties

INTRODUCTION

In 1972, Congress passed into law the Clean Water Act (CWA) amendments to remedy federal water pollution on a national basis. The amended CWA absolutely prohibits the discharge of any pollutant into waters of the United States via the public storm drain system unless the discharge is made in accordance with a National Pollutant Discharge Elimination System (NPDES) Permit. In Arizona, NPDES Permits are made available by the United States Environmental Protection Agency (EPA), setting forth conditions under which discharges may be made.

The EPA has issued a NPDES Permit to the City of Phoenix, as a whole, under the authority of the CWA. In addition, the EPA has issued a NPDES Storm Water Multi-Sector General Permit on a national basis to cover a wide variety of industrial activities. Included in the numerous industry-specific sections of the Multi-Sector NPDES Permit is Air Transportation, and associated activities, imposing obligations and responsibilities upon the City's Aviation Department, its tenants and permittees.

The Phoenix City Council has also authorized the City Manager or his designee to regulate the use of the public storm discharge system. Phoenix City Code Ch. 32C was adopted to reduce to the maximum extent practicable, the addition of pollutants to storm water to prevent violations of the City's NPDES permit or applicable water quality standards.

In 1994, the City of Phoenix Department of Street Transportation adopted a policy entitled "Storm Water Monitoring Enforcement Action" in order to comply with the City's NPDES Permit and Phoenix City Code Ch. 32C. Likewise, the City of Phoenix Aviation Department has adopted the Aviation Department Storm Water Enforcement Policy in order to save tenants the time and expense of applying for an individual NPDES Permit and to encourage the development of airport wide best management practices to prevent pollution of the airport's storm water drainage system.

Following is the Aviation Department Storm Water Enforcement Policy, which is applicable to Phoenix Sky Harbor International, Phoenix Goodyear Airport, and Deer Valley Airport. **It applies to all airport users whether or not they are co-permittees on the airports' NPDES Permit.**

SECTION I
CITY OF PHOENIX AVIATION DEPARTMENT
STORM WATER DISCHARGE ENFORCEMENT PROCEDURES
Effective Date: March 1, 1997

- A. **PURPOSE** – These procedures explain the possible actions that the City of Phoenix Aviation Department may use to prevent pollution of the waters of the United States (more specifically the Salt River, Agua Fria tributaries, or Cave Creek drainage) through the municipal storm drain system for airport drainage. The Aviation Department believes that a policy specific for its airports will better ensure that all enforcement actions will be handled with fairness, and with consideration for airport operations. While Sections I and II of this policy contemplate actions that will be taken in ascending order, emergency situations or serious violations may call for immediate sanctions and by passing one or more of the less stringent actions.
- B. **INITIAL SELF-REPORTING POLICY/TENANT RESPONSIBILITY** – All tenants and permittees (collectively “Tenants”) shall report spills, releases and discharges of pollutants, or releases threatening the storm drain system immediately to the Aviation Department. Airport Tenants who self report demonstrate good faith efforts to comply with this policy and such action will be considered as a mitigating factor in the penalty process. Generally, the Aviation Department will not initiate formal enforcement action on a self-reported, unavoidable discharge under circumstances when it is unreasonable to prevent such discharge, the discharge amount is minimal and poses no risk to human health or the environment.

Although Phoenix City Code Section 4-109 requires any person who spills a pollutant on airport property to immediately remove the pollutant, Section 4-12 confers ultimate responsibility for all damages to airport property upon an airport Tenant, whether caused by the Tenant’s employees or its contractor.

- C. **ENFORCEMENT CRITERIA** – When a violation of the City Storm Water Ordinance (Chapter 32C) or other applicable environmental regulation is identified, enforcement actions can be taken. The enforcement action (including the amount of any monetary penalties) will depend upon several factors:
- 1) Severity of the violation; the duration, quality and quantity of pollutants, and effect on public safety and the environment.
 - 2) The violator’s knowledge (either negligent or intentional) of the regulation being violated.
 - 3) Any history of violations, including enforcement actions involving the site, business, or individual.

- 4) The effect of the enforcement action to act as a deterrent of similar violations in the regulated community.

D. **LEVELS OF ENFORCEMENT** – Several levels of enforcement actions are available to the City. The typical types of enforcement actions are listed below in increasing order of severity.

E. **INFORMAL ENFORCEMENT ACTIONS** – Each violation will be documented with a written Notice of Violation (NOV) issued by on-site airport personnel. The NOV will require the violating facility to report the incident to the Aviation Environmental Section, 273-8861, within 24 hours of receipt of the NOV. Weekend reporting can be left on the Aviation Department answering machine at the same phone number.

In addition, within fifteen (15) calendar days of receipt of the NOV, the violating facility must submit a detailed written report to the Aviation Environmental Section explaining how the incident took place and the corrective active taken to prevent future occurrences. If the violation was caused by a tenant’s contractor, the contractor shall send a copy of the report the tenant and the tenant is also required to submit a detailed written report. At a minimum, this report must address the following:

- 1) A summary of the name and positions of persons involved in the incident; equipment involved; and how the incident occurred, including time, place and materials and quantity released.
- 2) A detailed description of the investigation and conclusions.
- 3) How cleanup of released materials was performed, including equipment and materials used in the cleanup, and how waste was disposed.
- 4) Corrective action your company has taken or plans to take and the time in which all corrective action will be completed. If corrective action has not been completed within the fifteen (15) period, a compliance schedule must be submitted for approval by the Aviation Department.
- 5) What changes to training, equipment, practice (best management practices), procedures, or personnel have been implemented to prevent future incidents from occurring.
- 6) The report must be signed by the supervisor/manager, and shall contain the following certification:

“I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather an evaluate the information submitted. Based on my inquiry of the persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to

the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.”

Failure to comply with these requirements will subject the violator to future enforcement actions. Compliance with this request does not preclude the City from taking additional enforcement action under its authority: Chapter 32C of the Phoenix City Code.

If additional time is required in order to complete the written report, a written request for an extension must be submitted by the violating facility in time for City approval prior to the due date.

