

Permit No. AZMSG2024-001

**STATE OF ARIZONA
DEPARTMENT OF ENVIRONMENTAL QUALITY
WATER QUALITY DIVISION
PHOENIX, ARIZONA 85007**

**ARIZONA POLLUTANT DISCHARGE ELIMINATION SYSTEM
GENERAL PERMIT FOR STORMWATER DISCHARGES
ASSOCIATED WITH INDUSTRIAL ACTIVITY
TO PROTECTED SURFACE WATERS**

This permit provides authorization to discharge under the Arizona Pollutant Discharge Elimination System (AZPDES) program, in compliance with the provisions of the Arizona Revised Statutes (A.R.S.), Title 49, Chapter 2, Article 3.1, the Arizona Administrative Code (A.A.C.), Title 18, Chapter 9, Article 9 and Chapter 11, Article 1, and the Clean Water Act as amended (33 U.S.C. 1251 *et seq.*).

This general permit specifically authorizes stormwater discharges associated with categories i, ii, iv through ix and xi under 40 CFR 122.26(b)(14) (non-mining industrial activities) in Arizona to Protected Surface Waters, pursuant to federal conditions in 40 CFR 122.26 (WOTUS) and state conditions in A.R.S. Title 49 Chapter 2, Article 3.1 *et seq.* (non-WOTUS). State requirements for discharges to non-WOTUS protected surface waters are adopted pursuant to A.R.S. § 49-255.04 and are enforceable solely by the Arizona Department of Environmental Quality (ADEQ). All discharges authorized by this general permit shall be consistent with the terms and conditions of this general permit.

This general permit is effective on January 16, 2025.

This general permit and the authorization to discharge expire at midnight, January 15, 2030.

Signed on 1/13/2025

Appendix B. Standard Permit Conditions
Appendix C. Facilities and Activities Covered
Appendix D. Calculating Hardness in Protected Surface Waters Receiving Stormwater Discharges for Hardness-Dependent Metals

1.0 Coverage Under this Permit

1.1 Permit Eligibility

To be eligible for authorization under this permit, the site must discharge stormwater associated with industrial activity (as defined in Arizona Administrative Code, R18-9-A902(B)(8)(a)) to waters on the protected surface water list, which includes waters of the U.S. (WOTUS) and non-WOTUS protected surface waters, either directly or by means of a conveyance. The requirements applicable to discharges to non-WOTUS protected surface waters are adopted pursuant to state law only, and enforceable solely by ADEQ. EPA, not ADEQ, is the permitting authority for those discharges in Indian Country.¹

Industrial stormwater discharge associated with mining activities must seek coverage under a separate permit.

If a site is not eligible for authorization under this permit because stormwater is not discharged to a protected surface water, the operator may elect to apply for a No Discharge Certification through the electronic permitting process in myDEQ, if available.

1.1.1 Industrial Activities and Facilities Covered

This general permit authorizes stormwater discharges or allowable non-stormwater discharges, associated with “industrial activities” as defined in Appendix A, provided the site’s primary industrial activity is included in Appendix C, Table C-1, or otherwise designated by the director in accordance with A.A.C. R18-9-A902(B)(8)(d).

This permit does not authorize industrial stormwater discharges from sites on any Indian Country lands in Arizona. U.S. EPA Region IX is the permitting authority for Indian Country lands in Arizona.

1.1.2 Allowable Stormwater Discharges

The following discharges are eligible for coverage under this permit:

1. Stormwater discharges associated with industrial activity for any primary industrial activities and co-located industrial activities, as defined in Appendix A, except for any stormwater discharges specifically prohibited in Part 8;
2. Discharges designated by ADEQ as needing a stormwater permit as provided in Sector AD;
3. Discharges that are not otherwise required to obtain AZPDES permit authorization but are commingled with discharges that are authorized under this permit; and
4. Discharges subject to any of the national stormwater specific effluent limitations guidelines listed in Table 2.2.

1.1.3 Allowable Non-Stormwater Discharges for all Sectors of Industrial Activity

Part 1.1.3.1 identifies the non-stormwater discharges allowed under this permit provided appropriate control measures are designed, implemented, and maintained to reduce the discharge of pollutants, including erosion and sedimentation, and do not cause or contribute to the instream exceedance of an applicable surface water quality standard.

¹ The State of Arizona, Department of Environmental Quality, Water Quality Division, does not have permitting authority for Indian Country (definition in Part VII.B. of this permit). Authorization for MSGP discharges in Indian Country must be obtained through US EPA Region IX or other appropriate authority.

Allowable non-stormwater discharges can be mixed with a discharge authorized by a different AZPDES permit and/or a discharge that does not require AZPDES permit authorization.

1.1.3.1 Allowable Non-Stormwater Discharges for all Sectors of Industrial Activity

When conducted in accordance with Part 1.1.3, the following non-stormwater discharge activities or sources are allowed:

1. Emergency/unplanned fire-fighting activities;
2. Fire-fighting system testing and maintenance, including hydrant flushings;
3. Installation and maintenance of potable water supply systems, including disinfection and water line flushing activities, discharges resulting from pressure releases or overflows, and discharges from wells approved by ADEQ for drinking water use;
4. Uncontaminated condensate from air conditioners, evaporative coolers, and other compressors and from the outside storage of refrigerated gases or liquids;
5. Irrigation drainage and irrigation line flushing;
6. Landscape watering provided all pesticides, herbicides, and fertilizer have been applied in accordance with the approved labeling;
7. Pavement wash waters where no detergents or cleaning agents are used, and measures are first taken to remove/pickup solids and liquids, and properly disposed;
8. Routine external building washdown / power wash water that does not use detergents or hazardous cleaning agents (e.g., those containing bleach, hydrofluoric acid, muriatic acid, sodium hydroxide, nonylphenols);
9. Water used to control dust, provided effluent or other wastewaters are not used;
10. Uncontaminated groundwater or spring water;
11. Foundation or footing drains where flows are not contaminated with process materials such as solvents;
12. Incidental windblown mist from cooling towers that collects on rooftops or adjacent portions of the site, but not intentional discharges from the cooling tower (e.g., "piped" cooling tower blowdown or drains);
13. Hydrostatic testing of new pipes, tanks or vessels using potable water, surface water, or uncontaminated groundwater;
14. Discharges of water associated with drilling, rehabilitation and maintenance of potable or non-potable water wells and piezometers, or water supply or water quality evaluations including:
 - a. Discharges from any borehole not fully developed;
 - b. Well purging;
 - c. Well/aquifer pump tests not associated with groundwater remediation activities;

- d. Backflushing of injection wells; and
- 15. Non-stormwater discharges subject to an effluent limitation guideline listed in Table 2.2 (Applicable only to discharges to WOTUS).

1.1.4 Limitations on Coverage

1.1.4.1 Stormwater Discharges Mixed with Non-Stormwater

Stormwater discharges that are mixed with non-stormwater (other than the allowable non-stormwater discharges listed in Part 1.1.3) are not eligible for coverage under this permit.

1.1.4.2 Stormwater Discharges Associated with Construction Activity

Stormwater discharges associated with construction activity disturbing one acre or more, or that are part of a larger common plan of development or sale if the larger common plan will ultimately disturb one acre or more, are not eligible for coverage under this permit (unless in conjunction with mining activities specified in the Arizona Mining MSGP Sectors G and J). Stormwater discharges associated with construction activity that require coverage shall obtain authorization under Arizona’s Stormwater Construction General Permit.

1.1.4.3 Discharges Currently or Previously Covered by Another Permit

Unless the permittee receives written notification from ADEQ specifically allowing these discharges to be covered under this permit, the following are not eligible for coverage under this general permit:

- 1. Stormwater or non-stormwater discharges associated with industrial activity that are currently covered under an individual AZPDES permit or an alternative AZPDES general permit and has established numeric water quality-based limitations developed for the stormwater component of the discharge; or
- 2. Discharges for which any AZPDES permit has been or is in the process of being denied, terminated, or revoked by ADEQ (this does not apply to the routine reissuance of permits every five years).

1.1.4.4 Stormwater Discharges Subject to Effluent Limitations Guidelines
(Applicable only to discharges to WOTUS)

For stormwater discharges subject to effluent limitation guidelines (ELG) under 40 CFR, Subchapter N only those discharges identified in Table 2.2 are eligible for coverage under this permit. ELG does not apply for discharges to non-WOTUS protected surface waters. See A.R.S 49-255.04(B)(2).

1.1.4.5 New Dischargers and New Sources Based on Surface Water Quality Standards
(Applicable only to discharges to WOTUS)

A new discharger or a new source (as defined in Appendix A) is ineligible for coverage under this permit if ADEQ determines that the discharge will cause or contribute to an exceedance of a surface water quality standard. In such case, ADEQ may notify the applicant that an individual permit is necessary per Part 1.4, or alternatively ADEQ may authorize coverage under this permit when the applicant implements additional control measures, so that discharges from the site will meet the surface water quality standards. This section does not apply to discharges to non-WOTUS protected surface waters. See A.R.S 49-255.04(B)(1).

1.1.4.6 New Dischargers and New Sources to Impaired Waters (Applicable only to discharges to WOTUS)

A new discharger or a new source to an impaired water (as defined in Appendix A) is not automatically eligible for coverage under this permit. This section does not apply to discharges to non-WOTUS protected surface waters.

1. To receive authorization under this permit, the applicant shall make one of the following demonstrations and retain such documentation with the stormwater pollution prevention plan (SWPPP):
 - a. That the site will employ measures to prevent all exposure to stormwater of the pollutant(s) for which the protected surface water is impaired; or
 - b. That the discharge from the site has no potential to contain the pollutants causing impairment; or
 - c. That the discharge is not expected to cause or contribute to an exceedance of an applicable surface water quality standard. The applicant shall demonstrate with data or other technical documentation that either:
 - i. For discharges to waters without an approved or established TMDL, that the discharge of the pollutant for which the protected surface water is impaired will meet the applicable surface water quality standards, at the point of discharge to the protected surface water; or
 - ii. For discharges to waters with an approved or established TMDL, that the discharges are consistent with the provision in the TMDL, including established TMDL and implementation plans.

Pursuant to A.A.C. R18-11-109(D)(2), if a protected surface water is impaired for suspended solids, an operator seeking authorization to discharge under this permit may satisfy the requirement of Part 1.1.4.6(1)(c)(i) either by discharging only within the first 48 hours after a local storm event, or by demonstrating that any discharge after that time satisfies the requirements of Part 1.1.4.6(1)(c)(i) or (ii).

2. The applicant shall submit:
 - a. The Notice of Intent (NOI) in accordance with Part 1.3.1;
 - b. An electronic copy of the SWPPP for ADEQ review. The SWPPP shall describe how the permittee will:
 - i. Monitor for pollutants of concern in the discharge in accordance with Part 6.2.3; and
 - ii. Provide the necessary information or documentation related to the demonstration selected in Part 1.1.4.6(1).
3. If the proposed discharge is to a tributary within 2.5 miles upstream of a water or portion thereof classified as impaired and /or not-attaining, the applicant shall submit a copy of the SWPPP electronically with the NOI. Note: a SWPPP does not have to be submitted if the discharge is to a non-WOTUS impaired or not-attaining water.
4. Within 30 calendar days of receipt of information required in Part 1.1.4.6 (2), ADEQ will notify the applicant in writing that:
 - a. It is acceptable to proceed under the general permit and the permit authorization has been issued; or
 - b. The SWPPP is incomplete or otherwise deficient and must be revised. The applicant shall submit the revised electronic SWPPP to ADEQ for review that addresses the deficiencies as identified in the ADEQ notification; or
 - c. It is not eligible for coverage under this permit and must apply for an individual permit under Part 1.4.

1.1.4.7 New or Expanded Discharges to Outstanding Arizona Waters

(Applicable only to discharges to WOTUS)

This section does not apply to discharges to non-WOTUS protected surface waters. See A.R.S 49-221(A)(1).

1. No new or expanded discharges or a new source directly to a water or portion thereof classified as an Outstanding Arizona Water (OAW) (see A.A.C. R18-11-112) are authorized under this permit.
2. New or expanded discharges to tributaries upstream of a water or portion thereof classified as an OAW are not automatically eligible for coverage under this permit. To receive authorization for a new or expanded discharge to a tributary upstream of a water or portion thereof classified as an OAW, the applicant shall submit:
 - a. The NOI in accordance with Part 1.3.1;
 - b. An electronic copy of the SWPPP for ADEQ review that demonstrates the discharge will not degrade existing water quality in the downstream OAW and retain documentation supporting this demonstration onsite with the SWPPP. Information relevant to this demonstration may include, but is not limited to, some or all of the following:
 - i. The distance between the discharge and the water or portion thereof that is the OAW;
 - ii. The estimated size (volume) and duration of the discharge;
 - iii. The expected frequency of the discharge;
 - iv. The expected chemical characteristics of the discharge;
 - v. The known or expected quality of the water or portion thereof that is the OAW during storm events.
3. If the proposed discharge is to a tributary within 2.5 miles of a water upstream or portion thereof classified as an OAW, the applicant shall submit an electronic copy of the SWPPP that includes a sampling and analysis plan to collect data appropriate to verify the demonstration in subsection b, above.
4. Within 30 calendar days of receipt of information required in Part 1.1.4.7 (2), ADEQ will notify the applicant in writing that:
 - a. It is acceptable to proceed under the general permit and the permit authorization has been issued; or
 - b. The SWPPP is incomplete or otherwise deficient and must be revised. The applicant shall submit the revised SWPPP to ADEQ for review that addresses the deficiencies as identified in the notification; or
 - c. It is not eligible for coverage under this permit and must apply for an individual permit under Part 1.4.

1.2 Permit Compliance

Any noncompliance with any of the requirements of this permit constitutes a violation of A.R.S. Title 49, Chapter 2, Article 3.1. Non-compliance with requirements of this permit that apply to discharges to WOTUS constitute a violation of the CWA.

Requirements of this permit that regulate discharges to non-WOTUS protected surface waters were not adopted pursuant to the CWA and do not constitute effluent standards or limitations under 33 U.S.C. § 1365. Non-compliance with requirements of this permit that apply to discharges to non-WOTUS protected surface waters is enforceable solely by ADEQ pursuant to A.R.S. Title 49, Chapter 2, Article 4.

1.3 Authorization Under this Permit

1.3.1 Obtaining Authorization to Discharge

1. Before obtaining authorization under this permit, the applicant shall:
 - a. Meet the eligibility requirements in Part 1.1;
 - b. Select and design control measures in accordance with Part 2.2 (such control measure shall be installed and implemented prior to discharge);
 - c. Develop or update a SWPPP according to the requirements in Part 5 of this permit. An applicant seeking authorization, for a new discharge to an impaired water that is a WOTUS or to a tributary within 2.5 miles upstream of an impaired water (see Part 1.1.4.6) that is a WOTUS or for a new or expanded discharge to a tributary within 2.5 miles upstream of an Outstanding Arizona Water that is a WOTUS (see Part 1.1.4.7) is required to submit a copy of the SWPPP electronically to the Department for review. The corresponding review fee (A.A.C. Title 18, Chapter 14, Article 1) must also be submitted electronically using myDEQ at the time the SWPPP is submitted. Note: a SWPPP does not have to be submitted for a new discharger or new source if the discharge is to a non-WOTUS impaired or not-attaining water; and
 - d. Submit to the Department a complete and accurate Notice of Intent (NOI).
 - e. If the site will discharge to a regulated municipal separate storm sewer system (MS4), the applicant must provide:
 - The name of the MS4 operator; and
 - The protected surface water that receives the discharge.

2. If ADEQ notifies the applicant that a new or modified NOI is inaccurate, a new NOI will have to be submitted along with the initial application fee(s).

3. Submitting the Notice of Intent (NOI):

The NOI must be submitted electronically using ADEQ's on-line permitting portal myDEQ, by the deadline applicable to your site, listed in Table 1-2.

4. Authorization to Discharge Timeframes

a. Routine Authorizations

Unless otherwise notified, the applicant is authorized to discharge stormwater from an eligible site when the Notice of Intent is submitted through the on-line permitting system, myDEQ, and the NOI Certificate is issued to the applicant. The NOI Certificate is issued immediately after the submission of a complete and accurate NOI and the receipt of the applicant's payment. The NOI Certificate will include a unique authorization number (LTF number) and the effective date of permit coverage issued to the applicant.

b. Authorizations to Discharge for New Dischargers to Impaired Waters and New or Expanded Discharges to Tributaries of OAWs. (Applicable only to discharges to WOTUS). Unless otherwise notified, an applicant subject to Part 1.1.4.6 or 1.1.4.7 is authorized to discharge stormwater from an eligible site upon receipt of the Notice of Intent Certificate or 30 calendar days after a complete and accurate SWPPP is received by the Department, whichever is earlier. When the SWPPP is approved by ADEQ, the applicant will receive the Notice of Intent Certificate.

c. NOIs Requiring Additional Evaluation (Applicable only to discharges to WOTUS). Authorization to discharge will not occur for up to 30 calendar days in the event that a SWPPP review is required. The permittee is authorized to discharge stormwater from an eligible site upon receipt of the Notice of Intent Certificate or 30 calendar days after a complete and accurate SWPPP is received by the

Department, whichever is earlier. When requesting a voluntary SWPPP review, coverage is granted when ADEQ deems the SWPPP complete and accurate. When the SWPPP is approved by ADEQ, the applicant will receive the Notice of Intent Certificate.

- d. Requirement to Obtain Alternate Coverage.
ADEQ may require the operator to submit an application for an individual AZPDES permit, as detailed in Part 1.4. In these instances, ADEQ will notify the operator in writing of the request for submission of an individual AZPDES permit application.

5. The time frames for discharge authorization are presented in Table 1-2, below.

Table 1-2. NOI Submittal Deadlines		
Category	NOI Submission Deadline	Discharge Authorization Status ^{1,2}
Existing Dischargers – authorized for coverage under the 2019 MSGP.	<p>Submit NOI between January 16, 2025 and April 16, 2025, unless ADEQ notifies the applicant that the deadline was extended.</p> <p>The SWPPP must be updated to ensure that this permit’s requirements are addressed prior to submitting your NOI.</p>	<p>The discharge authorization (Notice of Intent Certificate) is issued immediately after the submission of a complete and accurate NOI, and the receipt of the applicant’s NOI fee in myDEQ (Part 1.3.1(3)(a)), unless ADEQ notifies you that your authorization has been delayed or denied.</p> <p>If the NOI is not submitted by the deadline, the existing coverage under the 2019 MSGP will be automatically terminated by ADEQ.</p>
Other Eligible Dischargers – in operation prior to the effective date of this permit, but did not obtain coverage under the 2019 MSGP or another AZPDES permit and are not operating consistent with the No Exposure Certificate Conditional Exclusion.	<p>Submit NOI as soon as possible, but no later than 60 calendar days from the permit’s effective date, unless the deadline was extended.</p> <p>The SWPPP must be prepared to ensure that this permit’s requirements are addressed prior to submitting your NOI.</p>	<p>The discharge authorization (Notice of Intent Certificate) is issued immediately after the submission of a complete and accurate NOI, and the receipt of the applicant’s NOI fee in myDEQ (Part 1.3.1(3)(a)), unless ADEQ notifies you that your authorization has been delayed or denied.</p>

Table 1-2. NOI Submittal Deadlines		
Category	NOI Submission Deadline	Discharge Authorization Status ^{1,2}
<p><u>New Dischargers</u> – will commence discharging after the effective date of this permit.</p>	<p>Submit NOI as soon as possible, and at least 30 calendar days before discharge is anticipated.</p> <p>The SWPPP must be prepared to ensure that this permit’s requirements are addressed prior to submitting your NOI.</p>	<p>The discharge authorization (Notice of Intent Certificate) is issued immediately after the submission of a complete and accurate NOI, and the receipt of the applicant’s NOI fee in myDEQ (Part 1.3.1(3)(a)), unless ADEQ notifies you that your authorization has been delayed or denied.</p>
<p><u>Change of ownership</u> and/or operation to a new owner or operator, whose discharge is authorized under this permit.</p>	<p>Permitted owner or operator shall submit a NOT to ADEQ within 30 calendar days after the new owner or operator assumes responsibility for the site.</p> <p>New owner /operator shall submit a NOI to ADEQ 30 calendar days before taking over operational control or initiating activities at the site.</p> <p>The new owner/ operator shall develop the SWPPP to ensure that this permit’s requirements are addressed prior to submitting the NOI.</p>	<p>The discharge authorization (Notice of Intent Certificate) is issued immediately after the submission of a complete and accurate NOI, and the receipt of the applicant’s NOI fee for the new owner/ operator in myDEQ (Part 1.3.1(3)(a)), unless ADEQ notifies you that your authorization has been delayed or denied.</p>
<p><u>Change in site location</u> to a new site location, whose discharge is authorized by this permit, including a change in geographic coordinates.</p>	<p>Owner /operator of the new site location, shall submit a NOI to ADEQ 30 calendar days before changing site locations.</p> <p>Owner/ operator shall develop the SWPPP to ensure that this permit’s requirements are addressed prior to submitting the NOI.</p> <p>Permitted owner or operator shall submit a Notice of Termination (NOT) to ADEQ within 30 calendar days after the site location changes.</p>	<p>The discharge authorization (Notice of Intent Certificate) is issued immediately after the submission of a complete and accurate NOI, and the receipt of the applicant’s NOI fee for the new site location in myDEQ (Part 1.3.1(3)(a)), unless ADEQ notifies you that your authorization has been delayed or denied.</p>

Table 1-2. NOI Submittal Deadlines		
Category	NOI Submission Deadline	Discharge Authorization Status ^{1,2}
Change in site name to a different site name whose discharge is authorized by this permit.	<p>Owner/operator of the site location with a new name, shall submit a NOI to ADEQ 30 calendar days before changing site name.</p> <p>Owner/operator shall develop the SWPPP to ensure that this permit's requirements are addressed prior to submitting the NOI.</p> <p>Permitted owner or operator shall submit a NOT to ADEQ within 30 calendar days after the site name changes.</p>	The discharge authorization (Notice of Intent Certificate) is issued immediately after the submission of a complete and accurate NOI, and the receipt of the applicant's NOI fee for the new site name in myDEQ (Part 1.3.1(3)(a)), unless ADEQ notifies you that your authorization has been delayed or denied.
Changes to the NOI³ (revised or modified NOI)	<p>Submit a revised NOI to ADEQ within 30 calendar days of the change to NOI information.³</p> <p>The permittee shall update the SWPPP to ensure that this permit's requirements are addressed prior to submitting the revised NOI.</p>	The discharge authorization (Notice of Intent Certificate) is issued immediately after the submission of a complete and accurate NOI, and the receipt of the applicant's NOI fee, if required, in myDEQ (Part 1.3.1(3)(a)), unless ADEQ notifies you that your authorization has been delayed or denied.