F. AIRPORT TENANT COMPLIANCE

- 1) The Aviation Environmental Section shall notify the Deputy Director of Business and Properties (the “Deputy”) for further enforcement action if any of the following occurs:
 - (a) An airport tenant or permittee (collectively “Tenant”) has received two NOV’s within a twenty-four (24) month period; or
 - (b) The Tenant has failed to timely provide the detailed written report as required under Section I of this policy; or
 - (c) The Tenant fails to comply with the corrective actions that the Tenant submitted under Section I.
 - (d) The Tenant’s failure to follow the airport’s best management practices, or upon recommendation of the Aviation Department Environmental Section.
- 2) Tenant/NPDES Co-permittee - The Aviation Department allowed eligible Tenants to become co-permittees on the City of Phoenix National Pollutant Discharge Elimination System Storm Water Multi-Sector General Permit for Industrial Activities (the “NPDES Permit”) as means to save eligible Tenants substantial costs of obtaining individual NPDES permits. Each Tenant who has joined the City as a Co-permittee (“ a NPDES Co-permittee”) has signed an agreement that sets forth the terms and conditions for being retained on the NPDES permit (the “NPDES Amendment”).

In the event that Section I(F)(1)(a), (b) or (c) of this Policy applies to an NPDES Co-permittee, the Deputy shall notify the tenant/NPDES Co-permittee’s Chief Operating Officer or designee, and shall establish a corrective action plan pursuant to the procedures that have been agreed to by the parties to achieve compliance with the NPDES Permit and Chapter 32C.

If a NPDES Co-permittee fails to comply with a corrective action plan, including best management practices or other requirements, such non-compliance may be deemed to be a material breach of the tenancy agreement or permit and may provide grounds to terminate the tenant's NPDES Co-permittee status and/or its ability to do business on airport property.

- 3) Tenant/Non-NPDES Co-Permittees - If a Tenant who has not signed a NPDES Agreement fails to comply with the NPDES Permit or Chapter 32C, the Environmental Section may refer the Tenant to the appropriate Deputy for further enforcement action or termination of the Tenant's permission to do business on airport property. All airport users should be aware that any industrial discharge or polluted runoff to the storm drain is a violation of federal law, unless it is specifically authorized by a NPDES permit.
- 4) The Provisions of this Subsection I(F) shall be in addition to such other remedies as are provided by this Policy or otherwise provided by law.

G. FORMAL ENFORCEMENT ACTIONS

Compliance Status Review Meeting – In situations where prior enforcement actions have failed to produce compliance or a reasonable commitment to attain compliance by an established deadline, a “Notice of Compliance Status Review Meeting” letter will be issued to the violator, and City representatives. The meeting will be held to present evidence establishing the non-compliance and requesting the violator to “show cause” why the City should not engage in more serious enforcement actions. At the meeting, the City will review the violations, tenant's responses to the violations, explain the City enforcement policies, and identify any potential penalties for non-compliance. An attempt will be made to reach an agreement on the type of compliance activity required. The terms of this Agreement will be contained in a Storm Water Settlement Agreement. If agreement cannot be reached, then the City may utilize all remedies available as it deems appropriate.

SECTION II
STORM WATER DISCHARGE CIVIL PENALTY POLICY

- A. **INTRODUCTION** – The City of Phoenix (City) has developed a Storm Water Civil Penalty Policy (SCPP) for use City-wide that describes how the City will calculate civil penalties for instances of noncompliance with Chapter 32C of the Phoenix City Code. The SCPP is supplementary to Section I of this Policy and is intended for the use of City personnel and does not create any rights or obligations nor should it be used or relied upon by non-City personnel for any purpose. The City reserves the right to act at variance with the SCPP and to change it at any time without public notice.
- B. **PURPOSE** - The purpose of the SCPP is to (1) deter potential violators of the City Storm Water Ordinance (Chapter 32C); (2) provide fair and equitable treatment to the community, (3) facilitate swift resolution of environmental problems; (4) deter future noncompliance by providing an incentive to remain in compliance; (5) remove the economic benefit a person or business gains over others by not complying with the law; and (6) use in potential settlement discussions with violators.
- C. **COSTS** – Any costs associated with the violator(s) (such as sampling, analysis, investigation, surveillance) and any harm done to the environment or damage to City property is not included in the amount of the calculated penalty. Rather, these costs are separate and distinct from civil penalties and can be recovered in addition to any monetary penalty.
- D. **CIVIL PENALTY AUTHORITY** – Civil penalties are authorized under Section 32C-106(e) of the Phoenix City Code. The maximum civil penalty amount that can be imposed is Twenty Five Hundred Dollars (\$25,000) per day for each violation. Each day of continuing violation is a separate civil offense.
- E. **SEEKING CIVIL PENALTIES** – While the City may seek civil penalties for a single violation, generally, the City will seek penalties and damages in addition to cleanup costs under the following circumstances:
- 1) Three or more written notices of violation issued within a two (2) year time period.
 - 2) Failure to discontinue a prohibited action after being made aware of noncompliance.
 - 3) Failure to comply with the written instructions of a Notice of Violation.
 - 4) Any personal injury or property damage caused by the prohibited activity.
 - 5) Any other situation in which the City believes civil penalties are necessary.

EXHIBIT "A"
STORM WATER CIVIL PENALTIES
(Effective March 1997)

Dominant Pollutant	Penalty Base Amount	
	Discharge Less Than 500 Gallons	Discharge Greater Than 500 Gallons
Food-related Oil & Grease	\$ 200.00	\$ 500.00
Septic/Sanitary Waste	\$ 400.00	\$ 600.00
Acids and bases, batteries, cleaning supplies ¹	\$ 600.00	\$1,500.00
Automotive-related or aircraft related products ²	\$ 800.00	\$1,500.00
Gasoline and other fuels ³	\$1,000.00	\$1,500.00
Dissolved metals waste (e.g. Chromium, lead from batteries, etc.)	\$1,000.00	\$2,500.00
Paints, solvents, cleaners (halogen or other organic based type)	\$1,500.00	\$2,500.00
Pesticides/Herbicides	\$1,500.00	\$2,500.00
Medical Wastes (any quantity)	\$2,500.00	\$2,500.00
Mercury (any quantity)	\$2,500.00	\$2,500.00
Any other hazardous waste (as listed in 40 CFR Part 261) not covered above	\$1,500.00	\$2,500.00
Construction, debris, concrete, asphalt, gravel, soil	\$ 300.00 per incident	N/A
Hazardous substance, asbestos, etc.	\$1,500.00	\$2,500.00
Super-chlorinated water (ex: from aircraft backflushes)	\$ 400.00	N/A