¹ If the NOI submission deadline is missed, any and all continued discharges from the industrial activities will be unauthorized under the CWA until they are covered by this or a different AZPDES permit. ADEQ may take enforcement action for any unpermitted discharges.

² Discharges are not authorized if the NOI is inaccurate (incorrect facility name, facility address, or facility latitude/longitude. The facility latitude/longitude shall represent the central location of the facility.) or if you are ineligible for permit coverage. If an existing NOI is deemed inaccurate, submittal of a new NOI and a new fee is required.

³ The permittee is required to submit a revised (modified) NOI for the following changes to their previous application: site contact, change in discharge location to MS4, sector, subsector, co-located facilities, acreage exposed to industrial stormwater, primary industrial activity acreage exposed to stormwater, co-located industrial activities acreage exposed to stormwater, SWPPP contact, outfall name, outfall location, number of outfalls, outfalls that are inactivated, protected surface water, protected surface water type, sampling type, and claiming inactive and unstaffed site status (or reverting back to active and staffed). There is no fee for modifying or revising a NOI, unless an outfall to a special water is added, which would trigger the SWPPP review fee.

1.3.2 Continuation of Coverage for Existing Permittees after this Permit Expires

If this permit is not reissued or replaced prior to the expiration date, it will be administratively continued in accordance with A.A.C. R18-9-C903(A) and remain in force and effect. Discharges authorized under this permit will automatically remain covered by this permit until the earliest of:

- The operator submits a timely, complete, and accurate NOI requesting authorization to discharge under a renewal or revision of this permit and ADEQ issues an Authorization to Discharge; or
- The operator submits a Notice of Termination (NOT); or
- ADEQ denies coverage under this general permit or denies or issues coverage under

- an individual permit or other alternative permit for the site's discharges; or
- A formal permit decision is made by ADEQ not to reissue this general permit, at which time ADEQ will identify a reasonable time period for covered dischargers to seek coverage under an alternative general permit or an individual permit. Coverage under this permit will cease at the end of this time period.

1.4 Coverage under Alternative Permits

1.4.1 ADEQ Requiring Coverage under an Alternative AZPDES Permit

For discharges to a WOTUS: ADEQ may require an operator to obtain authorization to discharge under either an individual AZPDES permit or an alternative AZPDES general permit in accordance with A.A.C. R18-9-C902(A).

For discharges to a non-WOTUS: Discharges to non-WOTUS protected surface waters, ADEQ may require an operator to obtain authorization under an Individual AZPDES Permit if the requirements in A.R.S. § 49-255.04(C) are met.

If ADEQ requires the site to apply for an alternative permit, the Agency will notify the operator in writing that a permit application or NOI is required. This notification will include a brief statement of the reasons for this decision. If ADEQ requires an operator to apply for an individual permit, any applications shall be submitted within 120 calendar days, unless ADEQ provides an extended deadline. In addition, a discharger already authorized under this permit, will be notified of a deadline to file a permit application. Coverage under this permit will terminate immediately if the operator fails to submit an individual AZPDES permit application by the specified deadline. ADEQ may take appropriate enforcement action for any unpermitted discharge.

1.4.2 Permittee Requesting Coverage under an Alternative Permit

An applicant may elect to forego coverage under this general permit by applying for an individual permit. In such a case, the applicant must submit an individual permit application in accordance with the requirements of A.A.C. R18-9-B901(B)(2) to the Department and include reasons supporting the request. If the application is for discharges to non-WOTUS protected surface waters, the applicant does not need to submit the information required by 40 C.F.R. §§ 122.26(c)(1)(i)(E)(1) & 122.26(c)(1)(i)(G).

The request may be granted by issuance of an individual permit or authorization of coverage under an alternative general permit if the Department finds that the reasons are adequate to support the request.

When an individual AZPDES permit is issued to the applicant or the applicant is authorized to discharge under an alternative AZPDES general permit, the authorization to discharge under the MSGP is terminated on the effective date of the alternate permit.

1.5 Terminating Permit Coverage

1.5.1 Submitting a Notice of Termination (NOT)

To terminate permit coverage, the permittee shall submit a complete and accurate Notice of Termination (NOT). The site's authorization to discharge under this permit terminates immediately once a NOT Summary is received from the Department. Any reporting requirements shall be submitted at the time of termination.

1.5.2 How to Submit the NOT

The permittee must submit the NOT electronically using a valid myDEQ account.

1.5.3 When to Submit a NOT

The permittee shall submit a NOT within 30 calendar days after:

- A new owner or operator assumes ownership or has taken over responsibility for the site.
- The owner or operator changes the geographic location of the site.
- The owner or operator of a site changes the name of the facility.

The permittee may submit a NOT after one or more the following conditions have occurred:

- The permittee has ceased operations at the site, there are not or will no longer be discharges of stormwater associated with industrial activity from the site, and the site has implemented necessary sediment and erosion control measures; or
- The site meets the requirements for a No Exposure Certification and has obtained NEC coverage; or
- The permittee obtained coverage under an individual or alternative general permit for all discharges required to be covered by an AZPDES permit: or
- There are no longer discharges of stormwater to a protected surface water, either directly or by way of conveyance (storm sewer, street, ditch, etc).

The permittee is responsible for meeting the terms and conditions of this permit (including annual fee(s)) until the site's authorization to discharge is terminated.

1.6 Conditional Exclusion for a No Exposure Certification (NEC)

Facilities that otherwise would be regulated under this general permit are exempt from the requirement to obtain a permit coverage if there is no exposure of industrial materials or activities from precipitation or runoff. The demonstration of "no exposure" can only be made on a site-wide basis, and is not for individual outfalls.

1.6.1 Qualifications for a No Exposure Certification

To qualify for a No Exposure Certification, the operator must provide certification that the site:

- a) Has a storm resistant shelter to protect industrial materials and activities from exposure to rain, snow, snow melt, and runoff; and
- b) Demonstrate and certify that the following materials or activities are or will not be in the foreseeable future, exposed to precipitation:
 - Areas that are using, storing or cleaning industrial machinery or equipment, and areas where residuals from using, storing or cleaning industrial machinery or equipment remain and are exposed to stormwater;
 - Materials or residuals on the ground or in stormwater inlets from spills/leaks;
 - Materials or products from past industrial activity;
 - Material handling equipment (except adequately maintained vehicles);
 - Materials or products during loading/unloading or transporting activities;
 - Materials or products stored outdoors (except final products intended for outside use, e.g., new cars, where exposure to stormwater does not result in the discharge of pollutants);

- Materials contained in open, deteriorated or leaking storage drums, barrels, tanks, and similar containers;
- Materials or products handled/stored on roads or railways owned or maintained by the discharger;
- Waste material (except waste in covered, non-leaking containers, e.g., dumpsters);
- Application or disposal of process wastewater (unless otherwise permitted); and
- Particulate matter or visible deposits of residuals from roof stacks/vents not otherwise regulated (e.g., under an air quality control permit) and evident in the stormwater outflow.

1.6.2 No Exposure Certification Additional Considerations

A storm resistant shelter is not required for the following industrial materials and activities under the No Exposure Certification:

- Drums, barrels, tanks, and similar containers that are tightly sealed, provided those containers are not deteriorated and do not leak (“Sealed” means banded or otherwise secured and without operational taps or valves);
- Adequately maintained vehicles used in material handling; and
- Final products that are designed for outdoor use, provided the final products have not deteriorated or are a source of pollutants (mobilized in stormwater or wind).

1.6.3 How to Submit the NEC

The operator of a site must apply for the NEC electronically using a valid myDEQ account by following the Notice of Intent process. If eligible, the applicant will be given the option to pursue permit coverage by submitting a NOI, or a NEC.

1.6.4 When to Submit an NEC

If the permittee for the site is covered by this permit and becomes eligible for a “no exposure” exclusion from permitting under 40 CFR 122.26(g), the operator may file a No Exposure Certification (NEC) at any time. The site is no longer required to have permit coverage upon a complete and accurate No Exposure Certification to ADEQ. Once the No Exposure Certificate is received, the permittee shall complete a Notice of Termination (NOT) for the original permit coverage. If at any time the site can no longer satisfy the conditions of no exposure, renewed permit coverage is required and the operator shall submit a new NOI.

The operator of a site covered by an NEC shall allow ADEQ and/or the representatives of a regulated MS4 (where there is a stormwater discharge to the MS4) to inspect the site.

ADEQ retains the authority to deny this exclusion (and require authorization under an individual permit) if it determines that the discharge causes, has a reasonable potential to cause, or contributes to an exceedance of an applicable surface water quality standard in the protected surface water.

1.6.5 NEC Timeframes

The NEC is nontransferable and shall be renewed with ADEQ every five years from the date the NEC is issued.

2.0 Effluent Limits and Control Measures

2.1 Water Quality-Based Standards

2.1.1 Water Quality Standards

The permittee shall control discharge from the site as necessary to not cause or contribute to an exceedance of an applicable surface water quality standard in the protected surface water. If at any time the permittee becomes aware, or ADEQ determines, that the site's discharge causes or contributes to an exceedance of an applicable surface water quality standard in the protected surface water, the permittee shall take corrective action as required in Part 3.1, document and report the corrective actions as required in Part 3.2.

ADEQ may impose additional water quality-based requirements on a site-specific basis, or require the operator to obtain coverage under an individual permit in accordance with Part 1.4., if information in the Notice of Intent (NOI), required reports, or from other sources indicates the discharges are not controlled as necessary to not cause or contribute to an exceedance of an applicable surface water quality standard in the protected surface water.

2.1.1.1 Discharges to Water Quality Not-Attaining and Impaired Waters

- a. **Existing Discharges to an Impaired Water with an Approved TMDL (Not-Attaining Water).** If the discharge is to an impaired water with an approved TMDL, or is otherwise referenced in an approved TMDL, the Department may require, as a condition of authorization, additional limits, controls, or analytical monitoring necessary to be consistent with the assumptions and requirements of the applicable TMDL and any available wasteload allocation (WLA). Alternatively, ADEQ will advise the permittee if coverage under an individual permit is necessary in accordance with Part 1.4.
- b. **Existing Discharges to an Impaired Water without an Approved TMDL (Impaired Water).** If the discharge is to an impaired water without an approved TMDL, the permittee shall comply with Part 2.1.1., and the monitoring requirements of Part 6.2.3. This subsection applies to discharges to impaired waters as well as to situations where ADEQ determines that the site's discharge is not controlled as necessary to meet surface water quality standards in an impaired downstream water segment, even if the discharge is to a protected surface water that is not specifically identified on a Section 303(d) list.
- c. **New Dischargers or New Sources to an Impaired Water and or Not-Attaining Water.** (Applicable only to discharges to WOTUS) If the permittee's authorization to discharge under this permit relied on Part 1.1.4.6 for a new discharger or a new source to an impaired and or not-attaining water that is a WOTUS, the permittee shall implement and maintain any control measures or conditions on the site that enabled it to become eligible under Part 1.1.4.6. The permittee shall modify such measures or conditions as necessary in accordance with any Part 3 corrective actions. In addition, the permittee shall comply with Part 2.1.1 and the analytical monitoring requirements of Part 6.2.3.

2.2 Control Measures and Effluent Limits

The requirement to implement control measures in accordance with Part 2.2.1 applies to all sites that discharge to a WOTUS. Part 8 contains additional control measures imposed on a sector-specific basis for discharges to a WOTUS. Consistent with Part 2.2.1 for discharges to non-WOTUS protected surface waters, a permittee may elect to implement control measures in Part 2.2.1.2.1-2.2.1.2.10, and sector-specific control measures in Part 8 as applicable, or as an alternative, conduct analytical monitoring in accordance with Part 6 and Part 8 (sector-specific monitoring).

2.2.1 Control Measures

The permittee shall select, design, install, and implement control measures in order to meet the requirements in Part 2.1 and Part 2.2.1.

The selection, design, installation, and implementation of these control measures must be in accordance with good engineering practices and manufacturer's specifications. The permittee may deviate from such manufacturer's specifications, however the justification for the deviation shall be maintained and documented in the site SWPPP.

If the site's control measures are not effective, the permittee shall modify and/or add additional control measures to meet the requirements of this permit. Regulated stormwater discharges from the site include stormwater run-on that commingles with stormwater discharges associated with industrial activity.

At a minimum, the permittee shall consider all of the control measures listed below for implementation at the site and select those that the permittee determines are appropriate given the nature of the site and site conditions to meet the requirements set forth in Part 2.1 and Part 2.2.1.1. The control measures listed below are not intended to be an exclusive list of necessary control measures. In preparing the SWPPP in accordance with the requirements in Part 5 of this permit, the permittee shall explain the basis for the selection of the control measures to be utilized at the site.

2.2.1.1 Control Measure Selection and Design Considerations

The permittee shall assess the type and quantity of pollutants likely to discharge in stormwater or allowable non-stormwater from the site when designing and implementing control measures. The permittee shall consider the following when selecting and designing control measures:

- Preventing stormwater from coming into contact with pollutants is generally more effective, and less costly, than trying to remove pollutants from stormwater;
- Using control measures in combination is more effective than using control measures in isolation for minimizing pollutants in the site's stormwater discharge;
- Assessing the type and quantity of pollutants, including their potential to impact the protected surface water(s) quality, is necessary in order to design effective control measures that achieve permit limits;
- Minimizing impervious areas at the site and infiltrating runoff onsite (including bioretention cells, green roofs, and pervious pavement, among other approaches) can reduce runoff and improve groundwater recharge and stream base flows in local streams, although care must be taken to avoid groundwater contamination;
- Attenuating flow using open vegetated swales and natural depressions can reduce in-stream impacts of erosive flows;
- Using containment to intercept stormwater flows before they leave the site, such as directing flows to non-discharging areas (pits) or installing runoff containment;

- Conserving and/or restoring of riparian buffers help protect streams from stormwater runoff and improve water quality; and
- Using treatment interceptors (e.g., swirl separators and sand filters) may be appropriate in some instances to minimize the discharge of pollutants.
- Implementing structural improvements, enhanced/resilient pollution prevention measures, and other mitigation measures can help to minimize impacts from stormwater discharges from major storm events such as extreme/heavy precipitation and flood events. If the facility may be exposed to or has previously experienced such major storm events, control measures that may be considered include, but are not limited to:
 - Reinforce materials storage structures to withstand flooding and additional exertion of force;
 - Prevent floating of semi-stationary structures by elevating to the Base Flood Elevation (BFE) level or securing with non-corrosive device;
 - When a delivery of exposed materials is expected, and a storm is anticipated within 48 hours, delay delivery until after the storm or store materials as appropriate (refer to emergency procedures);
 - Temporarily store materials and waste above the BFE level;
 - Temporarily reduce or eliminate outdoor storage;
 - Temporarily relocate any mobile vehicles and equipment to higher ground; and
 - Conduct staff training for implementing emergency procedures at regular intervals, at minimum once per year.

2.2.1.2 Technology-Based Effluent Limits, Best Management Practices, and State-Specific Requirements

- A. A permittee discharging to a WOTUS shall comply with the following non-numeric effluent limits (except where otherwise specified in Part 8) as well as any sector-specific non-numeric effluent limits in Part 8.
- B. A permittee discharging to non-WOTUS protected surface waters shall either; (1) choose to implement either non-numeric best management practices (BMP) in Section 2.2.1.2.1-2.2.1.2.10 and Part 8 sector specific requirements, to presumptively meet SWQS or (2) conduct routine analytical monitoring per Section 6.0 and Part 8 (sector specific) to demonstrate that discharges do not exceed SWQS. Numeric effluent limitation guidelines do not apply to discharges to non-WOTUS protected surface waters. Permittees discharging to non-WOTUS protected surface waters are subject to state requirements only per A.R.S. §49-255.04(C), enforceable solely by ADEQ.

2.2.1.2.1 Minimize Exposure

The permittee shall minimize the exposure of manufacturing, processing, and material storage areas (including loading and unloading, storage, disposal, cleaning, maintenance, and fueling operations) to rain, snow, snowmelt, and runoff in order to minimize pollutant discharges by implementing measures, such as the following:

- Locating industrial material and activities inside or protecting with storm resistant shelter (although significant enlargement of impervious surface area is not recommended);
- Use grading, berming, or curbing to prevent runoff of contaminated flows and divert run-on away from these areas;
- Locating materials, equipment, and activities so that potential leaks or spills

- are contained or able to be contained or diverted before discharging off-site;
- Using spill/overflow protection;
- Clean up spills and leaks promptly using dry methods (e.g. absorbents);
- Covering fueling area(s) or minimize stormwater run-on/runoff to fueling area(s);
- Store leaky vehicles and equipment indoors, or if stored outdoors, use drip pans and absorbents;
- Draining fluids from equipment and vehicles that will be decommissioned, and for any equipment and vehicles that will remain unused for extended periods of time;
- Performing all vehicle and /or equipment cleaning operations indoors, under cover, or in bermed areas that prevent runoff and run-on and also that capture any overspray; and
- Ensuring that all washwater not meeting the requirements in Part 1.1.3.1. (7) and (8), drains to a proper collection system (i.e., not the stormwater drainage system).

2.2.1.2.2 Good Housekeeping

The permittee shall implement good housekeeping measures for all exposed areas that are potential sources of pollutants. Such measures may include, but are not limited to the following:

- Sweep or vacuum at regular intervals;
- Keeping materials orderly and labeled;
- Storing materials in appropriate containers;
- Cleaning up spills and leaks promptly using dry methods (e.g., absorbents) to prevent the discharge of pollutants;
- Using drip pans and absorbents under or around leaky vehicles and equipment or store indoors where feasible;
- Keep dumpster lids closed when not in use, where feasible. For dumpsters and roll off boxes that do not have lids and could leak, ensure that discharges have a control (e.g., secondary containment, treatment) when needed.
- Minimize the potential for waste, garbage and floatable debris to be discharged by keeping exposed areas free of such materials, or by intercepting them before they are discharged.

2.2.1.2.3 Maintenance

The permittee shall maintain all control measures that are used to achieve effluent limits in this permit in effective operating conditions, as well as all industrial equipment and systems, in order to minimize pollutants in stormwater discharge. This includes measures such as the following:

- Performing inspections and preventive maintenance of stormwater drainage, source controls, treatment systems, plant equipment and systems that could fail and result in contamination of stormwater.
- Maintaining non-structural control measures (e.g., keep spill response supplies available, personnel appropriately trained).
- Inspecting baghouses and removing any accumulated dust at the exterior base of the baghouse.
- Cleaning catch basins.

If control measures are in need of repair or replacement, the permittee shall make any necessary maintenance changes as soon as practicable. All

reasonable steps shall be taken to minimize the discharge of pollutants until the final repair is completed. This shall include cleaning up any contaminated surfaces so that the material will not be discharged in subsequent storm events. Final repairs or replacement of stormwater controls should be completed as soon as feasible but no later than 14 calendar days following discovery, or before the next measurable storm event, whichever is sooner.

If necessary changes cannot be implemented within the specified timeframe(s), the permittee shall document within the SWPPP the reasons for the delay, a schedule for completing the necessary changes, date completed, and any back-up control measures in place to ensure compliance with permit requirements, should a runoff event occur while a control measure is off-line (either in part or in whole).

2.2.1.2.4 Spill Prevention and Response Procedures

The permittee shall minimize the potential for leaks, spills, and other releases that may be exposed to stormwater and develop plans for timely and effective clean-up of spills if, or when they occur in order to minimize pollutant discharges. The permittee shall implement spill prevention and response measures, such as:

- Plainly labeling containers (e.g., "Used Oil," "Spent Solvents," "Fertilizers and Pesticides," etc.) that could be susceptible to spillage or leakage to encourage proper handling and facilitate rapid response if spills or leaks occur;
- Implement procedures for material storage and handling, including the use of secondary containment and barriers between material storage and traffic areas;
- Develop procedures for expeditiously stopping, containing, and cleaning up leaks, spills, and other releases;
- Keep spill kits on-site and located near areas where spills may occur or a rapid response can be made; and
- Implement procedures for notification of appropriate site personnel and emergency response. As soon as the permittee has knowledge of a leak, spill, or other release occurs that contains a hazardous substance or oil in an amount equal to or in excess of a reportable quantity established under either 40 CFR Part 110, 40 CFR Part 117, or 40 CFR Part 302, the permittee shall notify ADEQ Emergency Response at (602) 771-2330 or, toll free, at (800) 234-5677. Contact information must be in locations that are readily accessible and available.

2.2.1.2.5 Erosion and Sediment Controls

The permittee shall minimize on-site erosion and sedimentation in order to minimize pollutant discharges, including but not limited to measures such as the following:

- Stabilize exposed soil;
- Control and contain runoff and sediment using structural and/or non-structural control measures;
- Place flow velocity dissipation devices at discharge locations and within outfall channels where necessary, to reduce erosion and/or settle out pollutants.

In selecting, designing, installing, and implementing appropriate control measures, permittees are encouraged to consult EPA's internet-based resources relating to Stormwater BMPs for erosion and sedimentation.

If the permittee uses polymers and/or other chemical treatments as part of the controls, the permittee must identify the polymers and/or chemicals used and the purpose in the SWPPP.

2.2.1.2.6 Management of Stormwater Runoff

The permittee shall minimize the discharge of pollutants from the site by implementing control measures, including but not limited to measures such as the following:

- Divert clean stormwater around industrial materials and activities;
- Infiltrate, reuse, contain and reduce impacted runoff, or
- Treat and/or recycle stormwater runoff collected.

In selecting, designing, installing, and implementing appropriate control measures, permittees are encouraged to consult EPA's internet-based resources relating to stormwater runoff management and green stormwater infrastructure.

2.2.1.2.7 Salt Storage Piles or Piles Containing Salt

The permittee shall reduce stormwater runoff to minimize the discharge of pollutants from salt storage piles or piles containing salt by implementing control measures including, but not limited to measures, such as the following:

- Enclose or cover storage piles of salt, or piles containing salt, used for deicing or other commercial or industrial purposes, including maintenance of paved surfaces.
- Implement appropriate measures (e.g., good housekeeping, diversions, containment) to minimize exposure resulting from adding to or removing materials from the salt storage pile.

Salt storage piles do not need to be enclosed or covered if stormwater runoff from the piles is not discharged off-site or if discharges from the piles are authorized under another AZPDES permit.

2.2.1.2.8 Employee Training

The permittee shall train all employees who work in areas where industrial materials or activities are exposed to stormwater, or who are responsible for implementing activities necessary to meet the conditions of this permit (e.g., inspectors, maintenance personnel), including all members of the site's Stormwater Pollution Prevention Team. Training must cover both the specific control measures and the monitoring, inspection, planning, reporting, and documentation requirements described in this permit. For larger sites with multiple co-permittees, employee training is required for those industrial areas and stormwater controls measures for which the co-permittee is responsible for maintaining. Training shall be conducted at least annually.

The permittee must ensure the following personnel understand the requirements of this permit and their specific responsibilities with respect to those requirements, for the following:

- Personnel who are responsible for the design, installation, maintenance, and/or repair of control measures (including pollution prevention measures);
- Personnel responsible for the storage and handling of chemicals and

- materials that could become contaminants in stormwater discharges;
- Personnel who are responsible for taking and documenting corrective actions as required in Part 3;
- Personnel who are responsible for conducting and documenting monitoring and inspections as required in Parts 4 and 6.

Personnel must be trained in the following areas, if related to the scope of their job duties (e.g., only personnel responsible for conducting inspections need to understand how to conduct inspections):

- An overview of what is in the SWPPP;
- Spill response procedures, good housekeeping, maintenance requirements, and material management practices;
- The location of all controls on the site required by this permit, and how they are to be maintained;
- The proper procedures to follow with respect to the permit’s pollution prevention requirements; and
- When and how to conduct inspections, record applicable findings, and take corrective actions as required by Part 3.

2.2.1.2.9 Non-Stormwater Discharges

The permittee shall evaluate the presence of non-stormwater discharges at the site. Any non-stormwater discharges from the site not specifically authorized in Part 1.1.3 or covered by another AZPDES permit, shall be eliminated.

The discharge of vehicle and equipment washwater, including tank cleaning operations, is not authorized by this permit. These wastewaters must be covered under a separate AZPDES permit, discharged to a sanitary sewer in accordance with applicable industrial pretreatment requirements, or disposed of otherwise in accordance with applicable law.

2.2.1.2.10 Dust Generation and Vehicle Tracking of Industrial Materials

The permittee shall minimize generation of dust and off-site tracking of raw, final, or waste materials in order to minimize pollutant discharges.

2.2.2. Numeric Effluent Limitations Based on Effluent Limitations Guidelines
(Applicable only to discharges to WOTUS)

Table 2.2 below identifies specific regulated activities with effluent limitations guidelines and the locations of effluent limitations guidelines in this permit. Discharges from such regulated activities to a WOTUS must meet the specified effluent limitations guidelines. Compliance with these effluent limits is to be determined based on discharges from these regulated activities, independent of commingling with any other discharges allowed under this permit. ELG does not apply to discharges to non-WOTUS protected surface waters.

Table 2.2 Applicable Effluent Limitations Guidelines			
Regulated Activity	40 CFR Part/Subpart	MSGP Sector	Effluent Limit
Discharges resulting from spray down or intentional wetting of logs at wet deck storage areas	Part 429, Subpart I	A	See Part 8.A.7
Runoff from phosphate fertilizer manufacturing facilities that comes into contact with any raw materials, finished product, by-products or waste products (SIC 2874)	Part 418, Subpart A	C	See Part 8.C.4

Runoff from asphalt emulsion facilities	Part 443, Subpart A	D	See Part 8.D.4
Runoff from material storage piles at cement manufacturing facilities	Part 411, Subpart C	E	See Part 8.E.5
Runoff from hazardous waste landfills	Part 445, Subpart A	K	See Part 8.K.6
Runoff from non-hazardous waste landfills	Part 445, Subpart B	L	See Part 8.L.10
Runoff from coal storage piles at steam electric generating facilities	Part 423	O	See Part 8.O.8
Runoff containing urea from airfield pavement deicing at existing and new primary airports with 1,000 or more annual non-propeller departures	Part 449	S	Part 8.S.8

3.0 Corrective Action

3.1 Corrective Action Triggers

3.1.1 Conditions Requiring Corrective Action

The following conditions require corrective action:

- An unauthorized discharge (e.g., non-stormwater discharge not authorized by this or another AZPDES permit to a protected surface water or to a regulated MS4.);
- The permittee becomes aware, or ADEQ determines, that a discharge authorized by this permit from the site causes or contributes to an exceedance of applicable surface water quality standard(s) in the protected surface water (Part 2.1.1);
- The permittee becomes aware, or ADEQ determines, that a discharge authorized by this permit from the site to water listed as not-attaining exceeds an adopted wasteload allocation (WLA) for the pollutant(s) causing the impairment (Part 2.1.1.1);
- The permittee becomes aware, or ADEQ determines, that a discharge authorized by this permit from the site to an Outstanding Arizona Water (OAW) is degrading the existing water quality in the OAW (Part 2.1.1.2). NOTE: this condition does not apply for discharges to non-WOTUS protected surface waters; or
- A discharge authorized by this permit from the site violates a numeric effluent limitation guideline in Table 2.2 and in Part 8 sector- specific requirements. NOTE: this condition does not apply for discharges to non-WOTUS protected surface waters.

The permittee shall review the selection, design, installation, and implementation of a site's control measures and revise as necessary to ensure compliance with this permit.

A routine analytical monitoring exceedance (i.e., above an action level) is not considered a permit violation and does not require a corrective action, if the permittee evaluates and revises the controls measures as necessary (Part 6.2.1) and submits the necessary reporting (Part 7.2).

3.1.2 Substantially Identical Outfalls

If an outfall that represents other substantially identical outfalls requires corrective action, all related substantially identical outfalls shall be assessed for corrective action.

3.2 Corrective Action Deadlines, Documentation and Reporting

Following a discovery of any condition in Part 3.1.1, the permittee shall submit a Corrective Action Report Form. The form should be submitted as soon as practicable and must be submitted within 30 calendar days following the discovery of any condition in Part 3.1.1. The permittee shall submit the form provided by the Department in electronic form to stormwatercompliance@azdeq.gov that includes the following information:

1. The permittee shall take immediate actions to mitigate any condition(s) identified in part 3.1.1;
2. Within 72 hours of discovery, the permittee shall document the discovery of that condition, including the following:
 - a. Identification of the condition triggering the need for corrective action review;
 - b. Description of the problem/incident including material type and amount;
 - c. Date/time the problem was identified;
 - d. The location of the incident;
 - e. The cause of the spill, leak, other release or sampling exceedance, if applicable;
 - f. The outfall name(s)/ locations affected; and

- g. The affected protected surface water and whether the protected surface water is a special water (as defined in Appendix A).
3. Within 14 calendar days of discovery (or before the next measurable storm event if possible, whichever is sooner) the permittee shall complete and document the following:
- a. A summary of corrective action taken or to be taken, including modifications to control measures, in order to minimize or prevent the reoccurrence of a discharge of a pollutant(s) or prevent further exceedance(s);
 - b. Identify and describe SWPPP modification(s) that are required as a result of this discovery and/or corrective actions;
 - c. Provide date corrective action initiated or will be initiated;
 - d. Provide date corrective action completed or expected to be completed;
 - e. Results of any analytical monitoring that prompted corrective action, including any subsequent sampling results, if available;
 - f. Describe any accelerated monitoring (see part 6.4) or other permit contingency actions that will be required;
 - g. If corrective actions cannot be implemented within the specified timeframe(s), the permittee shall document the reasons for the delay, provide an implementation schedule for completing the necessary changes, including any back-up practices in place to ensure compliance with applicable effluent limitations, should a runoff event occur while a control measure is off-line;
 - h. If no corrective action is needed, describe the basis for that determination;
 - i. Provide the date and the outcome of the last four (4) routine site inspections; and
 - j. A statement, signed and certified in accordance with Appendix B, Subsection 9.

Any corrective actions documentation taken pursuant to this section, shall be kept with the site's SWPPP.

4.0 Inspections

Additional sector-specific inspection requirements may be required pursuant to Part 8 of this permit. If a conflict exists between the two, the requirements of Part 8 shall prevail.

4.1 Routine Site Inspections

During normal site operating hours, the permittee must conduct routine inspections and examine areas of the site covered by this permit, including the following:

- Areas where industrial materials or activities are exposed to stormwater with the potential to discharge;
- Areas that are identified as potential pollutant sources in the SWPPP;
- All stormwater control measures used to comply with the effluent limits contained in this permit;
- Locations where spills and leaks from industrial equipment, drums, tanks and other containers that can occur or has occurred in the past three years;
- Areas where tracking or blowing of sediment, trash, raw, final or waste materials is or has occurred from areas of no exposure to exposed areas, including locations where vehicles enter or exit the site;
- Discharge points.

Routine inspections shall be conducted at least once each calendar quarter beginning with the first full calendar quarter after the site becomes covered under this permit (see Part 1.3.1(2) and Table 1-2). The permittee shall specify the inspection schedules in the SWPPP.

A qualified person or persons (see definition in Appendix A) shall conduct routine site inspections. A member of the Stormwater Pollution Prevention Team shall conduct or participate in the routine site inspection.

The permittee shall conduct at least one of the routine site inspections each calendar year while a stormwater event or discharge is occurring at one or more outfalls, when practicable, to determine that the control measures are functioning correctly. If there is no measurable storm event(s) or discharge during a calendar year, the permittee shall document the inability to perform a routine inspection when a discharge is occurring. In this case, the permittee must still complete four routine quarterly inspections per calendar year.

4.1.1 Routine Site Inspection Documentation

The permittee shall document the findings of each routine site inspection performed and maintain this documentation with the SWPPP. Inspection findings do not need to be submitted to ADEQ, unless specifically requested. At a minimum, the documentation for each routine site inspection must include:

- The inspection date and time;
- The name(s) and signature(s) of the inspector(s);
- Weather information;
- All observations relating to the implementation of control measures at the site, including:
 - A description of any discharges occurring at the time of the inspection;

- Any previously unidentified discharges from and/or pollutants at the site;
- Any evidence of, or the potential for, previously unidentified pollutants entering the drainage system;
- Observations regarding the physical condition of and around all outfalls, including any flow dissipation devices, and evidence of pollutants in discharges and/or to the protected surface water;
- Any control measures needing maintenance or repairs;
- Any failed control measures that need replacement;
- Any additional control measures needed to comply with the permit requirements;
- Any required revisions to the SWPPP resulting from the inspection;
- Any incidents of noncompliance; and
- Signature of person conducting the inspection.

Any corrective action required as a result of a routine site inspection must be performed consistent with Part 3 of this permit.

4.1.2 Exceptions to Routine Site Inspections

Inactive and Unstaffed Sites: The requirement to conduct routine site inspections on a quarterly basis does not apply to a site that is inactive and unstaffed, provided that no industrial materials or activities are exposed to stormwater. Such a site is only required to conduct one routine site inspection each calendar year. To invoke this exception, the permittee shall do the following:

- Maintain a statement in the SWPPP indicating that the site is inactive and unstaffed, and that there are no industrial materials or activities exposed to precipitation, in accordance with the substantive requirements in 40 CFR 122.26(g)(4)(iii). The statement must be signed and certified in accordance with Appendix B, Subsection 9.
- If circumstances change and industrial materials or activities become exposed to stormwater or the site becomes active and/or staffed, this exception no longer applies and the permittee shall immediately resume routine quarterly inspections.
- Within 30 calendar days of becoming inactive and unstaffed or reverting back to an active and staffed site, the permittee must modify the NOI in myDEQ to update the status of the site.

For permittees with inactive and unstaffed facilities that are unable to meet the “no industrial materials or activities exposed to stormwater” standard, the frequency of inspections is reduced to two routine inspections each calendar year. These two inspections shall be conducted in the opposing wet seasons and at least three months apart. Compliance with any additional sector-specific conditions in Part 8 is still required. Wet seasons, for the purposes of routine site inspections at inactive or unstaffed sites, are defined as follows:

- Summer wet season: June 1 – October 31
- Winter wet season: November 1 – May 31

4.2 Visual Assessment of Stormwater Discharges

The permittee, during normal site operating hours, shall perform two visual assessments during the summer wet season and two visual assessments during the winter wet season when the site is discharging.

Wet seasons, for the purposes of visual assessments, are defined as follows:

- Summer wet season: June 1 – October 31

- Winter wet season: November 1 – May 31

The term 'wet season' applies statewide and includes areas of the state where freezing conditions exist that prevent runoff from occurring for extended periods. In areas where freezing conditions exist, the four visual assessments may be distributed during seasons when precipitation runoff occurs.

Visual assessment requirements in this permit begin immediately after authorization to discharge is received by the permittee unless authorization is received 90 calendar days or more after a wet season has begun, in which case visual assessments shall commence with the start of the next wet season.

4.2.1 Visual Assessment Procedures

Twice per wet season for the permit term, the permittee shall collect a stormwater sample from each outfall (except as noted in Part 4.2.3) and conduct a visual assessment of that sample. The visual assessment samples are not required to be collected consistent with 40 CFR Part 136 procedures, but must be collected in such a manner that the samples are representative of the stormwater discharge. The visual assessment shall be made:

- Of a sample in a clean, colorless glass, or plastic container, and examined in a well-lit area;
- On samples collected within the first 30 minutes of an actual discharge from a storm event. If it is not possible to collect the sample within the first 30 minutes of discharge, the sample must be collected as soon as practicable after the first 30 minutes and the permittee shall document why it was not possible to take samples within the first 30 minutes. In the case of snowmelt, samples shall be taken during a period with a measurable discharge from the site; and
- On discharges that occur at least 72 hours (3 calendar days) from a previous discharge.

The permittee shall visually inspect the sample for the following water quality characteristics:

- Color;
- Odor;
- Clarity;
- Floating solids;
- Settled solids;
- Suspended solids;
- Foam;
- Oil sheen; and
- Other obvious indicators of stormwater pollution.

4.2.2 Visual Assessment Documentation

The permittee shall document the results of the visual assessments and maintain this documentation with the SWPPP. The visual assessment findings need not be submitted to ADEQ, unless specifically requested by the Department. At a minimum, the documentation of the visual assessment shall include, but not be limited to:

- Sample location(s);
- Sample collection date and time, and visual assessment date and time for each sample;
- Personnel collecting the sample and performing visual assessment, and their signatures;

- Nature of the discharge (i.e., runoff or snowmelt);
- Results of observations of the stormwater discharge;
- Probable sources of any observed stormwater contamination; and
- If applicable, why it was not possible to take samples within the first 30 minutes; and
- Signature of person conducting the visual assessments.

4.2.3 Exceptions to Visual Assessments of Stormwater Discharges

4.2.3.1 Absence of Discharge: If no storm event results in a discharge from the site or outfall(s) during a wet season, the permittee is excused from visual assessment for the site or outfall(s) for that season provided the permittee documents the absence of discharge in the visual assessment documentation record and retains that record with the SWPPP.

4.2.3.2 Adverse Weather Conditions: Adverse conditions are those that are dangerous or create inaccessibility for personnel, such as local flooding, high winds, or electrical storms, or situations that otherwise make sampling unsafe. When adverse conditions prevent the collection of either visual assessment sample in a given wet season, the permittee shall document the adverse weather conditions in the monitoring record and retain those records with the SWPPP.

4.2.3.3 Substantially Identical Outfalls: If the site has two or more outfalls that discharge substantially identical pollutants, the permittee may conduct visual assessments of the discharge at just one of the identical outfalls. If possible, visual assessments at substantially identical outfalls shall be performed on a rotating basis throughout the period of permit coverage. When invoking the substantially identical outfall provision, the permittee shall identify the identical outfalls in the monitoring record and retain those records with the SWPPP.

If a visual assessment collected at a substantially identical outfall demonstrates that control measures are not functioning as intended, the permittee shall assess and modify the control measures as appropriate at each substantially identical outfall represented by the monitored outfall.

4.2.3.4 Inactive and Unstaffed Sites: The requirement for a routine visual assessment does not apply at a site that is inactive and unstaffed, provided that no industrial materials or activities are exposed to stormwater. To invoke this exception, the permittee shall do the following:

- Maintain a statement in the SWPPP indicating that the site is inactive and unstaffed, and that there are no industrial materials or activities exposed to precipitation, in accordance with the substantive requirements in 40 CFR 122.26(g)(4)(iii). The statement must be signed and certified in accordance with Appendix B, Subsection 9.
- If circumstances change and industrial materials or activities become exposed to stormwater or the site becomes active and/or staffed, this exception no longer applies and the permittee shall immediately resume visual assessments.
- Within 30 calendar days of becoming inactive and unstaffed or reverting back to an active and staffed site, the permittee must modify the NOI to update the status of the site.