The base amount of the civil penalty can be increased (not to exceed \$2,500.00, per violation), decreased (but not less than \$500.00, per violation) or remain the same after consideration of the following:

- 1. The seriousness of the violation;**
- 2. Any history of such violation;**
- 3. Any good faith efforts to comply with the applicable requirements;**
- 4. The economic impact of the penalty on the violator; and**
- 5. Such other factors as justice may require.**

¹ Acids include materials labeled as such (e.g., hydrochloric acid, sulfuric acid, etc.) or any materials with a pH of 4.0 or less.

Bases include materials labeled as such (e.g., sodium hydroxide, pH increaser, caustic soda, lye, etc.) or any materials with a pH of 10.0 or greater.

² "Automotive-related products" include engine oil, lube oils, brake fluid, transmission fluid, gear oil, anti-freeze, cleaners (carburetor, brake, engine, etc.) and other products used for vehicles or aircraft but does not include solvents, gasoline and other fuels.

³ "Other fuels" include gasoline, aviation gas, diesel, kerosene, jet fuels or other petroleum based products used to run equipment or vehicles.

NOTICE OF STORM WATER VIOLATION INSTRUCTIONS

Your Company Is Required To:

- A. Immediately take measures to safely mitigate the impact of your release, or threatened release, to the environment. Obtain spill control equipment or perform measures to contain the release and clean the area. If so directed by Fire or Aviation Department personnel, an environmental emergency response contractor will be hired by your company.
- B. Supervisor/manager must call the airport Environmental Section at 602-273-3340 within 24 hours to report and acknowledge receipt of the Notice of Violation. Night and Weekend reporting can be left on the Aviation Department answering machine at the same phone number.
- C. **If your company was performing services for the airport or tenant when the incident occurred, report the incident to the airport or tenant.**
- D. Within 15 calendar days of the date of this Notice, submit a detailed written report on the Company Letterhead explaining why the incident occurred and the corrective action taken to prevent future occurrences. The letter is to be signed by original wet signature or legally binding secure electronic signature. At a minimum, the report must address the following:
 - 1) A summary of the names and positions of persons involved in the incident; equipment involved; how the incident occurred, including time, place, and materials and quantity released.
 - 2) A detailed description of the investigation and conclusions.
 - 3) How cleanup of released materials was performed, including equipment and materials used in the cleanup, and how waste was disposed.
 - 4) Corrective action your company has taken or plans to take and the time in which all corrective action will be completed. If corrective action has not been completed within the 15-day period, a compliance schedule must be submitted for approval by the Aviation Department.
 - 5) Please detail what changes to training, equipment, practices (control measures); procedures, or personnel have been implemented to prevent future incidents from occurring.
 - 6) The report must be signed by the supervisor/manager and shall contain the following certification:

“I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.”

This report is due in 15 calendar days from the date of this Notice and shall be mailed or delivered to:

**City of Phoenix Aviation Department
Planning & Environmental Division/Environmental Section
2485 E. Buckeye Road
Phoenix, Arizona 85034**

cc: To the company for whom you were performing services, if applicable.

Should you require additional time in order to complete the report, a request for an extension must be submitted to Planning & Environmental Division and approved prior to the due date.

FAILURE TO COMPLY WITH THE REQUIREMENTS OF THIS NOTICE WILL SUBJECT YOU TO FURTHER ACTION AND MAY JEOPARDIZE YOUR COMPANY'S STATUS AS A NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) CO-PERMITTEE AND/OR YOUR AUTHORIZATION TO CONDUCT BUSINESS ON AIRPORT PROPERTY. COMPLIANCE WITH THIS NOTICE DOES NOT PRECLUDE THE CITY FROM TAKING ADDITIONAL ENFORCEMENT ACTION UNDER CHAPTER 32C OF THE PHOENIX CITY CODE.

City of Phoenix Aviation Department

POLLUTION PREVENTION TEAM

Ms. Lauren Buseman
City of Phoenix Aviation Department
Planning & Environmental Division
2485 E. Buckeye Road
Phoenix, AZ 85034
AVN-Stormwater@phoenix.gov

Subject: Spill Prevention, Control, and Countermeasure (SPCC) Plan
Annual Review Certification

Dear Ms. Buseman :

This letter acknowledges that _____ reviewed their facility Spill Prevention, Control, and Countermeasure (SPCC) Plan (Plan) on _____.

In the past year, there has not been a change in the facility's design, construction, operation, or maintenance that materially affects the facility's potential for an oil discharge. Changes that would trigger a required update to the SPCC plan are listed on page 2. We understand that if relevant changes occur at the facility, an amendment is required to the Plan.

Changes 1 through 6 trigger a technical amendment to the Plan to address changes and updates must be certified by a Professional Engineer (PE). A Manager may do non-technical amendments, including Changes 7-8. In the future, if an amendment is required, we understand that it must occur no later than six (6) months after the change occurs and that the Plan must be implemented as soon as possible following any technical amendment, but no later than six (6) months from the date of the amendment. Once the Plan has been amended, we will send in a revised and certified copy to the City of Phoenix Aviation Department.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Thank you,

(Signature)

SPCC Plan – Annual Review Certification

Page 2

Changes that require a technical amendment:

1. Commissioned or decommissioned any containers;
2. Replaced, reconstructed, or moved any containers;
3. Reconstructed, replaced, or installed any piping systems;
4. Conducted any construction or demolition that has altered secondary containment structures;
5. Changed any products or services; or
6. Revised the standard operation, modified testing/inspection procedures, or used new or modified industrial standards or maintenance procedures.

Changes that require a non-technical amendment:

7. Change in the name or contact information of individuals responsible for the implementation of this Plan; or
8. Change in the name or contact information of spill response or cleanup contractors.