Except as provided by Part 8, permittees with inactive and unstaffed facilities that include documentation with the SWPPP that they are unable to meet the “no industrial materials or activities exposed to stormwater” standard shall conduct at least one visual assessment each calendar year.

5.0 Stormwater Pollution Prevention Plan (SWPPP)

A Stormwater Pollution Prevention Plan (SWPPP) that meets the requirements of Parts 5 and 8 of this permit shall be prepared by qualified personnel prior to submitting a NOI.

5.1 Contents of the Site's SWPPP

5.1.1 SWPPP Content

The SWPPP, at a minimum, shall contain and identify the following requirements:

- Stormwater Pollution Prevention Team by name, title, or role;
- A site description, including a discussion of industrial activities that occur at the site;
- A generalized location map (e.g. a USGS quadrangle map) with all protected surface water(s) receiving stormwater discharges from the facility identified;
- A detailed site map (see Part 5.1.2);
- Summary of pollutant sources;
- List of significant spills and leaks of pollutants that occurred in the past three years;
- Document the occurrence of unauthorized non-stormwater discharges;
- A description of control measures that will be used to ensure compliance with the requirements in Part 2.1 and Part 2.2.1;
- The schedule, practices and procedures for the following: good housekeeping, control measure maintenance / repair measures, spill prevention/ response, erosion/ sediment controls, and type and frequency of employee training;
- The schedule and documentation procedures utilized for site inspections and visual assessment monitoring;
- A description of stormwater monitoring and sampling procedures, including outfall identification and describe any exemptions to monitoring (such as inactive/ unstaffed site and/or rationale for any substantially identical outfall determinations);
- A Sampling and Analysis Plan (see Part 6.1.5), if required, including previous sampling results for the previous permit term; and
- Signature requirements (see Part 5.2)

If the SWPPP refers to procedures in other site documents, such as other environmental permits, a Spill Prevention Control and Countermeasure (SPCC) Plan or an Environmental Management System (EMS), copies of the relevant portions of those documents must be kept with the SWPPP if they are incorporated to satisfy SWPPP requirements.

5.1.2 Site Map Requirements

Provide a legible site map (or maps) completed to scale, that identifies the following:

- Boundaries of the property;
- Designation of area(s) associated with industrial activities;
- Identification of adjacent properties;
- Directions of stormwater flow for areas of the site that generate stormwater discharges with a reasonable potential to contain pollutants (e.g. topographic map or arrows as necessary to depict stormwater flow direction);
- Locations of all stormwater conveyances including ditches, pipes, and swales;
- Locations of major structural stormwater control measures;
- Locations of protected surface waters receiving the site's discharges and any special waters clearly labeled within 2.5 miles of the site (can be identified on a generalized site map);
- Locations where the site's stormwater discharges to a regulated MS4 (where applicable);
- Locations where significant spills or leaks have occurred in the past three years;

- Locations of outfalls with a unique identification code for each feature;
- An approximate outline of the areas draining to each outfall;
- Identification of which outfalls are considered sampling points;
- Identification of which outfalls are being treated as substantially identical outfalls;
- Locations of outfalls that are inactive or no longer used as outfalls, if practicable;
- Identification of all outfalls that include allowable non-stormwater discharges under Part 1.1.3;
- Location of on-site drywell(s) and their registration number(s);
- Sources of run-on to the site from adjacent property that may contain pollutants;
- Locations of the following activities and features that are exposed to stormwater with the potential to discharge pollutants, including but not limited to:
 - fueling stations;
 - vehicle and equipment maintenance and/or cleaning areas;
 - loading/unloading areas; locations used for the treatment, storage, or disposal of wastes;
 - liquid storage tanks;
 - processing/storage areas;
 - transfer areas for bulk materials, and;
 - access roads/rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the site.

5.2 Signature Requirements

The permittee shall sign and date the SWPPP in accordance with Appendix B, Subsection 9. If the SWPPP covers more than one site or activity, each permittee must certify the SWPPP in accordance with Appendix B, Subsection 9.

5.3 Required SWPPP Modifications

The permittee shall keep an up to date SWPPP. The permittee shall modify the SWPPP whenever necessary to address the triggering conditions for corrective action in Part 3.1. Changes to the SWPPP to reflect corrective actions shall be made in accordance with the corrective action deadlines in Part 3.2.

5.4 SWPPP Availability

The permittee shall retain a copy of the current SWPPP at the site, and it shall be made immediately available to ADEQ, EPA (only if the SWPPP covers a discharge to a WOTUS), or another Federal, State, or local agency having stormwater program authority, or to the operator of a regulated MS4 receiving discharges from the site, at the time of an onsite inspection or upon request.

Inactive and Unstaffed Sites: Permittees with facilities that meet the requirements for inactive and unstaffed are not required to maintain the SWPPP on-site. However, the SWPPP must be locally available (i.e., in Arizona) and must be on-site when conducting the inspections required by Part 4. For the purpose of a regulatory inspection, the SWPPP shall be made available to ADEQ, EPA (only if the SWPPP covers a discharge to a WOTUS), or other Federal, State, or local authority having stormwater program authority, within 48 hours of request.

5.5 SWPPP Submittal

As part of the permitting process, or upon written notification from ADEQ, the permittee shall submit a complete and up-to-date copy of the SWPPP to the Department in response to the following criteria:

- The site is located within 2.5 miles of a special water (Note: during the SWPPP review ADEQ will evaluate relevant site conditions such as location (upgradient/downgradient) of

special waters, the potential for pollutant to be present in the discharge, and whether analytical monitoring will be required). NOTE: A SWPPP does not need to be submitted for discharges to a non-WOTUS protected surface water that is identified as an impaired, not-attaining, and or OAW;

- ADEQ has determined stormwater discharges are (or have the potential to) causing or contributing to the exceedance of a surface water quality standard;
- As the result of an inspection conducted by ADEQ or U.S. EPA;
- To demonstrate compliance with permit conditions;
- A complaint about the site or discharge activity was submitted to ADEQ; and
- The SWPPP has been requested as part of a public records request.

All SWPPPs submitted to ADEQ shall be done so electronically using the online myDEQ portal.

Anytime a SWPPP is submitted to ADEQ for review, the applicable review fee must be included (A.A.C. R18-14-109).

Permittees who submitted their SWPPP under the previous permit are not required to automatically re-submit their SWPPP as part of the NOI process to obtain coverage under this permit.

5.6 Additional SWPPP Documentation Requirements

The permittee shall keep the following maintenance, corrective action, inspections, visual assessment results, monitoring, employee training and certification records complete and up-to-date filed with the site's SWPPP. The additional SWPPP documentation requirements are intended to demonstrate the site's compliance with conditions of this permit:

- A copy of the electronic NOI Summary and NOI Authorization Certificate, including any other correspondence from the Department that is related to this permit coverage;
- A copy of this permit (an electronic copy easily available to SWPPP personnel is also acceptable). A copy of the permit does not need to be included if permittee has to submit a SWPPP to ADEQ for review;
- Documentation of maintenance and repairs of structural control measures, including the dates of regular maintenance, date of discovery of control measures in need of repair/replacement, the date(s) that the structural control measure(s) returned to full function, and the justification for any extended repair schedules (see Part 2.2.1.2.3). If records of maintenance is extensive, an electronic record shall be made readily available upon request;
- Corrective action documentation (see Part 3.2);
- All inspection reports: the Routine Site Inspection Reports (see Part 4.1), and the Visual Assessment Reports (see Part 4.2);
- Description of any deviations from the regular schedule for visual assessments and/or analytical monitoring, and the reason for the deviations (e.g., adverse weather) (see Part 4.2.3);
- Monitoring results (can be a copy of the electronic DMR), including any exemptions to monitoring;
- Records of employee training, including date training received (see Part 2.2.1.2.9). If records of employee training are extensive, an electronic record shall be made readily available upon request;
- Documentation of any AIM Exceptions (see Part 6.3.6);
- Maintain a statement in the SWPPP indicating that the site is inactive and unstaffed. The statement must be signed and certified in accordance with Appendix B, Subsection 9.
- Facilities, including those with co-permittees, may retain copies of records and documentation required by this permit electronically or at locations other than with the SWPPP, however, the records must be accessible and the SWPPP shall clearly identify where the information is kept.

6.0 Analytical Monitoring Program

In addition to visual assessments required in Part 4.2, permittees subject to analytical monitoring shall analyze stormwater samples, in accordance with Part 6 and any sector-specific requirements in Part 8 for discharges to a WOTUS.

Consistent with Part 2.2.1.2 for dischargers to non-WOTUS protected surface waters, a permittee may either (1) elect to implement the measures defined in Parts 2.2.1.2.1- 2.2.1.2.10, including SWPPP requirements and Part 8 (sector specific measures) or; (2) conduct the analytical monitoring required by Part 6 and Part 8 (sector specific monitoring).

For discharges to non-WOTUS protected surface waters, the permittee may elect to analyze for the dissolved fraction when conducting metals sampling in Part 8 if there is a SWQS in the non-WOTUS protected surface water for that parameter that is expressed as dissolved. The metals that are subject to the dissolved fraction and may have a SWQS in a non-WOTUS protected surface water include: cadmium, chromium III, copper, lead, nickel, silver and zinc. Otherwise monitoring shall be for total metals.

6.1 Analytical Monitoring Procedures

6.1.1 Analytical Monitoring Types

This permit specifies five separate types of analytical monitoring. Depending on the industrial activity, discharge activity, site location, type of protected surface water, or potential to cause or contribute to an exceedance of a surface water quality standard in the protected surface water, any or all of the monitoring requirements may be applicable:

- Routine analytical;
- Effluent Limitation Guidelines (ELGs) (does not apply to discharges to non-WOTUS protected surface water);
- Impaired Water (includes Not-attaining);
- Outstanding Arizona Water (does not apply to discharges to non-WOTUS protected surface water);
and/or
- Other monitoring prescribed by ADEQ.

If analytical monitoring of discharges from the site is required, a summary of the monitoring requirements consistent with this permit (frequency, analytical parameters, etc.) will be included with the authorization certificate issued through myDEQ, or in a separate written notification from ADEQ.

6.1.2 When to Collect Samples

Monitoring requirements in this permit begin within 90 calendar days of receiving the authorization to discharge. Unless otherwise specified by ADEQ, analytical monitoring shall be conducted one time per wet season (two times per year) for the duration of permit coverage for all types of monitoring (see Part 6.1.1), except Effluent Limitation Guidelines (ELGs) monitoring. ELG monitoring shall be conducted once per year.

Sampling must occur when there is sufficient stormwater discharge to allow for the collection of a representative sample using sampling methods described in Part 6.1.3. Wet seasons are as follows:

Winter Wet Season: November 1 – May 31
Summer Wet Season: June 1 – October 31

The term 'wet season' includes areas of the state where freezing conditions exist that prevent runoff from occurring for extended periods. In areas where freezing conditions exist, the required monitoring and sample collection may be distributed during seasons when precipitation runoff, either as melting snow or rain mixed with melting snow, occurs.

Monitoring must be performed on a storm event that results in a discharge from the site that follows the preceding measurable storm event by at least 72 hours (3 calendar days), or the permittee can document that less than a 72-hour interval is representative for local storm events during the sampling period. In the case of snowmelt, the monitoring must be performed at a time when a measurable discharge occurs at the site.

6.1.3 How to Collect Samples

Samples collected for the purpose of this permit shall be either discrete (grab) samples or flow-weighted composite samples. Samples may be collected using an automatic sampler, manually by qualified personnel, a continuous sampler (for flow-weighted composite samples only), or by using a passive sampler (if appropriate).

Whenever possible, grab samples must be collected within the first 30 minutes of a stormwater discharge. If it is not possible to collect the sample within the first 30 minutes of a stormwater discharge, the sample must be collected as soon as practicable. Documentation must be kept with the SWPPP explaining why it was not possible to take samples within the first 30 minutes.

Flow-weighted composite samples for a stormwater discharge may be taken with a continuous sampler or as a combination of a minimum of three sample aliquots (sample portions) taken in each hour of discharge for the entire discharge or for the first three hours of the discharge, with each aliquot being separated by a minimum period of fifteen minutes. For flow-weighted samples, only one analysis of the composite of aliquots is required. Flow-weighted sampling protocol is adapted from 40 CFR 122.21 (individual permit application requirements for industrial stormwater permits).

Note – analysis of the following parameters must be from discrete (not composite) samples: pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, and fecal coliform.

The NOI certificate will specify for each applicable action level which fraction (total or dissolved) is required. For metals analysis where the action level is in the dissolved fraction, the permittee has the option to have the sample analyzed for total or dissolved for routine analytical monitoring requirements.

6.1.4 Where to Sample

Samples shall be collected from each outfall where industrial stormwater discharges from the permitted site occur. This may be a discrete pipe, ditch, channel, overland (sheet) flow, or other location(s) so long as the stormwater is representative of the discharge of industrial activities conducted at the site.

In the event there are two or more outfalls that are composed of the same, or substantially similar, stormwater discharge characteristics (substantially identical outfalls), the number of sampling locations can be reduced. The permittee may monitor the discharge at one outfall and report the sampling results for the other substantially identical outfalls. Substantially identical outfalls are based on:

- Similarities of general industrial activities and control measures;
- Exposed material that may significantly contribute pollutants to stormwater; and
- Similar runoff coefficient of their drainage area.

The SWPPP must identify each outfall authorized by this permit and describe the rationale for the substantially identical outfall determination. The substantially identical outfall provision cannot be applied to outfalls with numeric effluent limit guidelines or outfalls that discharge to Outstanding Arizona Waters.

If discharges authorized by this permit commingle with discharges not authorized under this permit, any required sampling of the authorized discharges must be performed at a point before they mix with other waste streams, to the extent practicable.

6.1.5 Sampling and Analysis Plan (SAP)

Any permittee subject to monitoring shall develop a written SAP covering all analytical monitoring required by this permit. The SAP shall be included with the site's SWPPP. The SAP shall include the following:

- Sample Collection, Preservation, Tracking, and Handling Information;
- Calibration and Maintenance of Monitoring Equipment; and
- Analytical Methods and Laboratories.

Other than parameters required to be sampled at the time of sample collection (e.g., field parameters), all samples shall be analyzed by a laboratory that is licensed by the Arizona Department of Health Service (ADHS) Office of Laboratory Licensure and Certification. The samples shall be analyzed using analytical methods with a limit of quantitation (LOQ) that is at or below the prescribed permit limits. All laboratory analyses shall be conducted according to test procedures specified in 40 CFR 136, unless other test procedures have been specified in this general permit.

For those discharges to non-WOTUS protected surface waters, if the parameter includes an analysis solely for total metals, the permittee can substitute the dissolved fraction for that parameter.

6.2 Required Monitoring

When more than one type of monitoring for the same parameter at the same outfall applies, a single sample may be used to satisfy both monitoring requirements. All required monitoring shall be conducted in accordance with the procedures described in Appendix B, Subsection 11.D.

6.2.1 Routine Analytical Monitoring

The permittee shall monitor stormwater discharges for all routine analytical monitoring parameters specified for the primary industrial activity and any co-located industrial activities. Routine analytical monitoring requirements for specific sectors are described in Part 8 and the parameters for monitoring will be included on the final permit authorization certificate.

Routine analytical monitoring data is primarily for the site to use in order to determine the overall effectiveness of the control measures and to assist the permittee in determining when additional corrective action(s), if necessary, may be needed to comply with the effluent limitations in Part 2.

Action levels for each parameter will be included on the Discharge Monitoring Report form. The action levels are based on the lowest applicable acute surface water quality standards for the protected surface water (with the exception of TSS that is typically set at an action level that is sector specific). If no acute standard exists, the lowest chronic standard will apply.

Some routine analytical monitoring action levels for certain metals are dependent on water hardness (See Appendix D). For any sectors required to conduct routine analytical monitoring for a hardness dependent metal (see Section 8.0), the hardness of the protected surface water (if stormwater is discharged to a perennial or intermittent water) or the hardness of the stormwater discharge (if the stormwater discharge is to an ephemeral wash) shall be analyzed in order to calculate the routine analytical monitoring action levels. The formulas used to calculate the action level for a specific metal using a hardness value, are located in individual tables at the end of A.A.C. R18-11, Appendix A, Table 2 through Table 9. The action level for that specific metal, will be the lowest formula driven (from Tables 2 through 9) acute designated use that applies to that protected surface water. If no acute standard exists, the lowest chronic standard will apply.

For discharges to non-WOTUS protected surface waters, the permittee may elect to analyze for the dissolved fraction when conducting metals sampling in Part 8 if there is a SWQS in the non-WOTUS protected surface water for that parameter that is expressed as dissolved. The metals that are subject to the dissolved fraction and may have a SWQS in a non-WOTUS protected surface water include: cadmium, chromium III, copper, lead, nickel, silver and zinc. Otherwise monitoring shall be for total metals.

Data Exceeding an Action Level for a Routine Analytical Monitoring Sampling Event

If a sample result is above an action level for routine analytical monitoring, the permittee must follow the Additional Implementation Measures (AIM) process in Part 6.3.

6.2.2 Effluent Limitation Guidelines Monitoring (Applicable only to discharges to WOTUS)

Effluent Limitation Guidelines (ELGs) are national limits established in federal rule (see 40 CFR 425 et seq.). Industrial activities that are subject to ELG monitoring are specified in Part 8 of this permit. Exceedance of an ELG constitutes a violation of this permit, requires compliance monitoring (Part 6.4) and corrective action pursuant to permit Part 3.0. Analytical monitoring for ELGs is required one time per calendar year (one sample per wet season does not apply to ELG monitoring). ELG monitoring does not apply to discharges to non-WOTUS protected surface water.

The substantially identical outfall and the inactive and unstaffed monitoring exemptions does not apply to ELG monitoring.

6.2.3 Impaired and Not-Attaining Waters Monitoring

For an industrial stormwater discharge from the site to a water listed as impaired and/or not-attaining (or to an upstream tributary within 2.5 miles), analytical monitoring may be required for the pollutant of concern (parameter(s) for which the protected surface water is impaired), under this permit to ensure protection of the protected surface water and attainment of designated use(s). If monitoring is required, the type, frequency, and analytical parameters will be included in the final permit authorization certificate.

If the protected surface water is impaired for suspended solids, turbidity or sediment/sedimentation and the discharge occurs for more than 48 hours after the storm event, the permittee shall monitor for suspended sediment concentration (SSC). If the pollutant for which the protected surfacewater is impaired is expressed in the form of an indicator or surrogate pollutant, the permittee shall monitor for that indicator or surrogate pollutant. No monitoring is required when a protected surface water's biological communities are impaired but no pollutant, including indicator or surrogate pollutants, is specified as causing the impairment, or when a protected surface water's impairment is related to hydrologic modifications, impaired hydrology, or temperature.

The discharge of a pollutant above an adopted Waste Load Allocation (WLA) or Total Maximum Daily Load (TMDL) for a not-attaining water, requires corrective action pursuant to permit Part 3.0.

6.2.4 Outstanding Arizona Water Monitoring (Applicable only to discharges to WOTUS)

In the event any industrial stormwater discharged from the site is within 2.5 miles (upstream tributary) of a water that is listed as an Outstanding Arizona Water, analytical monitoring will be required under this permit to ensure protection of the protected surface water and attainment of designated use(s). OAW monitoring does not apply to discharges to non-WOTUS protected surface waters.

The parameters to be monitored will be determined by ADEQ and will be dependent on the site’s industrial activities and location relative to the OAW.

The substantially identical outfall and the inactive and unstaffed monitoring exemptions do not apply to OAW monitoring.

If the discharge of a pollutant has been determined by ADEQ to be degrading existing water quality in an OAW, the permittee shall conduct corrective action pursuant to permit Part 3.0.

6.2.5 Additional Monitoring Required by ADEQ

ADEQ may notify the permittee of additional discharge monitoring required to ensure protection of protected surface water quality in cases where there is evidence that a discharge may be causing or contributing to exceedances of a surface water quality standard in the protected surface water. Any such notice will be in writing and will provide an explanation of the reasons for the monitoring, locations, and parameters to be monitored, frequency and reporting requirements.

6.3 Additional Implementation Measures

If any of the following AIM triggering events in Parts 6.3.3, 6.3.4, or 6.3.5 occur, the permittee must follow the response procedures described in those parts, called “additional implementation measures” or “AIM.” There are three AIM levels: AIM Level 1, Level 2, and Level 3. The permittee must respond as required to different AIM levels which prescribe sequential and increasingly robust responses when an action level exceedance occurs. The permittee must follow the corresponding AIM level responses and deadlines described in Parts 6.3.3, 6.3.4, and 6.3.5 unless the facility qualifies for an exception under Part 6.3.6.

6.3.1 Baseline Status

Once the permittee receives discharge authorization under this permit per Part 1.3, the facility is in a baseline status for all applicable routine analytical monitoring parameters. If an AIM triggering event occurs and the facility has proceeded sequentially to AIM Level 1, 2 or 3, the facility may return directly to baseline status once the corresponding AIM-level response and conditions are met.

6.3.2 AIM Triggering Events

If the routine analytical monitoring average result of two wet seasons exceeds an applicable action level based on the following events, the AIM requirements have been triggered for that parameter. The permittee must follow the corresponding AIM-level responses and deadlines described in Parts 6.3.3, 6.3.4, and 6.3.5 unless the facility qualifies for an exception under Part 6.3.6. An annual average exceedance for a parameter can occur if:

- The average of analytical results from two consecutive wet seasons exceeds the action level for that parameter.
- The result of a single sampling event exceeds more than two times the action level for that parameter.

How to calculate an average:

- When all results are greater than or equal to the limit of quantitation (LOQ), all values are averaged.
- If some results are less than the LOQ but greater than the limit of detection (LOD), use the LOD value in the averaging.
- Use '0' for values less than the LOD.

Following the occurrence of an AIM triggering event per Part 6.3.2, the permittee must complete and submit a Control Measure Assessment Report on a form provided by the Department per Part 7.2.

6.3.3 AIM Level 1

The facility's status changes from baseline to AIM Level 1 if monitoring results indicate that an AIM triggering event per Part 6.3.2 has occurred, unless the permittee qualifies for an exception under Part 6.3.6.

6.3.3.1 AIM Level 1 Response

If any of the triggering events in Part 6.3.2 occur, the permittee must:

Review SWPPP/Control Measures. Immediately review the SWPPP and the selection, design, installation, and implementation of control measures to ensure the effectiveness of existing measures and determine if modifications are necessary to meet the action level for the applicable parameter, and Implement Additional Measures. After reviewing the SWPPP/control measures, the permittee must implement additional measures, considering good engineering practices, that would reasonably be expected to bring the exceedances below the parameter's action level; or if the permittee determines nothing further needs to be done with the control measures, the permittee must document per Part 6.3.7 and complete and submit a Control Measure Assessment Report on a form provided by the ADEQ (permit Part 7.2).

6.3.3.2 AIM Level 1 Deadlines

If any modifications to or additional control measures are necessary in response to AIM Level 1, the permittee must implement those modifications or control measures within 30 calendar days of receipt of laboratory results, unless doing so within 30 calendar days is infeasible. If doing so within 30 calendar days is infeasible, the permittee must document in the Control Measure Assessment Report why it is infeasible and implement such modifications within 45 calendar days. ADEQ may also grant the permittee an extension beyond 45 calendar days, based on an appropriate demonstration by the permittee.

6.3.3.3 AIM Level 1 Status Update

While in AIM Level 1 status, the facility may either:

- Return to Baseline Status. AIM Level 1 status will return to baseline status if the AIM Level 1 responses have been met and continued routine analytical monitoring results indicate that an AIM triggering event per Part 6.3.2 has not occurred after an additional two wet seasons (i.e., the action level is no longer exceeded for the parameter(s)).
- Advance to AIM Level 2. The facility's AIM Level 1 status advances to AIM Level 2 status if the permittee have completed AIM Level 1 responses and the continued routine analytical monitoring results indicate that an AIM triggering event per Part 6.3.2 has occurred (i.e., the action level continues to be exceeded for the same parameter(s)).

6.3.4 AIM Level 2

The facility's status changes from AIM Level 1 to AIM Level 2 if continued routine analytical monitoring results indicate that an AIM triggering event per Part 6.3.2 has occurred (i.e., the action level continues to be exceeded for the parameter(s)), unless the facility qualifies for an exception under Part 6.3.6.

6.3.4.1 AIM Level 2 Response

If any of the events in Part 6.3.2 occur, the permittee must review the SWPPP and implement additional pollution prevention/good housekeeping control measures, considering good engineering practices, beyond what was done in the AIM Level 1 responses that would reasonably be expected to bring the exceedances below the parameter's action level.

6.3.4.2 AIM Level 2 Deadlines

The permittee must implement additional pollution prevention/good housekeeping control measures within 30 calendar days of receipt of laboratory results that indicate an AIM triggering event has occurred and document per Part 6.3.7 how the measures will achieve action levels. If it is feasible for the permittee to implement a measure, but not within 30 calendar days, the permittee may take up to 45 calendar days to implement such measure. The permittee must document in the Control Measure Assessment Report why it was infeasible to implement such measure in 30 calendar days. ADEQ may also grant the permittee an extension beyond 45 calendar days, based on an appropriate demonstration by the permittee.

6.3.4.3 AIM Level 2 Status Update

While in AIM Level 2 status, the permittee may either:

- Return to Baseline Status. The facility's AIM Level 2 status will return to baseline status if the AIM Level 2 responses have been met and continued routine analytical monitoring results indicate that an AIM triggering event per Part 6.3.2 has not occurred after an additional two wet seasons (i.e., the action level is no longer exceeded for the parameter(s)).
- Advance to AIM Level 3. The facility's AIM Level 2 status advances to AIM Level 3 status if the permittee has completed AIM Level 2 responses and the continued routine analytical monitoring results indicate that an AIM triggering event per Part 6.3.2 has occurred (i.e., the action level continues to be exceeded for the same parameter(s)).

6.3.5 Aim Level 3

The facility's status changes from AIM Level 2 to AIM Level 3 if the continued routine analytical monitoring results indicate that an AIM triggering event per Part 6.3.2 has occurred (i.e., the action level continues to be exceeded for the parameter(s)), unless the facility qualify for an exception under Part 6.3.6.

6.3.5.1 AIM Level 3 Response

If any of the triggering events in Part 6.3.2 occur, the permittee must install structural source controls (e.g., permanent controls such as permanent cover, berms, and secondary containment), and/or treatment controls (e.g., sand filters, hydrodynamic separators, oil-water separators, retention ponds, and infiltration structures), except as provided in Part 6.3.6 (AIM Exceptions). The controls or treatment technologies or treatment train installed shall be appropriate for the pollutants that triggered AIM Level 3 and should be more rigorous than the pollution prevention/good housekeeping-type control measures implemented under AIM Level 2 in Part 6.3.4. The permittee must select controls with pollutant removal efficiencies that are sufficient to bring the exceedances below the action level. The permittee must install such control measures for the discharge point(s) in question and for substantially identical outfalls, unless the permittee individually monitors those substantially identical outfalls and demonstrate that AIM Level 3 requirements are not triggered at those discharge points.

6.3.5.2 AIM Level 3 Deadlines

The permittee must identify the schedule for installing the appropriate structural source and/or treatment control measures within 30 calendar days and install such measures within 60 calendar days. If it is not feasible within 60 calendar days, the permittee may take up to 90 calendar days to install such measures, documenting in the Control Measure Assessment Report why it is infeasible to install the measure within 60 calendar days. ADEQ may also grant the permittee an extension beyond 90 calendar days, based on an appropriate demonstration by the permittee.

6.3.5.3 AIM Level 3 Status Update

While in AIM Level 3 status, the permittee may either:

- Return to Baseline Status. The facility's AIM Level 3 status will return to baseline status if the AIM Level 3 responses have been met and continued routine analytical monitoring results

indicate that an AIM triggering event per Part 6.3.2 has not occurred after an additional two wet seasons (i.e., the action level is no longer exceeded for the parameter(s)).

- Continue in AIM Level 3. The facility's AIM Level 3 status will remain at Level 3 if the facility has completed the AIM Level 3 responses and the continued routine analytical monitoring results indicate that an AIM triggering event per Part 6.3.2 has occurred (i.e., the action level continues to be exceeded for the same parameter(s)). If the facility continues to exceed the action level for the same parameter even after compliance with AIM Level 3, ADEQ may require the permittee to apply for an individual permit.

6.3.6 AIM Exceptions

Following the occurrence of an AIM triggering event per Part 6.3.2, at any point or tier level of AIM, the permittee may qualify for an exception below from AIM requirements. Regardless if the facility qualifies for and claims an exception, the permittee must still review the control measures, SWPPP, and other on-site activities to determine if actions or modifications are necessary or appropriate in light of the action level exceedance(s). If claiming an AIM exception, the permittee must follow the requirements to demonstrate that the facility qualifies for the exception as provided below. If the facility qualifies for an exception, the permittee is not required to comply with the AIM responses for any parameters for which the permittee can demonstrate that the action level exceedance is:

6.3.6.1 Solely Attributable to Natural Background Pollutant Levels

The permittee must demonstrate that the action level exceedance is solely attributable to the presence of that pollutant in natural background sources, provided that all the following conditions are met:

- The average of samples from two consecutive wet seasons that exceeds the action level (or the result of a single sampling event exceeds more than two times the action level) is less than or equal to the concentration of that pollutant in the natural background; and
- The permittee shall document and maintain with the SWPPP, as required in Part 5.6, the supporting rationale for concluding that action level exceedances are in fact attributable solely to natural background pollutant levels. The permittee must include in the supporting rationale any data previously collected by the permittee or others (including literature studies) that describe the levels of natural background pollutants in the stormwater discharge. Natural background pollutants are those substances that are naturally occurring in soils or ground water. Natural background pollutants do not include legacy pollutants from earlier activity on the site, or pollutants in run-on from neighboring sources which are not naturally occurring, such as other industrial facilities or roadways.
- The permittee submits the analysis and documentation to ADEQ at stormwatercompliance@azdeq.gov within 30 calendar days of receipt of laboratory results that indicate an AIM trigger event.

6.3.6.2 Due to Run-On

The permittee must demonstrate that run-on from a neighboring source (e.g., a source external to the facility) is the cause of the exceedance, provided that all the following conditions are met:

- The permittee reviews and revises the SWPPP, if needed.
- The permittee submits analysis and documentation of run-on to ADEQ at stormwatercompliance@azdeq.gov.
- The permittee shall document and maintain with the SWPPP demonstration of the run-on event, as required in Part 5.6.

6.3.6.3 Due to an Abnormal Event:

The permittee must immediately document per Part 6.3.7 that the AIM triggering event was abnormal, including a description explaining what caused the abnormal event and an explanation of how any measures taken within 60 calendar days of such event will prevent a reoccurrence of the exceedance. The permittee must also collect a sample during the next measurable storm event to demonstrate that the result is less than the action level, in which case any AIM requirements are not triggered based on the abnormal event. The permittee must report the result of this sample in the DMR in lieu of the result from the sample that caused the AIM triggering event. The permittee may use the "abnormal" demonstration opportunity at any AIM Level, one time per parameter, and one time per discharge point per permit term, which shall include substantially identical outfalls, provided the facility qualifies for the

exception. The permittee shall document and maintain with the SWPPP demonstration of the abnormal event, as required in Part 5.6

6.3.6.4 Demonstrated to Not Result in Any Exceedance of Surface Water Quality Standards

The permittee must demonstrate to ADEQ within 60 calendar days of the AIM triggering event that the triggering event does not result in any exceedance of surface water quality standards. ADEQ may also grant the permittee an extension beyond 60 calendar days, based on an appropriate demonstration by the permittee. The demonstration shall be submitted to ADEQ at stormwatercompliance@azdeq.gov and the permittee shall maintain the demonstration with the SWPPP per Part 5.6. The demonstration must include the following minimum elements:

- the surface water quality standards applicable to the protected surface water;
- the ambient concentration of the parameter(s) of concern in the protected surface water immediately upstream and downstream of the discharge point;
- the concentration of the parameter(s) of concern in the stormwater discharge; and
- the hardness of the protected surface water, if the exception is for a hardness-dependent metal.

6.3.6.1 Documentation for AIM Exception

As described in Part 6.3.6 above, documentation for all AIM Exceptions shall be submitted to ADEQ at stormwatercompliance@azdeq.gov. The permittee must also maintain documentation of the exception with the SWPPP per Part 5.6. If ADEQ does not object to the Exception or request additional information within 30 calendar days of submittal of the documentation, the Exception is considered approved.

6.4 Accelerated Monitoring (Applicable only to discharges to WOTUS)

In the event a sample result exceeds an effluent limitation guideline (ELG), the permittee shall implement accelerated monitoring. ELG and associated accelerated monitoring do not apply to discharges to non-WOTUS protected surface waters.

The permittee shall sample each subsequent storm event that results in an industrial stormwater discharge.

Accelerated monitoring shall continue until the results for the parameters are below the respective limit for two consecutive sampling events.

Analytical results for accelerated monitoring shall be entered electronically using myDEQ into the electronic discharge monitoring report (e-DMR) within 30 calendar days of receiving the laboratory analytical results for each sampling event (see permit Part 7.1).

6.5 Exemptions or Exceptions to Analytical Monitoring

6.5.1 Absence of Discharge

If no storm event results in a discharge from the site or outfall(s) during a wet season, the permittee is excused from analytical monitoring for the site or outfall(s) for that season. An absence of discharge does not exempt the permittee from the requirement to file an electronic discharge monitoring report (e-DMR) in accordance with the site’s reporting schedule.

6.5.2 Adverse Weather Conditions

Adverse conditions are those that are dangerous or create inaccessibility for personnel, such as local flooding, high winds, electrical storms, or situations that otherwise make sampling unsafe. When adverse conditions prevent the collection of an analytical sample in a given wet season, the permittee shall document those conditions in the SWPPP and resume analytical monitoring in the subsequent wet season. Adverse conditions do not

exempt the permittee from the requirement to file an electronic discharge monitoring report (e-DMR) in accordance with the site's reporting schedule.

6.5.3 Substantially Identical Outfalls

The permittee may invoke the substantially identical outfalls provision for routine analytical and impaired/ not-attaining waters monitoring. The substantially identical outfall provision cannot be applied to outfalls with numeric effluent limitation guidelines or outfalls that discharge to OAWs. NOTE: because ELG and OAW monitoring are not required for discharges to non-WOTUS protected surface waters, the substantially identical outfalls provision can apply for those outfalls discharging to non-WOTUS protected surface waters.

The SWPPP must identify each outfall authorized by this permit and describe the rationale for the substantially identical outfall determination. Permittees invoking the substantially identical outfall provision must file an electronic discharge monitoring report (e-DMR) in accordance with the site's reporting schedule.

6.5.4 Inactive and Unstaffed Sites

The requirement for routine analytical monitoring and impaired and not-attaining waters monitoring does not apply at a site that is inactive and unstaffed, provided that no industrial materials or activities are exposed to stormwater. The inactive and unstaffed exemption to monitoring cannot be applied to outfalls with numeric effluent limitation guidelines or outfalls that discharge to OAWs. NOTE: because ELG and OAW monitoring are not required for discharges to non-WOTUS protected surface waters, the inactive and unstaffed site provision can apply for those outfalls discharging to non-WOTUS protected surface waters.

If a permitted site will be inactive and unstaffed, the permittee can suspend analytical monitoring. To be eligible for the suspended monitoring condition, the permittee shall within 30 calendar days of becoming inactive and unstaffed, update their NOI in myDEQ indicating the approximate time period for which the site will be inactive and unstaffed. The site status cannot retroactively be made inactive and unstaffed and, as such, all monitoring conditions apply until such time as ADEQ is notified of the inactive and unstaffed status (by modifying the NOI in myDEQ). *Note: Within 30 calendar days of becoming inactive and unstaffed or reverting back to an active and staffed site, the permittee must modify the NOI to update the status of the site.* If, after a six (6) month (or longer) period of inactive and unstaffed status, when a site becomes active and staffed, the permittee must update the NOI in myDEQ indicating the site is active and resume any monitoring requirements specified in this permit.

Sites that are subject to accelerated monitoring (6.4) are not eligible to suspend their monitoring program due to inactive and unstaffed designation.

Invoking the inactive and unstaffed monitoring provision does not exempt the permittee from the requirement to file an electronic discharge monitoring report (e-DMR) in accordance with the site's reporting schedule.

6.5.5 Exception for Stormwater Discharges to Ephemerals that are protected surface waters

Facilities that discharge to non-WOTUS segments of one of the eight major rivers listed in A.R.S. §49-221(G)(1)(b) Waters or an ephemeral that may transport pollutants by stormwater to protected surface water, are not required to monitor for Total Suspended Solids (TSS) and turbidity as part of the routine analytical monitoring requirements specified in Part 8.

6.6 Submittal of Monitoring Data

All permittees subject to analytical monitoring, or those that invoked an exemption/exception to monitoring, shall report to the Department on the electronic Discharge Monitoring Report (e-DMR) using myDEQ. The permittee shall retain records of all stormwater monitoring information and reports including exemptions to monitoring with the SWPPP.

The e-DMR shall be submitted within 30 calendar days after receiving laboratory results. In the event no samples are collected during a wet season, the e-DMR indicating “no data” using the appropriate No Discharge Information (NODI) code(s) shall be submitted no later than:

Winter Wet Season: June 30
Summer Wet Season: November 30

In the event a permittee elects to collect a flow-weighted sample in response to a stormwater discharge event, the following information must be included on the e-DMR:

- Identify it is a composite sample
- The number of aliquots that comprise the composite sample
- Time between each aliquot
- Flow rate
- Duration of discharge event

7.0 Reporting and Recordkeeping

7.1 Electronic Discharge Monitoring Report (e-DMR)

7.1.1 Who has to submit an e-DMR

Permittees who are subject to routine analytical monitoring, numeric effluent limitation guideline, impaired waters (with or without a TMDL), OAW and /or ADEQ requested monitoring data, shall prepare and submit the MSGP electronic Discharge Monitoring Report (e-DMR) that is available electronically using myDEQ. If there was “no discharge” for the monitoring period, the permittee must still submit an e-DMR indicating there was no discharge of stormwater for the reporting period using the No Data e-DMR or NODI (No Data Code Indicated) code of *No Discharge*. Additionally, if the site is inactive/ unstaffed, or other sampling exemptions apply, an e-DMR is still required to be submitted, however, the e-DMR will include no data or NODI code to explain why sampling was not completed for that reporting period. If subject to a non-WOTUS protected surface water sampling exemption, NODI code 9g- ADEQ waived sampling shall be used.

7.1.2 How to Submit an e-DMR

The permittee shall submit the e-DMR using myDEQ electronic reporting system available through the ADEQ website.

7.1.3 When to Submit the e-DMR

The permittee shall complete and submit e-DMR within 30 calendar days of receiving the laboratory analytical data.

If there is no sampling data for the reporting period because there was no discharge or another exemption to sampling applied, such as an inactive and unstaffed site, the e-DMR shall be submitted no later than the following:

Winter Wet Season:	June 30
Summer Wet Season:	November 30

7.2 Control Measure Assessment Report for Routine Analytical Monitoring

Within 30 calendar days of receiving the laboratory analytical data verifying that an AIM triggering event occurred per Part 6.3.2, the permittee shall complete and submit an electronic copy of the Control Measure Assessment Report to stormwatercompliance@azdeq.gov that includes the following information:

- Date of discovery;
- AIM Level triggered (1, 2 or 3)
- Description of the exceedance(s) (e.g., outfall ID, parameter(s), sample result, action level in permit);
- Summary of the reason(s) causing the exceedance;
- Explanation of the control measures that were evaluated and modified, if applicable, including the date of the evaluation and date of modification(s);
- Describe any other additional implementation measures as required by Part 6.3.3.1, 6.3.4.1, 6.3.5.1, if applicable;
- Verification that SWPPP updates were completed, where applicable; and
- A statement, signed and certified in accordance with Appendix B, Subsection 9.

7.3 Other Reporting Requirements

The permittee is subject to the reporting requirements stipulated in Part 7, in addition to the standard permit reporting provisions of Appendix B, Subsection 12.

The permittee must submit the following reports to the appropriate ADEQ Office listed in Part 7.6, as applicable.