Appendix K - Routine Site Inspection Guidance Document

ROUTINE SITE INSPECTION REQUIREMENTS

Submit Inspection Documentation to AVN-Stormwater@phoenix.gov

As stated in the Stormwater Pollution Prevention Plan, it is required to conduct four Quarterly Routine Site Inspections (RSI) annually for Notice of Intent (NOI) permit holders at each City of Phoenix Airport. The City of Phoenix Aviation stormwater inspectors (Aviation) or their consultant stormwater inspectors typically conducts these RSIs. However, Aviation is offering selected co-permittees to conduct self-inspections based on their compliance history. This document outlines the submittal requirements of the PPT conducted quarterly RSIs.

Aviation will provide the quarters the RSIs will be conducted by the PPT member. PPT members shall submit RSI inspection documents to your assigned inspector for approval to satisfy the designated quarterly RSI requirement. Currently only two quarters per year may be authorized for PPT member to conduct their own RSI. The remaining two RSIs will be conducted by Aviation stormwater inspectors. Aviation stormwater inspectors will also continue to conduct "Wet" quarterly RSIs, regardless of the quarter.

PPT conducted RSI submittal must include the information listed below:

GENERAL INFORMATION

- Name and address of facility
- Contact name
- Contact number
- Date of inspection submittal
- Name of airport for which this inspection applies
- Hours of operation

DOCUMENTATION

- Completed monthly self-inspection forms
- Stormwater training certificates/training rosters for all new employees
- Chemical storage inventory

INSPECTION PHOTOS OF APPLICABLE AREAS

- AVE Maintenance Areas
- AVE Cleaning Areas
- AVE Storage
- Material Storage Areas
- Fuel Systems and Fueling Areas
- Building and Ground Maintenance Areas
- Spill Kits
- Trash Areas

Appendix L - Routine Site Inspection Form (Blank)

The quarterly inspection forms for each company are included in the City of Phoenix Aviation Department stormwater database. Please contact Lisa Farinas for more information.

TRAINING (VISUALLY VERIFIED)				
1.10	AVN Stormwater training documented (SWPPP training certificates available)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.11	Stormwater training for employees documented (SWPPP sign in sheets and/or training certificates available)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.12.1	Service Provider/Contractor education documented (10.8)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.8	Spill response training for employees performing fueling activities documented	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
REGULATED WASTE				
8.12	Regulated waste generation and disposal documentation available (COP acknowledges documentation was available, but does not verify accuracy)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
WASH PLAN (Wash Service Providers)				
3.10	Wash plan submitted and approved by Aviation within previous 2 years (3.11)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
SPCC PLAN (facilities with cumulative 1,320 AST or 42,000 UST)				
5.15	Annual SPCC review certification submitted to Aviation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.15.1	SPCC Plan provided to Aviation to reflect most recent facility changes/updates	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.9	Fueling areas, fueling vehicles/equipment, and storage tanks inspection records (6.10)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
DEICING				
11.9	Monthly deicing inspection records for Nov-Feb and other months in which deicing occurs. Inspection documents submitted to AVN-Stormwater@phoenix.gov .	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):				

Activity Specific CMs

CM	CM – GENERAL (1)	Yes	No	N/A	Addressed
1.6.4	Signs of spill track out (drive through)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.7.1	Spill(s) or staining observed (during inspection)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.7.2	Used spill response materials on ground (not properly disposed)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.1	Materials stored/activities conducted indoors and/or under cover	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.2	Exposed areas clean and orderly	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.4	Spill Response Plan posted	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.8.2	“Do Not Use for Wash Down or Rinsing of Equipment” signs posted near outdoor hose bibs	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10.1	Conditional Approval obtained through the TI Program prior to construction	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
SPILL KITS					
1.5.1	Spill kits located in areas where spills are likely to occur	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.5.2	Spill kits stocked with adequate materials for activities conducted in area	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.5.3	Spill kit(s) properly labeled	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.5.4	Spill kit(s) have a lid	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.5.5	Spill kits free of trash, debris or used absorbent materials	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.7	Spill kits located on maintenance vehicles and in maintenance areas	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.8	Battery acid spill kits maintained by single point battery water stations	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.6	Spill kits maintained on mobile refuelers and at fuel stations	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.6	Spill kits maintained on lavatory service vehicles	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):					

CM	CM – AVE MAINTENANCE (2)	Yes	No	N/A	Addressed
2.1	Vehicle and equipment maintenance performed indoors or under storm-resistant cover when feasible	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.2	Cleaning and other products used indoors or under cover	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.3.2	Maintenance performed away from stormwater inlets	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.5	Vehicles and equipment properly maintained and not leaking	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):					

Activity Specific CMs

CM	CM – AVE CLEANING (3)	Yes	No	N/A	Addressed
3.3	Evidence of washing outside of designated area	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.7.4	Evidence of washing residues not collected during washing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.3.1	Wash area is covered and paved	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.3.2	Wash area labeled	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.8	Wash area free of cracks or gaps in berms or surfaces	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):					

CM	CM – AVE STORAGE (4)	Yes	No	N/A	Addressed
4.1	AVE storage area paved and properly maintained	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.2	AVE stored away from stormwater inlets	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.4.1	Fluids and batteries removed from AVE stored long-term (>30 day) (Unless approved by Aviation)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.4.2	Stored AVE are free of excess buildup of grease/oil on equipment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.5.1	Drip pans or absorbent pads used to contain leaks when needed	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.5.2	Drip pans and absorbent pads in good condition and not overflowing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):					

CM	CM – MATERIAL STORAGE AREAS (5)	Yes	No	N/A	Addressed
5.1	Containers free of excessive oil/grease buildup	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.2.2	Materials stored indoors or under storm resistant cover	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.5	Liquids used, stored, and transferred in paved areas, away from stormwater inlets	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.6.1	Materials and liquids stored with secondary containment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.6.2	Secondary containment is free of liquids and/or debris	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.6.3	Secondary containment is adequately sized	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.6.4	Secondary containment is in good condition, free of cracks, holes, etc.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.8	Materials stored in appropriate containers	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.9.1	Containers clearly labeled (5.9.2)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.10	Materials orderly and waste collection piles, “bone yards”, eliminated	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.14	Material and liquid storage containers are in good condition (i.e., free of cracks, properly closes, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):					