- 7.3.1 24-hour Reporting** (see Appendix B, Subsection 12.e). The permittee must report any noncompliance which may endanger health or the environment. Any information must be provided orally within 24 hours from the time the permittee becomes aware of the circumstances;
- 7.3.2 5-day Follow-up Reporting** to the 24-hour reporting (see Appendix B, Subsection 12.e.(ii)). A written submission must also be provided within five calendar days of the time the permittee becomes aware of the circumstances;
- 7.3.3 Reportable Quantity Spills Reporting** (verbal report only). The permittee must provide notification, as required under Part 2.2.1.2.4, as soon as the permittee has knowledge of a leak, spill, or other release containing a hazardous substance or oil in an amount equal to, or in excess of a reportable quantity;
- 7.3.4 Planned Changes Report** (see Appendix B, Subsection 12.a). The permittee must give notice to ADEQ promptly, no fewer than 30 calendar days prior to making any planned physical alterations or additions to the permitted site that qualify the site as a new source or that could significantly change the nature or significantly increase the quantity of pollutants discharged. The requirement to provide notification of the change would qualify the site as a new source (Appendix B, Subsection 12.A(1)) applies if the facility discharges to a WOTUS;
- 7.3.5 Anticipated Noncompliance Report** (see Appendix B, Subsection 12.d). The permittee must give advance notice to ADEQ of any planned changes in the permitted site or activity which the permittee anticipates will result in noncompliance with permit requirements;
- 7.3.6 Transfer of Ownership and/or Operation Report** – (see Table 1-2);
- 7.3.7 Other Noncompliance Report** (see Appendix B, Subsection 12.f). The permittee shall report all instances of noncompliance annually using the Non-Compliance Report Form provided by the Department;
- 7.3.8 Missing or Incorrect Information Report** (see Appendix B, Subsection 12.g). The permittee must promptly submit facts or information once you become aware of the following: you failed to submit relevant facts in the NOI, or that incorrect information was submitted in the NOI or in any report; and
- 7.3.9** If the discharge enters a municipal separate storm sewer system, the permittee shall also submit reports to the MS4 operator.

7.4 Recordkeeping

The permittee shall retain copies of the SWPPP (including any modifications made to control measures during the term of this permit), additional documentation requirements pursuant to Part 5.6 (including documentation related to corrective actions taken pursuant to Part 3), all reports and certifications required by this permit, monitoring data, and records of all data used to complete the NOI to be covered by this permit, for a period of at least three (3) years from the date that the site's coverage under this permit expires or is terminated.

7.5 Submitting Reports to ADEQ

All documentation required by this permit shall be submitted electronically through myDEQ, if available. Notices of Intent (NOI), Notices of Termination (NOT), No Exposure Certifications (NEC) and Discharge Monitoring Report (e-DMR) forms shall be submitted electronically

through myDEQ. Corrective Action Reports (Part 3.2), Control Measure Assessment Reports (Part 7.2), and documentation of AIM exemptions (Part 6.3) shall be submitted electronically to stormwatercompliance@azdeq.gov. If electronic reporting is not available, paper documents shall be submitted to the following address until such time as electronic submissions become available:

Arizona Department of Environmental Quality
Water Quality Division - MSGP
1110 W. Washington Street, Mail Code 5415 A-1
Phoenix, AZ 85007

Part 8 – Sector-Specific Requirements for Industrial Activity

The permittee must comply with the requirements applicable to the site's industrial sector(s) in this Part, in addition to the requirements applicable to all facilities in Parts 1 through 7 and the appendices to the permit.

Subpart A – Sector A – Timber Products

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.A.1 Covered Stormwater Discharges

The requirements in Subpart A apply to stormwater discharges associated with industrial activity from Timber Products facilities as identified by the SIC Codes specified under Sector A in Table C-1 of Appendix C of the permit.

8.A.2 Limitation on Coverage

8.A.2.1 Prohibition of Discharges. (See also Part 1.1.4) Not covered by this permit: stormwater discharges from areas where there may be contact with the chemical formulations sprayed to provide surface protection. These discharges must be covered by a separate AZPDES permit.

8.A.2.2 Allowable Non-Stormwater Discharges. (See also Part 1.1.3) The following non-stormwater discharges are allowed by this permit provided the non-stormwater component of the discharge is in compliance with the requirements in Part 2.1.1 (Control Measure Selection).

- Discharges from the spray down of lumber and wood product storage yards where no chemical additives are used in the spray-down waters and no chemicals are applied to the wood during storage.
- Discharges from the spray down of lumber and wood product storage yards where no chemical additives are used in the spray-down waters and no chemicals are applied to the wood during storage (applicable only to Sector A facilities provided the non-stormwater component of the discharge is in compliance with the non-numeric effluent limits requirements in Part 2.2.1.2).

8.A.3 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.A.3.1 Good Housekeeping. (See also Part 2.2.1.2.2) In areas where storage, loading and unloading, and material handling occur, perform good housekeeping to limit the discharge of wood debris, minimize the leachate generated from decaying wood materials, and minimize the generation of dust.

8.A.4 Additional SWPPP Requirements

8.A.4.1 Drainage Area Site Map. (See also Part 5.1.2) Document in the site's SWPPP where any of the following may be exposed to precipitation or surface runoff: processing areas, treatment chemical storage areas, treated wood and residue storage areas, wet decking areas, dry decking areas, untreated wood and residue storage areas, and treatment equipment storage areas.

8.A.4.2 Inventory of Exposed Materials. (See also Part 5.1.3.2) Where such information exists, if the site has used chlorophenolic, creosote, or chromium-copper-arsenic formulations for wood surface protection or preserving, document in the site's SWPPP the following: areas where contaminated soils, treatment equipment, and stored materials still remain and the management practices employed to minimize the contact of these materials with stormwater runoff.

8.A.4.3 Description of Stormwater Management Controls. (See also Part 5.1.4) Document measures implemented to address the following activities and sources: log, lumber and wood product storage areas; residue storage areas; loading and unloading areas; material handling areas; chemical storage areas; and equipment and vehicle maintenance, storage, and repair areas. If the site performs wood surface protection and preservation activities, address the specific control measures for these activities.

8.A.5 Additional Inspection Requirements. (See also Part 4.1)

If the site performs wood surface protection and preservation activities, inspect processing areas, transport areas, and treated wood storage areas monthly to assess the usefulness of practices to minimize the deposit of treatment chemicals on unprotected soils and in areas that will come in contact with stormwater discharges.

8.A.6 Sector-Specific Routine Analytical Monitoring

Table 8.A-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector A. These parameters and action levels apply to both the site's primary industrial activity and any co-located industrial activities, which describe the site's activities.

Table 8.A-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector A1. General Sawmills and Planing Mills (SIC 2421)	Total Suspended Solids (TSS)	100 mg/L
	Total Zinc ¹	Hardness-Dependent
Subsector A2. Wood Preserving (SIC 2491)	Total Arsenic	Protected Surface Water Dependent (PSWD) ²
	Total Copper ¹	Hardness-Dependent
Subsector A3. Log Storage and Handling (SIC 2411)	Total Suspended Solids (TSS)	100 mg/L
Subsector A4. Hardwood Dimension and Flooring Mills; Special Products Sawmills, not elsewhere classified; Millwork, Veneer, Plywood, and Structural Wood; Wood Pallets and Skids; Wood Containers, not elsewhere classified; Wood Buildings and Mobile Homes; Reconstituted Wood Products; and Wood Products Facilities not elsewhere classified (SIC 2426, 2429, 2431-2439 (except 2434), 2441, 2448, 2449, 2451, 2452, 2493, and 2499)	Total Suspended Solids (TSS)	100 mg/L

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

² Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

8.A.7 Effluent Limitations Based on Effluent Limitations Guidelines (See also Part 6.2.2.)
 (Applicable only to discharges to WOTUS)

NOTE: This section does not apply for discharges to non-WOTUS protected surface waters.

Table 8.A-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

Table 8.A-2 ¹		
Industrial Activity	Parameter	Effluent Limitation
Discharges resulting from spray down or intentional wetting of logs at wet deck storage areas	pH	6.0 – 9.0 s.u.
	Debris (woody material such as bark, twigs, branches, heartwood, or sapwood)	No discharge of debris that will not pass through a 2.54-cm (1-in.) diameter round opening

¹ Monitor annually.

8.A.8 Credit for Pollutants in Intake Water

For discharges that are comprised solely of water drawn from the same body of water into which the discharges flow and that exceed an applicable effluent limitation, the permittee may be eligible for a credit to the extent necessary to meet the limitation. To obtain this credit, the permittee must show that the site’s discharge would meet the limitation in the absence of the pollutant(s) in the intake water by demonstrating that the control measures the site uses to meet the limitation would, if properly installed and operated, meet the limitations for the pollutant (i.e., the pollutant level in the discharge is in exceedance of the limitation due to the pollutant concentration in the source or intake water). The site must consult the ADEQ for guidance in seeking a pollutant credit under this Part. ADEQ will notify the permittee whether the site is eligible for the credit, and, if so, provide the scope of such credit.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart B – Sector B – Paper and Allied Products

The permittee shall comply with Part 8 sector-specific requirements associated with the site’s primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.B.1 Covered Stormwater Discharges.

The requirements in Subpart B apply to stormwater discharges associated with industrial activity from Paper and Allied Products Manufacturing facilities, as identified by the SIC Codes specified under Sector B in Table C-1 of Appendix C of the permit.

8.B.2 Sector-Specific Routine Analytical Monitoring Values. (See also Part 6.)

Table 8.B-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector B. These parameters and action levels apply to both the primary industrial activity and any co-located industrial activities.

Table 8.B-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector B1. Paperboard Mills (SIC Code 2631)	TSS	100 mg/L
	Chlorine (total residual)	Protected Surface Water Dependent (PSWD) ²

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart C – Sector C – Chemical and Allied Products Manufacturing, and Refining

The permittee shall comply with Part 8 sector-specific requirements associated with the site’s primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.C.1 Covered Stormwater Discharges

The requirements in Subpart C apply to stormwater discharges associated with industrial activity from Chemical and Allied Products Manufacturing, and Refining facilities, as identified by the SIC Codes specified under Sector C in Table C-1 of Appendix C of the permit.

8.C.2 Limitations on Coverage

8.C.2.1 Prohibition of Non-Stormwater Discharges (See also Part 1.1.4)

The following discharges are not authorized by this permit: non-stormwater discharges containing inks, paints, or substances (hazardous, nonhazardous, etc.) resulting from an onsite spill, including materials collected in drip pans; washwater from material handling and processing areas; and washwater from drum, tank, or container rinsing and cleaning.

8.C.3 Sector-Specific Routine Analytical Monitoring Values

Table 8.C-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector C. These parameters and action levels apply to both the site’s primary industrial activity and any co-located industrial activities.

Table 8.C-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector C1. Agricultural Chemicals (SIC 2873-2879)	Nitrate plus Nitrite Nitrogen	PSWD ²
	Total Lead ¹	Hardness-Dependent
	Total Iron	PSWD ²
	Total Zinc ¹	Hardness-Dependent
	Phosphorus	PSWD ²
Subsector C2. Industrial Inorganic Chemicals (SIC 2812-2819)	pH	6.0 – 9.0 s.u.
	Total Iron	PSWD ²
	Nitrate plus Nitrite Nitrogen	PSWD ²
Subsector C3. Soaps, Detergents, Cosmetics, and Perfumes (SIC 2841-2844)	Nitrate plus Nitrite Nitrogen	PSWD ²
	Phosphorus	PSWD ²
	Total Zinc ¹	Hardness-Dependent
Subsector C4. Plastics, Synthetics, and Resins (SIC 2821-2824)	Total Zinc ¹	Hardness-Dependent
	Vinyl chloride	PSWD ²

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

²PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

8.C.4 Effluent Limitations Based on Effluent Limitations Guidelines (See also Part 6.2.2.)
(Applicable only to discharges to WOTUS)

NOTE: This section does not apply for discharges to non-WOTUS protected surface waters.

Table 8.C-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

Table 8.C-2 ¹		
Industrial Activity	Parameter	Effluent Limitation
Runoff from phosphate fertilizer manufacturing facilities that comes into contact with any raw materials, finished product, by-products or waste products (SIC 2874)	Total Phosphorus (as P)	105 mg/L, daily maximum
		35 mg/L, 30-day avg.
	Fluoride	75.0 mg/L, daily maximum
		25.0 mg/L, 30-day avg.

¹ Monitor annually.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart D – Sector D – Asphalt Paving and Roofing Materials and Lubricant Manufacturing

The permittee shall comply with Part 8 sector-specific requirements associated with the site’s primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.D.1 Covered Stormwater Discharges

The requirements in Subpart D apply to stormwater discharges associated with industrial activity from Asphalt Paving and Roofing Materials and Lubricant Manufacturing facilities, as identified by the SIC Codes specified under Sector D in Table C-1 of Appendix C of the permit.

8.D.2 Limitations on Coverage

The following stormwater discharges associated with industrial activity are not authorized by this permit (See also Part 1.1.4)

8.D.2.1 Discharges from petroleum refining facilities to a WOTUS, including those that manufacture asphalt or asphalt products, that are subject to nationally established effluent limitation guidelines found in 40 CFR Part 419 (Petroleum Refining). Discharges to non-WOTUS protected surface waters from petroleum refining facilities are not subject to the effluent limitations found in 40 CFR Part 419 (Petroleum Refining);

8.D.2.2 Discharges from oil recycling facilities which are covered under Sector N (see Part 8.N); and;

8.D.2.3 Discharges associated with fats and oils rendering, which are covered under Sector U (see Part 8.U).

8.D.3 Inactive and Unstaffed Sites – Conditional Exemption from No Exposure Requirements

Permit holders of inactive and unstaffed asphalt batch / bituminous concrete plants (SIC 2951) may qualify for reduced inspections and monitoring provisions of the no exposure provisions of Parts 4.1.3, 4.2.3 and 6.5.4, without certifying “there are no industrial materials or activities exposed to stormwater”. This exemption is conditioned on the following:

- At a minimum, the permittee shall implement the following control measures to meet the no exposure requirements:
 - Materials used in the production of asphalt (i.e., asphaltic concrete oil, diesel fuel, burner fuel, etc.) will be kept in appropriate containers and within containment if applicable;
 - Ensure valves are closed and secured;
 - Good housekeeping measures as outlined in the site’s SWPPP, and in accordance with Part 2.2.1.2.2, such as: ensure materials are properly labeled, clean up trash, debris and other materials;
 - Ensure the site is secured, such as locking entrance gates; and
 - Material stockpiles shall be protected from erosion.
- If circumstances change and the site becomes active and/or staffed, this exemption no longer applies and the permittee shall immediately begin complying with the applicable routine analytical monitoring requirements as if the site were in the first year of permit coverage, including the wet season visual assessment requirements.

- ADEQ retains the authority to revoke this exemption and/or the monitoring waiver where it is determined that the discharge causes, has a reasonable potential to cause, or contributes to an exceedance of an applicable surface water quality standard, including designated uses.

Subject to the two conditions above, if the site is inactive and unstaffed, the permittee is waived from the requirement to conduct wet season visual assessments and routine analytical monitoring. The quarterly routine site inspections are reduced to two routine site inspections each calendar year. These inspections shall be conducted in the opposing wet seasons and at least three months apart. The permittee shall also inspect the site whenever there is a reasonable expectation that severe weather or natural disasters may have damaged control measures or increased discharges.

8.D.4 Sector-Specific Routine Analytical Monitoring Values

Table 8.D-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector D. These parameters apply to both the site’s primary industrial activity and any co-located industrial activities.

Table 8.D-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector D1. Asphalt Paving and Roofing Materials (SIC 2951, 2952)	Total Suspended Solids (TSS)	Reserved
	Total Copper ¹	Hardness-Dependent
	Total Zinc ¹	Hardness-Dependent
	Naphthalene	PSWD ²

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

8.D.5 Effluent Limitations Based on Effluent Limitations Guidelines (See also Part 6.2.2)
(Applicable only to discharges to WOTUS)

NOTE: This section does not apply for discharges to non-WOTUS protected surface waters.

Table 8.D-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

Table 8.D-2 ¹		
Industrial Activity	Parameter	Effluent Limitation
Discharges from asphalt emulsion facilities.	Total Suspended Solids (TSS)	23.0 mg/L, daily maximum 15.0 mg/L, 30-day avg.
	pH	6.0 – 9.0 s.u.
	Oil and Grease	15 mg/L, daily maximum
		10 mg/L, 30-day avg.

¹Monitor annually.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart E – Sector E – Glass, Clay, Cement, Concrete, and Gypsum Products

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.E.1 Covered Stormwater Discharges

The requirements in Subpart E apply to stormwater discharges associated with industrial activity from Glass, Clay, Cement, Concrete, and Gypsum Products facilities, as identified by the SIC Codes specified under Sector E in Table C-1 of Appendix C of the permit.

8.E.2 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.E.2.1 Good Housekeeping Measures (See also Part 2.2.1.2.2)

With good housekeeping, prevent or minimize the discharge of spilled cement, aggregate (including sand or gravel), kiln dust, fly ash, settled dust, or other significant material in stormwater from paved portions of the site that are exposed to stormwater. Where applicable, the permittee shall minimize the presence of these materials, by using measures such as sweeping or vacuuming regularly or other equivalent measures (e.g., wash down the area and collect and/or treat and properly dispose of the washdown water). Indicate in the site's SWPPP the frequency of sweeping, vacuuming or equivalent measures. Determine the frequency based on the amount of industrial activity occurring in the area and the frequency of precipitation, but it must be performed at least once a week if cement, aggregate, kiln dust, fly ash, or settled dust are being handled or processed and may be discharged in stormwater. The permittee shall also prevent the exposure of fine granular material (cement, fly ash, kiln dust, etc.) to stormwater by storing these materials in an appropriate manner, such as in enclosed silos, hoppers, or buildings, or under other covering.

8.E.3 Additional SWPPP Requirements

8.E.3.1 Drainage Area Site Map (See also Part 5.1.2)

Document in the SWPPP the locations of the following, as applicable: baghouse or other dust control device; recycle/sedimentation pond, clarifier, or other device used for the treatment of process wastewater; and the areas that drain to the treatment device.

8.E.3.2 Discharge Testing (See also Part 5.1.3.4)

For facilities producing ready-mix concrete, concrete block, brick, or similar products, include in the non-stormwater discharge certification a description of measures that ensure that process waste waters resulting from washing trucks, mixers, transport buckets, forms, or other equipment are discharged in accordance with AZPDES requirements or are recycled.

8.E.4 Inactive and Unstaffed Sites – Conditional Exemption from No Exposure Requirements

Permit holders of inactive and unstaffed ready-mixed concrete plants (SIC 3273) may qualify for reduced inspections and monitoring provisions of the no exposure provisions of Parts 4.1.3, 4.2.3 and 6.5.4, without certifying "there are no industrial materials or activities exposed to stormwater". This exemption is conditioned on the following:

- At a minimum, the permittee shall implement the following control measures to meet the noexposure requirements:
 - Materials used in the production of concrete (i.e., admixtures, cement and fly ash, diesel fuel, etc.) shall be kept in appropriate containers and within containment if applicable;
 - Ensure valves are closed and secured;
 - Good housekeeping measures as outlined in the site’s SWPPP, and in accordance with Part 2.2.1.2.2, such as: ensure materials are properly labeled, clean up trash, debris and other materials;
 - Ensure the site is secured, such as locking entrance gates; and
 - Material stockpiles shall be protected from erosion.
- If circumstances change and the site becomes active and/or staffed, this exemption no longer applies and the permittee shall immediately begin complying with the applicable routine analytical monitoring requirements as if the site were in the first year of permit coverage, including the wet season visual assessment requirements; and
- ADEQ retains the authority to revoke this exemption and/or the monitoring waiver where it is determined that the discharge causes, has a reasonable potential to cause, or contribute to an exceedance of an applicable surface water quality standard, including designated uses.

Subject to the two conditions above, if the site is inactive and unstaffed, the permittee is waived from the requirement to conduct wet season visual assessments and routine analytical monitoring. The quarterly routine site inspections are reduced to two routine site inspections each calendar year. These inspections shall be conducted in the opposing wet seasons and at least three months apart. The permittee shall also inspect the site whenever there is a reasonable expectation that severe weather or natural disasters may have damaged control measures or increased discharges.

8.E.5 Sector-Specific Routine Analytical Monitoring Values.

Table 8.E-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector E. These parameters and action levels apply to both the site’s primary industrial activity and any co-located industrial activities, which describe the site’s activities.

Table 8.E-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector E1. Clay Product Manufacturers (SIC 3251-3259, 3261-3269)	Total Suspended Solids (TSS)	Reserved mg/L
	pH	6.0 – 9.0 s.u.
	Total Lead ¹	Hardness-Dependent
Subsector E2. Concrete and Gypsum Product Manufacturers (SIC 3271-3275)	pH	6.0 – 9.0 s.u.
	Total Suspended Solids (TSS)	Reserved
	Total Iron	PSWD ²

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

8.E.6 Effluent Limitations Based on Effluent Limitations Guidelines (See also Part 6.2.2.)
(Applicable only to discharges to WOTUS)

NOTE: This section does not apply for discharges to non-WOTUS protected surface waters.

Table 8.E-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

Table 8.E-2 ¹		
Industrial Activity	Parameter	Effluent Limitation
Discharges from material storage piles at cement manufacturing facilities (SIC 3241)	Total Suspended Solids (TSS)	50 mg/L, daily maximum ²
	pH	6.0 – 9.0 s.u. ²

¹ Monitor annually.

² Any untreated overflow from sites designed, constructed, and operated to treat the volume of runoff from materials storage piles which is associated with a 10-year, 24-hour rainfall event shall not be subject to the pH and TSS limitations (40 CFR 411.32(b)).

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart F – Sector F – Primary Metals

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.F.1 Covered Stormwater Discharges

The requirements in Subpart F apply to stormwater discharges associated with industrial activity from Primary Metals facilities, as identified by the SIC Codes specified under Sector F in Table C-1 of Appendix C of the permit.

8.F.2 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.F.2.1 Good Housekeeping Measures (See also Part 2.2.1.2.2)

As part of the site's good housekeeping program, include a cleaning and maintenance program for all impervious areas of the site where particulate matter, dust, or debris may accumulate, especially areas where material loading and unloading, storage, handling, and processing occur; and, where practicable, the paving of areas where vehicle traffic or material storage occur but where vegetative or other stabilization methods are not practicable (institute a cleaning and maintenance program in these areas, too). For unstabilized areas where cleaning and maintenance measures such as sweeping are not practicable, use alternative stormwater management devices such as sediment traps, vegetative buffer strips, filter fabric fence, sediment filtering boom, gravel outlet protection, or other equivalent measures that effectively trap or remove sediment.

8.F.3 Additional SWPPP Requirements

8.F.3.1 Drainage Area Site Map (See also Part 5.1.2)

Identify in the SWPPP where any of the following activities may be exposed to precipitation or surface runoff: storage or disposal of wastes such as spent solvents and baths, sand, slag and dross; liquid storage tanks and drums; processing areas including pollution control equipment (e.g., baghouses); and storage areas of raw material such as coal, coke, scrap, sand, fluxes, refractories, or metal in any form. In addition, indicate where an accumulation of significant amounts of particulate matter could occur from such sources as furnace or oven emissions, losses from coal and coke handling operations, etc., and could result in a discharge of pollutants in stormwater.

8.F.3.2 Inventory of Exposed Material (See also Part 5.1.3.2)

Include in the inventory of materials handled at the site that potentially may be exposed to precipitation or runoff, areas where deposition of particulate matter from process air emissions or losses during material-handling activities are possible.

8.F.4 Additional Inspection Requirements (See also Part 4.1)

As part of conducting the site's quarterly routine site inspections (Part 4.1), address all potential sources of pollutants, including (if applicable) air pollution control equipment (e.g., baghouses, electrostatic precipitators, scrubbers, and cyclones), for any signs of degradation (e.g., leaks, corrosion, or improper operation) that could limit their efficiency and lead to excessive emissions. Monitor air flow at inlets and outlets (or use equivalent measures) to check for leaks (e.g., particulate deposition) or blockage in ducts. Also inspect all process and material handling

equipment (e.g., conveyors, cranes, and vehicles) for leaks, drips, or the potential loss of material; and material storage areas (e.g., piles, bins, or hoppers for storing coke, coal, scrap, or slag, as well as chemicals stored in tanks and drums) for signs of material losses due to wind or stormwater runoff.

8.F.5 Inactive and Unstaffed Sites – Conditional Exemption from No Exposure Requirements

Permit holders of inactive and unstaffed Sector F facilities (SIC 3312 – 3399) may qualify for reduced inspections and monitoring provisions of the no exposure provisions of Parts 4.1.3, 4.2.3 and 6.5.4, without certifying “there are no industrial materials or activities exposed to stormwater”. This exemption is conditioned on the following:

At a minimum, the permittee shall implement the following control measures to meet the no exposure requirements:

- Ensure that all process and material handling equipment (e.g., conveyors, cranes, and vehicles) are safeguarded against leaks, drips, or the potential loss of material; and that material storage areas (e.g., piles, bins, or hoppers for storing coke, coal, scrap, or slag, as well as chemicals stored in tanks and drums) are kept in appropriate containers and within containment if applicable to ensure against material losses due to wind or stormwater runoff;
- Ensure valves are closed and secured;
- Good housekeeping measures as outlined in the site’s SWPPP, and in accordance with Part 2.2.1.2.2, such as: ensure materials are properly labeled, clean up trash, debris and other materials;
- Ensure the site is secured, such as locking entrance gates;
- Material stockpiles shall be protected from erosion and/ or downstream catchments are installed and maintained.

- If circumstances change and the site becomes active and/or staffed, this exemption no longer applies and the permittee shall immediately begin complying with the applicable routine analytical monitoring requirements as if the site were in the first year of permit coverage, including the wet season visual assessment requirements; and
- ADEQ retains the authority to revoke this exemption and/or the monitoring waiver where it is determined that the discharge causes, has a reasonable potential to cause, or contribute to an exceedance of an applicable surface water quality standard, including designated uses.

Subject to the two conditions above, if the site is inactive and unstaffed, the permittee is waived from the requirement to conduct wet season visual assessments and routine analytical monitoring. The quarterly routine site inspections are reduced to two routine site inspections each calendar year. These inspections shall be conducted in the opposing wet seasons and at least three months apart. The permittee shall also inspect the site whenever there is a reasonable expectation that severe weather or natural disasters may have damaged control measures or increased discharges.

8.F.6 Sector-Specific Routine Analytical Monitoring Values. (See also Part 6.)

Table 8.F-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector F. These parameters and action levels apply to both the primary industrial activity and any co-located industrial activities.

Table 8.F-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector F1. Steel Works, Blast Furnaces, and Rolling and Finishing Mills (SIC 3312-3317)	pH	6.0 – 9.0 s.u.
	Total Zinc ¹	Hardness-Dependent
Subsector F2. Iron and Steel Foundries (SIC 3321-3325)	pH	6.0 – 9.0 s.u.
	Total Suspended Solids (TSS)	100 mg/L
	Total and Dissolved Chromium VI	PSWD ²
	Total Copper ¹	Hardness-Dependent
	Total Iron	PSWD ²
	Total Zinc ¹	Hardness-Dependent
Subsector F3. Rolling, Drawing, and Extruding of Nonferrous Metals (SIC 3351-3357)	Total Copper ¹	Hardness-Dependent
	Total Zinc ¹	Hardness-Dependent
Subsector F4. Nonferrous Foundries (SIC 3363-3369)	Total Copper ¹	Hardness-Dependent
	Total Zinc ¹	Hardness-Dependent

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart K – Sector K – Hazardous Waste Treatment, Storage, or Disposal Facilities

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.K.1 Covered Stormwater Discharges

The requirements in Subpart K apply to stormwater discharges associated with industrial activity from Hazardous Waste Treatment, Storage, or Disposal facilities (TSDFs) as identified by the Activity Code specified under Sector K in Table C-1 of Appendix C of the permit.

8.K.2 Industrial Activities Covered by Sector K

This permit authorizes stormwater discharges associated with industrial activity from facilities that treat, store, or dispose of hazardous wastes, including those that are operating under interim status or a permit under subtitle C of RCRA.

Disposal facilities that have been properly closed and capped, and have no significant materials exposed to stormwater are not considered to be industrial activities subject to stormwater permitting and are not required to obtain coverage under this permit, unless the director determines the site is discharging pollutants to a protected surface water.

8.K.3 Limitations on Coverage

8.K.3.1 Prohibition of Non-Stormwater Discharges (See also Part 1.1.4)

The following discharges are not authorized by this permit: leachate, gas collection condensate, drained free liquids, contaminated groundwater, laboratory-derived wastewater, and contact washwater from washing truck and railcar exteriors and surface areas that have come in direct contact with solid waste at the landfill site.

8.K.4 Definitions

8.K.4.1 Contaminated stormwater - stormwater that comes into direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater as defined in Part 8.K.4.4. Some specific areas of a landfill that may produce contaminated stormwater include (but are not limited to): the open face of an active landfill with exposed waste (no cover added); the areas around wastewater treatment operations; trucks, equipment, or machinery that has been in direct contact with the waste; and waste dumping areas.

8.K.4.2 Drained free liquids - aqueous wastes drained from waste containers (e.g., drums) prior to landfilling.

8.K.4.3 Landfill - an area of land or an excavation in which wastes are placed for permanent disposal, but that is not a land application or land treatment unit, surface impoundment, underground injection well, waste pile, salt dome formation, salt bed formation, underground mine, or cave as these terms are defined in 40 CFR 257.2, 258.2, and 260.10.

8.K.4.4 Landfill wastewater - as defined in 40 CFR Part 445 (Landfills Point Source Category), all wastewater associated with, or produced by, landfilling activities except for sanitary wastewater, non-contaminated stormwater, contaminated groundwater, and wastewater from recovery pumping wells. Landfill wastewater includes, but is not limited to, leachate, gas collection

condensate, drained free liquids, laboratory derived wastewater, contaminated stormwater, and contact washwater from washing truck, equipment, and railcar exteriors and surface areas that have come in direct contact with solid waste at the landfill site.

8.K.4.5 Leachate - liquid that has passed through or emerged from solid waste and contains soluble, suspended, or miscible materials removed from such waste.

8.K.4.6 Non-contaminated stormwater - stormwater that does not come into direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater as defined in Part 8.K.4.4. Non-contaminated stormwater includes stormwater that flows off the cap, cover, intermediate cover, daily cover, and/or final cover of the landfill.

8.K.5 Sector-Specific Routine Analytical Monitoring Values

Table 8.K-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector K. These parameters and action levels apply to both the site’s primary industrial activity and any co-located industrial activities.

Table 8.K-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector K1. ALL - Industrial Activity Code “HZ” (Note: permit coverage limited in some States). Routine analytical monitoring parameters and values only applicable to discharges not subject to effluent limitations in 40 CFR Part 445 Subpart A (see below).	Ammonia	PSWD ^{2, 3}
	pH	6.0 – 9.0 s.u.
	TSS	Reserved
	Total Arsenic	PSWD ²
	Total Cadmium ¹	Hardness-Dependent
	Total Cyanide	PSWD ²
	Total Lead ¹	Hardness-Dependent
	Total Mercury	PSWD ²
	Total Selenium	PSWD ²
	Polychlorinated biphenyls (PCBs)	PSWD ²

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

³ The ammonia action level is dependent on pH. See A.A.C. R18-11 Article 1, Appendix A, Table 11.

8.K.6 Effluent Limitations Based on Effluent Limitations Guidelines (See also Part 6.2.2.)
(Applicable only to discharges to WOTUS)

NOTE: This section does not apply for discharges to non-WOTUS protected surface waters.

Table 8.K-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

Table 8.K-2 ¹		
Industrial Activity	Parameter	Effluent Limitation
Discharges from hazardous waste landfills subject to effluent limitations in 40 CFR Part 445 Subpart A (see footnotes on next page).	Biochemical Oxygen Demand (BOD ₅)	220 mg/L, daily maximum
		56 mg/L, monthly avg. maximum
	Total Suspended Solids (TSS)	88 mg/L, daily maximum
		27 mg/L, monthly avg. maximum
	Ammonia	10 mg/L, daily maximum
		4.9 mg/L, monthly avg. maximum
	Alpha Terpineol	0.042 mg/L, daily maximum
		0.019 mg/L, monthly avg. maximum
	Aniline	0.024 mg/L, daily maximum
		0.015 mg/L, monthly avg. maximum
	Benzoic Acid	0.119 mg/L, daily maximum
		0.073 mg/L, monthly avg. maximum
	Naphthalene	0.059 mg/L, daily maximum
		0.022 mg/L, monthly avg. maximum
	p-Cresol	0.024 mg/L, daily maximum
		0.015 mg/L, monthly avg. maximum
	Phenol	0.048 mg/L, daily maximum
		0.029 mg/L, monthly avg. maximum
	Pyridine	0.072 mg/L, daily maximum
		0.025 mg/L, monthly avg. maximum
	Total Arsenic	1.1 mg/L, daily maximum
		0.54 mg/L, monthly avg. maximum
	Total Chromium	1.1 mg/L, daily maximum
		0.46 mg/L, monthly avg. maximum
	Total Zinc	0.535 mg/L, daily maximum
		0.296 mg/L, monthly avg. maximum
	pH	Within the range of 6.0 – 9.0 standard units (s.u.)

Table 8.K-2¹

¹ Monitor annually. As set forth at 40 CFR Part 445 Subpart A, these numeric limitations apply to contaminated stormwater discharges from hazardous waste landfills subject to the provisions of RCRA Subtitle C at 40 CFR Parts 264 (Subpart N) and 265 (Subpart N) except for any of the following facilities:

- (a) Landfills operated in conjunction with other industrial or commercial operations when the landfill receives only wastes generated by the industrial or commercial operation directly associated with the landfill;
- (b) Landfills operated in conjunction with other industrial or commercial operations when the landfill receives wastes generated by the industrial or commercial operation directly associated with the landfill and also receives other wastes, provided that the other wastes received for disposal are generated by a site that is subject to the same provisions in 40 CFR Subchapter N as the industrial or commercial operation or that the other wastes received are of similar nature to the wastes generated by the industrial or commercial operation;
- (c) Landfills operated in conjunction with Centralized Waste Treatment (CWT) facilities subject to 40 CFR Part 437, so long as the CWT site commingles the landfill wastewater with other non-landfill wastewater for discharge. A landfill directly associated with a CWT site is subject to this part if the CWT site discharges landfill wastewater separately from other CWT wastewater or commingles the wastewater from its landfill only with wastewater from other landfills; or
- (d) Landfills operated in conjunction with other industrial or commercial operations when the landfill receives wastes from public service activities, so long as the company owning the landfill does not receive a fee or other remuneration for the disposal service.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart L – Sector L – Landfills, Land Application Sites, and Open Dumps

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.L.1 Covered Stormwater Discharges

The requirements in Subpart L apply to stormwater discharges associated with industrial activity from Landfills and Land Application Sites and Open Dumps as identified by the Activity Code specified under Sector L in Table C-1 of Appendix C of the permit.

8.L.2 Industrial Activities Covered by Sector L

This permit authorizes stormwater discharges for Sector L facilities associated with waste disposal at landfills, land application sites, and open dumps that receive or have received industrial waste, including sites subject to regulation under Subtitle D of RCRA. This permit does not cover discharges from landfills that receive only municipal wastes.

8.L.3 Limitations on Coverage

8.L.3.1 Prohibition of Non-Stormwater Discharges. (See also Part 1.1.4)

The following discharges are not authorized by this permit: leachate, gas collection condensate, drained free liquids, contaminated groundwater, laboratory wastewater, and contact washwater from washing truck and railcar exteriors and surface areas that have come in direct contact with solid waste at the landfill site.

8.L.3.2 Prohibition Stormwater Discharges from Open Dumps

Discharges from open dumps as defined under RCRA are also not authorized under this permit.

8.L.4 Definitions

8.L.4.1 Contaminated Stormwater

Stormwater that comes into direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater. Some areas of a landfill that may produce contaminated stormwater include (but are not limited to) the open face of an active landfill with exposed waste (no cover added); the areas around wastewater treatment operations; trucks, equipment, or machinery that has been in direct contact with the waste; and waste dumping areas.

8.L.4.2 Drained Free Liquids

Aqueous wastes drained from waste containers (e.g., drums) prior to landfilling.

8.L.4.3 Landfill Wastewater - as Defined in 40 CFR Part 445 (Landfills Point Source Category)

All wastewater associated with, or produced by, landfilling activities except for sanitary wastewater, non-contaminated stormwater, contaminated groundwater, and wastewater from recovery pumping wells. Landfill process wastewater includes, but is not limited to, leachate; gas collection condensate; drained free liquids; laboratory-derived wastewater; contaminated stormwater; and contact washwater from washing truck, equipment, and railcar exteriors and surface areas that have come in direct contact with solid waste at the landfill site.

8.L.4.4 Leachate

Liquid that has passed through or emerged from solid waste and contains soluble, suspended, or miscible materials removed from such waste.

8.L.4.5 Non-contaminated stormwater

Stormwater that does not come into direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater. Non-contaminated stormwater includes stormwater that flows off the cap, cover, intermediate cover, daily cover, and/or final cover of the landfill.

8.L.5 Additional Control Measures

8.L.5.1 Preventive Maintenance Program (See also Part 2.2.1.1.3)

As part of the site's preventive maintenance program, maintain the following: all elements of leachate collection and treatment systems, to prevent commingling of leachate with stormwater; the integrity and effectiveness of any intermediate or final cover (including repairing the cover as necessary), to minimize the effects of settlement, sinking, and erosion.

8.L.5.2 Erosion and Sedimentation Control

(See also Part 2.2.1.2.5) Provide temporary stabilization (e.g., temporary seeding, mulching, and placing geotextiles on the inactive portions of stockpiles) for the following: materials stockpiled for daily, intermediate, and final cover; inactive areas of the landfill or open dump; landfills or open dump areas that have installed final covers but where vegetation has yet to establish itself; and land application sites where waste application has been completed but final vegetation has not yet been established.

8.L.5.3 Unauthorized Discharge Test Certification

The discharge test and certification must also be conducted for the presence of leachate and vehicle washwater.

8.L.6 Additional SWPPP Requirements

8.L.6.1 Drainage Area Site Map

Document in the SWPPP where any of the following may be exposed to precipitation or surface runoff: active and closed landfill cells or trenches, active and closed land application areas, locations where open dumping is occurring or has occurred, locations of any known leachate springs or other areas where uncontrolled leachate may commingle with runoff, and leachate collection and handling systems.

8.L.6.2 Summary of Potential Pollutant Sources

Document in the SWPPP the following sources and activities that have potential pollutants associated with them: fertilizer, herbicide, and pesticide application; earth and soil moving; waste hauling and loading or unloading; outdoor storage of significant materials, including daily, interim, and final cover material stockpiles as well as temporary waste storage areas; exposure of active and inactive landfill and land application areas; uncontrolled leachate flows; and failure or leaks from leachate collection and treatment systems.

8.L.7 Additional Inspection Requirements (See also Part 4)

8.L.7.1 Inspections of Active Sites

Inspect operating landfills, open dumps, and land application sites at least once every month. At a minimum, the inspection shall include the following: (a) areas of landfills that have not yet been finally stabilized; (b) active land application areas; (c) areas used for storage of material and wastes that are exposed to precipitation; (d) landfill (or open dump) stabilization and structural control measures; (e) leachate collection and treatment systems; and (f) locations where equipment and waste trucks enter and exit the site. Ensure that sediment and erosion control measures are operating properly.

8.L.7.2 Inspection Schedule for Sites within 1/4 mile of Special Waters

If any discharge point from the site is within 1/4 mile of a special water, the permittee shall inspect the discharge point at least twice per month with at least 7 calendar days between inspections. In addition, the permittee shall visually observe stormwater discharges at all discharge locations within one business day of the end of each measurable storm event.

8.L.7.3 Inspections of Inactive Sites

Inspect inactive landfills, open dumps, and land application sites at least quarterly. Qualified personnel must inspect landfill (or open dump) stabilization and structural erosion control measures, leachate collection and treatment systems, and all closed land application areas.

8.L.8 Additional Post-Authorization Documentation Requirements

8.L.8.1 Recordkeeping and Internal Reporting

Keep records with the SWPPP of the types of wastes disposed of in each cell or trench of a landfill or open dump. For land application sites, track the types and quantities of wastes applied in specific areas.

8.L.9 Sector-Specific Routine Analytical Monitoring Values

Table 8.L-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector L. These parameters and action levels apply to both the site's primary industrial activity and any co-located industrial activities, which describe the site's activities.

Table 8.L-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level¹
Subsector L1. All Landfill, Land Application Sites and Open Dumps (Industrial Activity Code "LF")	Total Suspended Solids (TSS)	Reserved
Subsector L2. All Landfill, Land Application Sites and Open Dumps, except Municipal Solid Waste Landfill (MSWLF) Areas Closed in Accordance with 40 CFR 258.60 (Industrial Activity Code "LF")	Total Suspended Solids (TSS)	Reserved
	Total Iron	PSWD ²

¹ Routine analytical monitoring required only for discharges not subject to effluent limitations in 40 CFR Part 445 Subpart B (see Table 8.L-2 below).