Activity Specific CMs

CM	CM – FUEL SYSTEMS AND FUELING AREAS (6)	Yes	No	N/A	Addressed
6.1	Designated paved and contained areas to park mobile refueling equipment/vehicles	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.3	Vehicle fueling station fitted with “Do Not Top Off” signs	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.7.2	Aircraft fuel samples properly collected, stored and recycled (6.7.1)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):					

CM	CM – BUILDING AND GROUNDS MAINTENANCE (7)	Yes	No	N/A	Addressed
7.3.2	Evidence that wash water was not collected and disposed of properly from exterior ground surfaces cleaning	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7.4.1	Evidence interior floor cleaning water disposed of in proper location (OWS, Mop Sink, SS)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7.5	Litter, garbage, landscape waste, sweepings and sediment disposed of properly	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7.6.1	Stormwater inlets cleaned/maintained	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7.6.2	Filter fabric used in stormwater inlets and in good condition	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):					

CM	CM – RECYCLING, WASTE HANDLING AND DISPOSAL (8)	Yes	No	N/A	Addressed
8.2.1	“Used Batteries” labeled, stored with secondary containment, and indoors/under cover	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.3.2	“Used oil containers and filters” labeled, stored with secondary containment, and indoors/under cover	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.8.1	Garbage and unusable material disposed of properly	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.8.2	Garbage regularly picked up (dumpster not overloaded with material)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.9.1	Trash receptacles have lids	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.9.2	Dumpster lids closed	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.9.3	Dumpster drains equipped with plugs	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.9.4	Trash cart(s), trash can(s), or dumpster(s) free of leaks	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.9.5	Garbage collection area properly maintained	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):					

CM	CM – LAVATORY (9)	Yes	No	N/A	Addressed
9.2.2	Hoses, valves and equipment properly secured	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.5	Lavatory waste disposed of in proper location	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.6	Caps secure on lavatory cart/vehicle and on hose connections	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.2.7	Lavatory vehicle/cart regularly emptied to prevent waste overflow	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Comments (reference CM No.):					

INSPECTION SUMMARY

Notes

Positive Comment

INSPECTOR SIGNATURE		TIME COMPLETE	PPT MEMBER INITIALS
I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Identify probable sources of any observed stormwater contamination. Also, include any additional comments, descriptions of pictures taken, and any corrective actions necessary below (attach additional sheets as necessary). Attach pictures with descriptions as “x of Outfall 1”, “x of Outfall 2”, etc.

► Notes

Outfalls are listed in the order in which they were assessed, not numerical order.

The 72-hour interval can be waived when the previous storm did not yield a measurable discharge or if you are able to document (attach applicable documentation) that less than a 72-hour interval is representative of local storm events during the sampling period.

Debris is not a required water quality characteristic to be examined during a visual assessment. As a preventative measure debris, is removed when observed at an outfall.

Outfalls 2 and 3 drain areas where industrial activities do not occur and therefore are not sampled, as stated in the PHX SWPPP.

Normal stormwater samples are generally clear to light tan and slightly cloudy. Investigations will not be initiated for such samples.

Sample observed for settled solids after allowing the sample to sit for approximately one-half hour.

Colors correspond to drainage areas indicated in Figure 3 of the SWPPP.

► Certification Statement

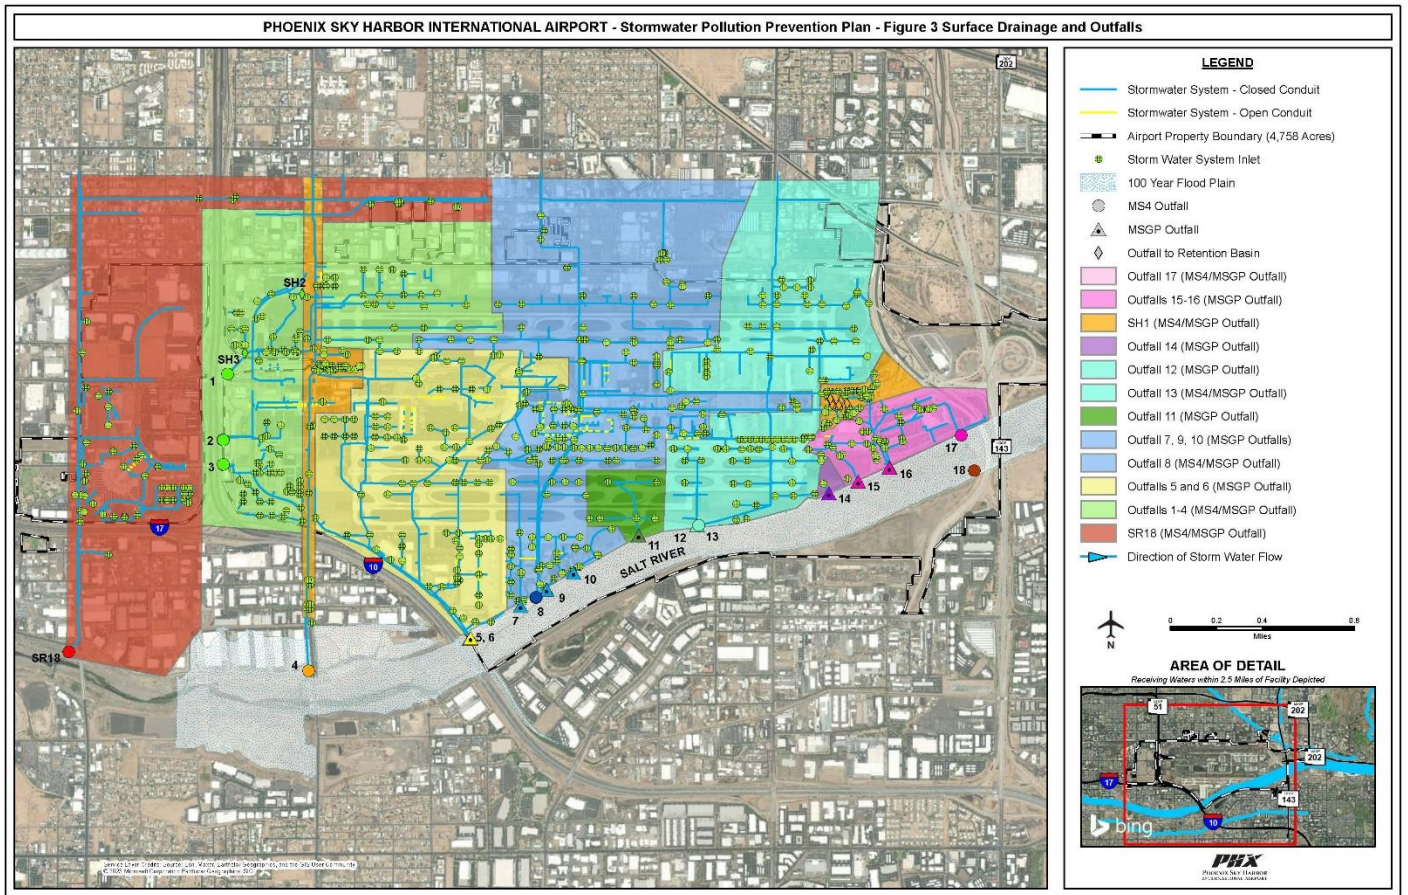

“I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.”

**Appendix Q - Corrective Action Report Form
(Blank)**

Corrective Action Report

As required by MSGP-2010, Part 3.3, within 72 hours of discovery of any conditions listed in Part 3.1, the permittee shall identify the condition triggering the need for corrective action review, a description of the problem identified and the date the problem was identified, which shall be maintained with this SWPPP. In addition, within 14 calendar days of discovery of any condition listed in Part 3.1, the permittee shall summarize the corrective action taken or to be taken, whether SWPPP modifications are required as a result of this discovery or corrective action, the date the corrective action was initiated or will be initiated and the date the corrective action was completed or is expected to be completed, which shall be maintained with the SWPPP.

Fill out the following information within 72 hours of discovering a problem triggering a corrective action.			
Date Problem Identified:	<Enter Date>		
Triggered Condition(s) (check one):	<input type="checkbox"/> An unauthorized discharge (e.g., discharge of non-stormwater not authorized by the permit) to a water of the U.S. or to a regulated MS4 occurs at the facility		
	<input type="checkbox"/> A discharge violates a numeric effluent limitation guideline		
	<input type="checkbox"/> Facility discharge cause or contributes to an exceedance of an applicable water quality standard or an adopted waste load allocation		
	<input type="checkbox"/> Modification to the control measures are necessary to meet the permit requirements in MSGP-2010 Part 2.2		
Describe Identified Problem:	<Enter Brief Description>		
Fill out the following information within 14 calendar days of discovering a problem triggering a corrective action.

Signatory Authorization Form

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Jordan D. Feld, CM, AICP

Date

Deputy Aviation Director - Planning & Environmental
City of Phoenix Aviation Department

In accordance with Appendix B, Part 9, the individual listed above is empowered to make this certification. Any other individual making this certification must be designated as a signatory authority, based on written delegation of authority from the Aviation Director.

City of Phoenix
AVIATION DEPARTMENT

November 6, 2015

Mr. Trevor Baggione
Water Quality Division Director
Arizona Department of Environmental Quality
1110 West Washington Street
Phoenix, Arizona 85007

Subject: Authorization Letter for Delegation of Authority for Arizona Pollutant Discharge Elimination System General Permit for ADEQ Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activities at Phoenix Sky Harbor International, Phoenix Deer Valley, and Phoenix Goodyear Airports

Dear Mr. Baggione:

This letter is to inform you that Mr. Jordan D. Feld, Deputy Aviation Director, is the duly authorized representative for signature on Notices of Termination, Stormwater Pollution Prevention Plans, reports, certifications, or other information required by the permit and other information requested by ADEQ.

The documents to be signed will include the following certification statement:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have any questions, please contact Ms. Lisa Farinas, Environmental Quality Specialist, at 602-722-6173.

James E. Bennett, A.A.E.

Appendix U - Wash Plan Requirements

City of Phoenix Aviation Department

POLLUTION PREVENTION TEAM

WASH SERVICE PROVIDER - WASH PLAN REQUIREMENTS

Submit Wash Plans to AVN-Stormwater@phoenix.gov

As required by this Stormwater Pollution Prevention Plan, a wash plan for each service provider for each City of Phoenix (COP) Airports must be submitted to, and approved by, the COP Aviation Department prior to any washing operations. This document outlines the required wash plan components.

No washing operations may be conducted until all the requested information has been obtained and approved by the COP Aviation Department. If there are any proposed changes to an existing approved wash plan, the COP Aviation Department must be notified prior to implementing the changes and an updated plan must be submitted and approved. Wash plans must be revised every 3 years.

GENERAL INFORMATION

- Name of Wash Service Provider
- Contact Name
- Contact Number
- Date of wash plan submittal
- Name of Airport for which this plan applies
- Hours of washing operations

AIRCRAFT, VEHICLE AND EQUIPMENT (AVE) WASHING METHOD/OPERATIONS

The methods must include the following information:

- Type of AVE intended for washing (i.e., private aircraft, cargo aircraft, airline aircraft, vehicle, airline equipment)
- Name of client(s) & frequency for which work will be conducted
- Method of application (i.e., Power washer, hand application, dry wax, etc.)
- Containment and/or retrieval methods (i.e., ramp scrubber, wash rack, booms, berms, etc.)
- Retrieved wash water disposal/elimination methods (i.e., numbered oil water separator or numbered interceptor, offsite disposal)
- If using COP wash rack, estimated volume of water used per wash (may provide duration of wash event)
- List of products used (must attach SDSs for each)
- Estimated volume of product used per wash
- Location of Washing (i.e., Concourse and Gate, must also be indicated on attached map)

REQUIRED ATTACHMENTS

SITE MAP

Site map of area(s) in which washing will occur. The site must contain the following:

- Storm drain inlet locations
- Washing area location/outline (include location[s] of control structures)
- Distance (in feet) from washing area to nearest drain(s)
- Reference building/terminal/road, etc.
- North arrow

Appendix 3 – The control measures were updated to make them more concise and more consistent across control measure categories. 7. Appendix 5 – The list of spills, leaks and releases was replaced with information from 2016-2018 8. Appendix 6 – The Spill Response Plan Replaced was replaced with the updated version. 9. Appendix 7 – Updated to include training attendance sheets for 2016-2018 10. Appendix 8 – Updated to include the current quarterly inspection form. 11. Appendix 9 – Updated to include the current visual assessment form. 12. Appendix 10 – Updated to include the current comprehensive inspection form. 13. Appendix 12 – Updated to include corrective actions reports for 2016-2018. 14. Appendix 13 – Updated to include the 2016, 2017, and 2018 annual reports. 15. Appendix 14 – The authorization letter was replaced. 16. Appendix 15 – The table was updated to reflect changes to the current version of the SWPPP.

2019	<ol style="list-style-type: none"> 1. Seal page – The seal page was updated for certification of the current SWPPP. 2. Acronyms – List was updated to reflect MSGP requirements and terms. 3. Section 1 – The SWPPP was reorganized to follow the order listed in MSGP Part 5.1. Section was updated to reflect the new SWPPP organization and requirements. 4. Section 2 – Description of PPT member was moved from other sections and grouped under this single section. Text related to the permit was updated to align with MSGP requirements. Tables 2-1 and 2-2 were added to fulfill requirements MSGP Part 8.S.3.3. 5. Section 3 - Aviation Services was moved to this section to align with MSGP organization. General Location information was moved to Section 4 with the Site Map Requirements, to align with the organization per MSGP Part 5.1. 6. Section 4 – Site Maps section was added to describe the requirements of MSGP Part 5.1.2 and follow the MSGP organization. Table 4-1 was added to reference where MSGP required information is included on the Figures. 7. Section 5 – The section was reorganized for ease of locating information. The text was updated to reflect current site conditions and operations. 8. Section 6 – The section was created to consolidate information on spills and leaks into a single location and follow the SWPPP requirements of MSGP Part 5.1. 9. Section 7 – The section was created to follow the SWPPP requirements of MSGP Part 5.1. The list of allowable non-stormwater discharges was updated according to MSGP Part 1.1.3.1. Descriptions of the allowable non-stormwater discharges and whether they are likely to occur at PHX was added. The corrective actions section was updated per the requirements of MSGP Parts 3.1 and 3.2. 10. Section 8 – The list of control measures to select from was updated to align with MSGP Part 2.2.1.1. Litter Garbage and Floatable Debris CM was removed from this section, as it is not required by the MSGP, but PHX will continue to implement specific CMs related to waste handling and disposal included in Appendix D. 11. Section 9 – Section title and contents were updated to align with requirements of MSGP Part 5.1. Training requirements were updated per MSGP Part 2.2.1.2.8. 12. Section 10 – Section was added and information was moved from the previous section to align with requirements and organization of MSGP Part 5.1. Inspection requirements were updated to remove the Comprehensive Facility Inspection and create the Routine Site Inspection per MSGP Part 4.1. 13. Section 11 – Section was added and information was moved from previous sections to align with requirements of MSGP Part 5.1. A list of the outfalls, their location, and whether they are sampled was added to meet the requirements of MSGP Part 5.1. Verbiage was added to cover the requirements of MSGP Part 8.S.8. A description of visual assessment procedures and communications with PPT members about visual assessments was added to comply with MSGP Part 8.7.8. 14. Section 12 – Section was added to align with requirements of MSGP Part 5.1. Information was included to comply with MSGP Part 6.1.1. 15. Section 13 – Section was reorganized and information was added on requirements for PPT members, as well as Aviation. Section was also updated to include new SWPPP certification requirements per MSGP Part 8.S.3.3. 16. Section 14 – Section was added and information was moved from other sections to align with the organization and requirements of MSGP Part 5.1. Reporting requirements were updated to more closely align with MSGP Appendix B. Recordkeeping requirements were updated to comply with MSGP Part 7.4. 17. Section 15 – Modification requirements were updated to align with MSGP Part 5.3. The modifications table was moved from an appendix into the SWPPP text. 18. Section 16 – Wording was updated to align with MSGP Part 5.4. 19. Figures: <ul style="list-style-type: none"> ■ Figure 1 - Added to meet requirements of MSGP Part 5.1.2. ■ Figures 2-5 – Numbering was updated. Contents were updated to reflect current site conditions.

SWPPP Modification History	
Date	Revision
	<p>20. Appendices:</p> <ul style="list-style-type: none"> a. Appendices were changed from Appendix 1 – 15 to Appendix A - P. Order of the appendices was updated to follow contents of the SWPPP. b. Information within the Appendices was updated to reflect MSGP requirements and current site conditions. c. Former Table 2-1 was moved to Appendix A. d. Former Table 4-1 was moved to Appendix B. e. Appendix D Control Measures: <ul style="list-style-type: none"> o General – Updated for consistent wording, to refer to “stormwater inlets” throughout. o General - Reorganized CMs to be consistent with MSGP CM organization. o General – Added CMs to specify location documents are kept to comply with MSGP requirements. o CM 9 – OWS were removed from this CM and moved to CM 1. f. Appendix H – Former “Quarterly” Inspection form was updated to “Routine Site Inspection” form to comply with MSGP Part 4.1. Comprehensive Facility Inspection form was removed. g. Appendix K – Routine Site Inspection of Outfalls Inspection Form was added to comply with MSGP Part 4.1.1 requirements that routine inspections check outfalls and site perimeter for run on. h. Appendix L – R&R 01-02 was added. i. Annual Reports Appendix was removed, as the MSGP does not require Annual Reports. j. Appendix O – Added to include the PPT member SWPPP certification required by MSGP Part 8.S.3.3.
2020	<ul style="list-style-type: none"> 1. Figures <ul style="list-style-type: none"> a. Figure 2 was updated to reflect current site conditions including updating PPT member activity areas, potential pollutants, activities and stormwater control features. Symbols were updated to differentiate features. b. Figure 3 symbols were updated to differentiate features. c. Figure 4 was updated to include additional significant spill locations in 2020. Symbols were updated to differentiate features. 2. Appendices <ul style="list-style-type: none"> a. Appendices C and D – Pollution Prevention Team Members and Activities were updated to reflect current site conditions b. Appendix F – Spill Report was updated to include additional significant spill locations.

SWPPP Modification History	
Date	Revision
2021	<ol style="list-style-type: none"> 1. Table of Contents – The SWPPP was reorganized to reduce duplicative text and enhance usability. Sections were combined including 3 and 4; 8 and 9; and 12, 13 and 14. Section numbers were updated to be sequential following the reorganization. 2. Section 1 was updated to provide clarity on applicability, describe the reorganized SWPPP structure and provide an accurate description of the stormwater program. 3. Section 2 was updated to differentiate between co-permittee and non-co-permittee facilities and to include applicable roles and responsibilities. 4. Section 3 was updated to include a complete description of the site and provide clarification on requirements of site maps. 5. Section 4 was updated to reflect current site conditions. Targeted pollutants and general descriptions of control measures were removed from the text to avoid duplication with the Control Measures now included in Appendix A. 6. Section 5 was condensed to remove redundant text. 7. Section 6 was updated to describe the process for evaluating non-stormwater discharges. The sub-section for Corrective Actions was moved to the Reporting section for usability as this requirement applies to multiple situations. 8. Section 7 was updated to reflect current site conditions including the addition of structural control measures. Training descriptions were updated to match Aviation’s process and the MSGP requirements. 9. Section 8 was updated to clearly distinguish requirements for inspections. A subsection was added for monthly self-inspections and monthly deicing inspections for those that deice, as guidance for PPT members. 10. Section 9 was updated to reflect Aviation’s current processes and to identify non-applicability to specific sampling requirements identified in the MSGP. 11. Section 10 was updated to include requirements for reporting in one section and incorporate Aviation’s rules and regulations reporting. 12. Section 11 was updated to include requirements related to administration of the SWPPP in one location. The revision history table was moved to the appendices to allow for easier updates. 13. Figures <ol style="list-style-type: none"> a. Figure 1 property boundary was updated to reflect current site conditions. b. Figure 5 was removed as it was not a requirement of the MSGP. 14. Appendices <ol style="list-style-type: none"> a. Appendices were rearranged such that control measures were first and the remaining appendices are ordered as they appear in the SWPPP. The MSGP file was removed from the appendices and incorporated as a link to the online file. b. Appendix A – Control Measures was updated to reflect current Aviation processes and provide greater clarity and guidance to PPT members. c. Appendices C and D – Pollution Prevention Team Members and Activities were updated to reflect current site conditions d. Appendix F – Spill Report was updated to include additional significant spill locations. e. Appendix I – SPCC Annual Review Form was added as a new appendix. f. Appendix K – Self-inspection Form was added as a new appendix. The form was revised to include deicing inspection criteria for those that deice. g. Appendix N – Corrective Action Template was updated to include the revised form. h. Appendix Q – Revision History was added as a new appendix and updated with revisions.
2022	No updates were made to the SWPPP.

SWPPP Modification History	
Date	Revision
2023	<ol style="list-style-type: none"> 1. Seal page – The seal page was updated for certification of the current SWPPP. 2. Acronyms – List was updated to reflect MSGP and terms used in the this SWPPP. 3. Table of Contents – page numbers, heading, and tables were updated to align with SWPPP contents. 4. Section 1 was updated to reference the September 2021 MSGP modifications and define key program roles. 5. Section 2 was updated to include PPT member tiers. 6. Section 3 was updated to include current airport information. 7. Section 4 was updated to reflect current site conditions. 8. Section 5 was updated to reflect current site conditions. 9. Section 6 was updated to reflect current site conditions. 10. Section 7 was updated to reflect current site conditions. Training descriptions were updated to match the current process. 11. Section 8 was updated to include the option for PPT member-conducted RSIs and clarify wet inspection requirements for mobile service providers. 12. Section 9 was updated to reflect Aviation’s current processes and include 5-day written reports. 13. Section 10 was updated to clearly outline the reporting requirements for corrective actions. 14. Section 11 was updated to include signature requirements for 5-day reports and requirement to e-sign NOIs and NECs. 15. Figures <ol style="list-style-type: none"> a. Figure 2 was updated to reflect current site conditions including updating PPT member activity areas, potential pollutants, activities and stormwater control features. b. Figure 4 was updated to include additional current spill locations and to reflect current PPT areas. 16. Appendices <ol style="list-style-type: none"> a. Appendices were renumbered to reflect addition of new appendices listed below. b. Appendix A – Control Measures was updated to reflect current Aviation processes, provide greater clarity, and remove duplicate requirements. c. Appendix B – PPT Member Tier Responsibilities, Communication and Recordkeeping was added to define PPT Members applicable roles and responsibilities. d. Appendix C – The NOI was replaced with the current NOI and Notice of Intent Authorization Certificate was added. e. Appendices D and E – Pollution Prevention Team Members and Activities were updated to reflect current site conditions f. Appendix G – Spill Report was updated to include current list of significant spills. g. Appendix J – SPCC Annual Review Certification template was replaced with the current template. h. Appendix K – Routine Site Inspection Guidance Document was added to layout requirements for PPT member-conducted RSIs. i. Appendix L – RSI Form was replaced with current form. j. Appendix M – Self-inspection Form was replaced with current form. k. Appendix P – 5-Day Written Report template was added for use in preparing 5-Day Written Reports to ADEQ. l. Appendix R – Spill Report Email template was added to provide guidance on information required following a spill. m. Appendix T – SWPPP Certification Form template was replaced with the current form. n. Appendix U – Wash Plan Requirements was added to provide guidance on preparing a wash plan. o. Appendix V – Deicing Inspection Form was added for use in monthly deicing season inspections. p. Appendix W – Revision History was updated to reflect the current SWPPP revisions.