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

8.L.10. Effluent Limitations Based on Effluent Limitations Guidelines (See also Part 6.2.2)
 (Applicable only to discharges to WOTUS)

NOTE: This section does not apply for discharges to non-WOTUS protected surface waters.

Table 8.L-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

Table 8.L-2 ¹		
Industrial Activity	Parameter	Effluent Limitation
Discharges from non-hazardous waste landfills subject to effluent limitations in 40 CFR Part 445 Subpart B (see footnotes on next page).	Biochemical Oxygen Demand (BOD ₅)	140 mg/L, daily maximum
		37 mg/L, monthly avg. maximum
	Total Suspended Solids (TSS)	88 mg/L, daily maximum
		27 mg/L, monthly avg. maximum
	Ammonia	10 mg/L, daily maximum
		4.9 mg/L, monthly avg. maximum
	Alpha Terpineol	0.033 mg/L, daily maximum
		0.016 mg/L monthly avg. maximum
	Benzoic Acid	0.12 mg/L, daily maximum
		0.071 mg/L, monthly avg. maximum
	p-Cresol	0.025 mg/L, daily maximum
		0.014 mg/L, monthly avg. maximum
	Phenol	0.026 mg/L, daily maximum
		0.015 mg/L, monthly avg. maximum
Total Zinc	0.20 mg/L, daily maximum	
	0.11 mg/L, monthly avg. maximum	
pH	Within the range of 6.0 – 9.0 standard pH units (s.u).	

Table 8.L-2 ¹		
Industrial Activity	Parameter	Effluent Limitation

¹ Monitor annually. As set forth at 40 CFR Part 445 Subpart B, these numeric limitations apply to contaminated stormwater discharges from MSWLFs that have not been closed in accordance with 40 CFR 258.60, and to contaminated stormwater discharges from those landfills that are subject to the provisions of 40 CFR Part 257 except for discharges from any of the following facilities:

- (a) Landfills operated in conjunction with other industrial or commercial operations, when the landfill receives only wastes generated by the industrial or commercial operation directly associated with the landfill;
- (b) Landfills operated in conjunction with other industrial or commercial operations, when the landfill receives wastes generated by the industrial or commercial operation directly associated with the landfill and also receives other wastes, provided that the other wastes received for disposal are generated by a site that is subject to the same provisions in 40 CFR Subchapter N as the industrial or commercial operation, or that the other wastes received are of similar nature to the wastes generated by the industrial or commercial operation;
- (c) Landfills operated in conjunction with CWT facilities subject to 40 CFR Part 437, so long as the CWT site commingles the landfill wastewater with other non-landfill wastewater for discharge. A landfill directly associated with a CWT site is subject to this part if the CWT site discharges landfill wastewater separately from other CWT wastewater or commingles the wastewater from its landfill only with wastewater from other landfills; or
- (d) Landfills operated in conjunction with other industrial or commercial operations when the landfill receives wastes from public service activities, so long as the company owning the landfill does not receive a fee or other remuneration for the disposal service.

8.L.11 Sector L Exemption from MSGP - Sector L Closure Certification

The Sector L Closure Certification Form is available on ADEQ’s website for a closed landfill, land application site or open dump not covered under the AZPDES Multi-Sector General Permit. The Form is filled out instead of filing an NOI and NOT for a closed Sector L facilities that never received coverage under the 2000 MSGP, 2010 MSGP, 2019 MSGP, or 2024 MSGP and requires a certification statement. An inactive, closed or capped landfill, land application site or open dump ceases being an industrial activity and is no longer subject to stormwater permitting requirements when the land use has been altered such that there is no exposure of significant materials to stormwater at the site. This could be accomplished in such ways as installing a surface cover that prevents stormwater from coming into contact with waste materials and discharging to a protected surface water (such as a parking lot or shopping center), or by closing and capping the landfill in accordance with RCRA Subtitle D requirements in 40 CFR Part 258.

Sector L facilities that have previously submitted the Sector L Closure Certification form are not required to resubmit under this permit term.

Part 8 – Sector-Specific Requirements for Industrial Activity**Subpart M – Sector M – Automobile Salvage Yards**

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.M.1 Covered Stormwater Discharges

The requirements in Subpart M apply to stormwater discharges associated with industrial activity from Automobile Salvage Yards as identified by the SIC Code specified under Sector M in Table C-1 of Appendix C of this permit.

8.M.2 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)**8.M.2.1 Spill and Leak Prevention Procedures (See also Part 2.2.1.2.4)**

Drain vehicles intended to be dismantled of all fluids upon arrival at the site (or as soon thereafter as feasible), or employ some other equivalent means (such as storage indoors until drained) to prevent spills and leaks.

8.M.2.2 Employee Training (See also Part 2.2.1.2.9)

If the site handles these materials, the employee training program shall address the proper handling (collection, storage, and disposal) of oil, used mineral spirits, antifreeze, mercury switches, and solvents.

8.M.2.3 Management of Runoff (See also Part 2.2.12.1.6)

The permittee shall implement effective controls to manage run-off. Consider the following or other equivalent practices: installation of berms or drainage ditches on the property line (to help prevent run-on from neighboring properties); berms for uncovered outdoor storage of oily parts, engine blocks, and above-ground liquid storage; installation of detention ponds; and installation of filtering devices and oil and water separators.

8.M.3 Additional SWPPP Requirements**8.M.3.1 Drainage Area Site Map**

(See also Part 5.1.2) Identify locations used for dismantling, storage, and maintenance of used motor vehicle parts. Also identify where any of the following may be exposed to precipitation or surface runoff: dismantling areas, parts (e.g., engine blocks, tires, hub caps, batteries, hoods, mufflers) storage areas, and liquid storage tanks and drums for fuel and other fluids.

8.M.3.2 Potential Pollutant Sources (See also Part 5.1.3)

Assess the potential for the following to contribute pollutants to stormwater discharges: vehicle storage areas, dismantling areas, parts storage areas (e.g., engine blocks, tires, hub caps, batteries, hoods, mufflers), and fueling stations.

8.M.4 Additional Inspection Requirements (See also Part 4.1)

Immediately (or as soon thereafter as feasible) inspect vehicles arriving at the site for leaks. Inspect quarterly for signs of leakage all equipment containing oily parts, hydraulic fluids, any other types of fluids, or mercury switches. Also, inspect quarterly for signs of leakage all vessels

and areas where hazardous materials and general automotive fluids are stored, including, but not limited to, mercury switches, brake fluid, transmission fluid, radiator water, and antifreeze.

8.M.5 Sector-Specific Routine Analytical Monitoring Values (See also Part 6 of the permit.)

Table 8.M-1 identifies routine analytical monitoring parameters and action levels that apply to Sector M. These parameters and action levels apply to both the primary industrial activity and any co-located industrial activities.

Table 8.M-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector M1. Automobile Salvage Yards (SIC 5015)	Total Suspended Solids (TSS)	100 mg/L
	Total Cadmium ¹	Hardness-Dependent
	Total Copper ¹	Hardness-Dependent
	Total Iron	PSWD ²
	Total Lead ¹	Hardness-Dependent

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart N – Sector N – Scrap Recycling and Waste Recycling Facilities

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.N.1 Covered Stormwater Discharges

The requirements in Subpart N apply to stormwater discharges associated with industrial activity from Scrap Recycling and Waste Recycling facilities as identified by the SIC Code specified under Sector N in Table C-1 of Appendix C of the permit.

8.N.2 Limitation on Coverage

Separate permit requirements have been established for recycling facilities that receive, process and do wholesale distribution of only source-separated recyclable materials primarily from non-industrial and residential sources (i.e., common consumer products including paper, newspaper, glass, cardboard, plastic containers, and aluminum and tin cans). This includes recycling facilities commonly referred to as material recovery facilities (MRF). See Part 8.N.3.3.

8.N.2.1 Prohibition of Non-Stormwater Discharges (See also Part 1.1.4)

Non-stormwater discharges from turnings containment areas are not authorized by this permit (see also Part 8.N.3.2.3). Discharges from containment areas in the absence of a storm event are prohibited unless covered by a separate AZPDES permit.

8.N.3 Additional Control Measures

8.N.3.1 Scrap and Waste Recycling Facilities (Non-Source Separated, Non-liquid Recyclable Materials)

The requirements in this section pertain to facilities that receive, process, and conduct wholesale distribution of non-source separated non-liquid recyclable wastes (e.g., ferrous and nonferrous metals, plastics, glass, cardboard, and paper). These facilities may receive both non-recyclable and recyclable materials. This section does not apply to facilities that accept recyclables only from primarily non-industrial and residential sources.

8.N.3.1.1 Inbound Recyclable and Waste Material Control Program

Minimize the chance of accepting materials that could be significant sources of pollutants by conducting inspections of inbound recyclables and waste materials. Following are some control measure options:

- a) Provide information and education to suppliers of scrap and recyclable waste materials on draining and properly disposing of residual fluids (e.g., from vehicles and equipment engines, radiators and transmissions, oil filled transformers, and individual containers or drums) and removal of mercury switches from vehicles before delivery to the site;
- b) Establish procedures to minimize the potential of any residual fluids from coming into contact with precipitation or runoff;
- c) Establish procedures for accepting scrap lead-acid batteries (additional requirements for the handling, storage, and disposal or recycling of batteries are contained in the scrap lead-acid battery program provisions in Part 8.N.3.2.6);

- d) Provide training targeted for those personnel engaged in the inspection and acceptance of inbound recyclable materials; and
- e) Establish procedures to ensure that liquid wastes, including used oil, are stored in materially compatible and non-leaking containers and are disposed of or recycled in accordance with the Resource Conservation and Recovery Act (RCRA).

8.N.3.1.2 Scrap and Waste Material Stockpiles and Storage (Outdoor)

Minimize contact of stormwater runoff with stockpiled materials, processed materials, and non-recyclable wastes. Following are some control measure options:

- a) permanent or semi-permanent covers;
- b) sediment traps, vegetated swales and strips, catch basin filters, and sand filters to facilitate settling or filtering of pollutants;
- c) dikes, berms, containment trenches, culverts, and surface grading to divert runoff from storage areas;
- d) silt fencing; and
- e) oil and water separators, sumps, and dry absorbents for areas where potential sources of residual fluids are stockpiled (e.g., automobile engine storage areas).

8.N.3.1.3 Stockpiling of Turnings Exposed to Cutting Fluids (Outdoor Storage)

Minimize contact of surface runoff with residual cutting fluids by:

- a) storing all turnings exposed to cutting fluids under some form of permanent or semi-permanent cover, or
- b) establishing dedicated containment areas for all turnings that have been exposed to cutting fluids. Any containment areas must be constructed of concrete, asphalt, or other equivalent types of impermeable material and include a barrier (e.g., berms, curbing, elevated pads) to prevent contact with stormwater run-on. Stormwater runoff from these areas can be discharged, provided that any runoff is first collected and treated by an oil and water separator or its equivalent. The permittee shall regularly maintain the oil and water separator (or its equivalent) and properly dispose of or recycle collected residual fluids.

8.N.3.1.4 Scrap and Waste Material Stockpiles and Storage (Covered or Indoor Storage)

Minimize contact of residual liquids and particulate matter from materials stored indoors or under cover with surface runoff. Following are some control measure options (list not exclusive):

- a) Good housekeeping measures, including the use of dry absorbents or wet vacuuming to contain, dispose of, or recycle residual liquids originating from recyclable containers, or mercury spill kits for spills from storage of mercury switches; and
- b) Not allowing washwater from tipping floors or other processing areas to discharge to the storm sewer system; and disconnecting or sealing off all floor drains connected to the storm sewer system.

8.N.3.1.5 Scrap and Recyclable Waste Processing Areas

Minimize surface runoff from coming in contact with scrap processing equipment. The permittee shall determine whether operations that generate visible amounts of particulate residue (e.g., shredding) and residual fluids come in contact with runoff. Such contact shall be minimized or prevented through good housekeeping, preventive maintenance, etc. The permittee shall:

- a) Regularly inspect equipment for spills or leaks and malfunctioning, worn, or corroded parts or equipment;
- b) Establish a preventive maintenance program for processing equipment; and
- c) Use dry-absorbents or other cleanup practices to collect and dispose of or recycle spilled or leaking fluids or use mercury spill kits for spills from storage of mercury switches.

The permittee shall also implement one or more of the following (or other equivalent measures):

- a) On unattended hydraulic reservoirs over 150 gallons in capacity, install protection devices such as low-level alarms or equivalent devices, or secondary containment that can hold the entire volume of the reservoir;
- b) Install containment or diversion structures such as dikes, berms, culverts, trenches, elevated concrete pads, and grading to minimize contact of stormwater runoff with outdoor processing equipment or stored materials;
- c) Oil and water separators or sumps;
- d) Permanent or semi-permanent covers in processing areas where there are residual fluids and grease;
- e) Retention or detention ponds or basins; sediment traps, and vegetated swales or strips (for pollutant settling and filtration); and
- f) Catch basin filters or sand filters.

8.N.3.1.6 Scrap Lead-Acid Battery Program

Properly handle, store, and dispose of scrap lead-acid batteries. The permittee shall implement one or more of the following control measure options (or other equivalent measures):

- a) Segregate scrap lead-acid batteries from other scrap materials;
- b) Properly handle, store, and dispose of cracked or broken batteries;
- c) Collect and dispose of leaking lead-acid battery fluid;
- d) Minimize or eliminate (if possible) exposure of scrap lead-acid batteries to precipitation or runoff.

Also, employee training for the management of scrap batteries shall be provided.

8.N.3.1.7 Spill Prevention and Response Procedures (See also Part 2.2.1.2.4)

Install alarms and/or pump shutoff systems on outdoor equipment with hydraulic reservoirs exceeding 150 gallons in the event of a line break. Alternatively, a secondary containment system capable of holding the entire contents of the reservoir plus room for precipitation can be used. Use a mercury spill kit for any release of mercury from switches, anti-lock brake systems, and switch storage areas.

8.N.3.1.8 Supplier Notification Program

As appropriate, notify major suppliers which scrap materials will not be accepted at the site or will be accepted only under certain conditions.

8.N.3.2 Waste Recycling Facilities (Liquid Recyclable Materials)

8.N.3.2.1 Waste Material Storage (Indoor)

Minimize or eliminate contact between residual liquids from waste materials stored indoors and from surface runoff. The site SWPPP may refer to applicable portions of other existing plans, such as Spill Prevention, Control, and Countermeasure (SPCC)

plans required under 40 CFR Part 112. The permittee shall implement:

- a. Procedures for safe material handling (including labeling and marking); and
- b. Cleanup of spills and leaks with dry absorbent materials, or a wet vacuum system.

The permittee shall implement one or both of the following control measure options (or other equivalent measures):

- a) Install appropriate containment structures (trenching, curbing, gutters, etc.); and
- b) A drainage system, including appurtenances (e.g., pumps or ejectors, manually operated valves), to handle discharges from diked or bermed areas. Drainage shall be discharged to an appropriate treatment site or sanitary sewer system, or otherwisedisposed of properly. These discharges may require coverage under a separate AZPDES wastewater permit or industrial user permit under the pretreatment program.

8.N.3.2.2 Waste Material Storage (Outdoor)

Minimize contact between stored residual liquids and precipitation or runoff. The SWPPP may refer to applicable portions of other existing plans, such as SPCC plans required under 40 CFR Part 112. Discharges of precipitation from containment areas containing used oil shall be in accordance with applicable sections of 40 CFR Part 112. The permittee shall implement one or more of the following control measure options (or other equivalent measures) to minimize contaminants in stormwater: (a) appropriate containment structures (e.g., dikes, berms, curbing, pits) to store the volume of the largest tank, with sufficient extra capacity for precipitation; (b) drainage control and other diversionary structures; (c) corrosion protection and/or leak detection systems for storage tanks; and (d) dry-absorbent materials or a wet vacuum system to collect spills.

8.N.3.2.3 Trucks and Rail Car Waste Transfer Areas

Minimize pollutants in stormwater discharges from truck and rail car loading and unloading areas. Include measures to clean up minor spills and leaks resulting from the transfer of liquid wastes. To minimize discharges of pollutants in stormwater from truck and rail car waste transfer areas, implement control measures such as the following, where determined to be feasible (list not exclusive): containment and diversionary structures to minimize contact with precipitation or runoff; and dry clean-up methods, wet vacuuming, roof coverings, and/or runoff controls.

8.N.3.3 Recycling Facilities (Source-Separated Materials)

The following identifies considerations for facilities that receive only source-separated recyclables, primarily from non-industrial and residential sources.

8.N.3.3.1 Inbound Recyclable Material Control

Minimize the chance of accepting non-recyclables (e.g., hazardous materials) that could be a significant source of pollutants by conducting inspections of inbound materials. Implement one or more of the following control measures (or other equivalent measures):

- a) Provide information and education measures to inform suppliers of recyclables about acceptable and non-acceptable materials;
- b) Train drivers responsible for pickup of recycled material;
- c) Clearly mark public drop-off containers regarding which materials can be accepted; and
- d) Reject non-recyclable wastes or household hazardous wastes at the source.

The permittee shall also establish procedures for handling and disposal of non-recyclable material.

8.N.3.3.2 Outdoor Storage

Implement effective control measures to minimize exposure of recyclables to precipitation and runoff. Use good housekeeping measures to prevent accumulation of particulate matter and fluids, particularly in high traffic areas. Implement one or more of the following control measures (or other equivalent measures):

- a) Provide totally enclosed drop-off containers for the public;
- b) Install a sump and pump with each container pit and treat or discharge collected fluids to a sanitary sewer system;
- c) Provide dikes and curbs for secondary containment (e.g., around bales of recyclable waste paper);
- d) Divert surface water runoff away from outside material storage areas;
- e) Provide covers over containment bins, dumpsters, and roll-off boxes, and
- f) Storing the equivalent of one day's volume of recyclable material indoors.

8.N.3.3.3 Indoor Storage and Material Processing

Implement effective control measures to minimize the release of pollutants from indoor storage and processing areas. The permittee shall:

- a) Schedule routine good housekeeping measures for all storage and processing areas;
- b) Prohibit tipping floor washwater from draining to the surface soils or to the storm sewer system; and
- c) Provide employee training on pollution prevention practices.

8.N.3.3.4 Vehicle and Equipment Maintenance

Implement effective control measures for areas where vehicle and equipment maintenance occur outdoors. The permittee shall implement one or more of the following control measure options (or other equivalent measures):

- a) Prohibit vehicle and equipment washwater from discharging to surface soils or the storm sewer system;
- b) Minimize or eliminate outdoor maintenance areas whenever possible;
- c) Avoid topping off fuel tanks;
- d) Divert runoff from fueling areas; and
- e) Store lubricants and hydraulic fluids indoors.

The permittee shall also establish spill prevention and clean-up procedures for fueling areas, and provide employee training on proper handling and storage of hydraulic fluids and lubricants.

8.N.4 Additional SWPPP Requirements

8.N.4.1 Drainage Area Site Map (See also Part 5.1.2)

Document in the site's SWPPP the locations of any of the following activities or sources that may be exposed to precipitation or surface runoff: scrap and waste material storage, outdoor scrap and waste processing equipment; and containment areas for turnings exposed to cutting fluids.

8.N.4.2 Maintenance Schedules/Procedures for Collection, Handling, and Disposal or Recycling of Residual Fluids at Scrap and Waste Recycling Facilities.

For any site subject to Part 8.N.3.1.3, the SWPPP must identify any applicable maintenance schedule and the procedures to collect, handle, and dispose of or recycle residual fluids.

8.N.5 Additional Inspection Requirements

8.N.5.1 Inspections for Waste Recycling Facilities

The inspections must be performed quarterly, pursuant to Part 4.1, and include, at a minimum, all areas where waste is generated, received, stored, treated, or disposed of and that are exposed to either precipitation or stormwater runoff.

8.N.6 Sector-Specific Routine Analytical Monitoring Values. (See also Part 6.)

Table 8.N-1 identifies routine analytical monitoring parameters and action levels that apply to Sector N. These parameters and action levels apply to both the primary industrial activity and any co-located industrial activities.

Table 8.N-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector N1. Scrap Recycling and Waste Recycling Facilities except those only receiving source-separate recyclable materials primarily from non-industrial and residential sources (SIC 5093)	Total Suspended Solids (TSS)	100 mg/L
	Total Cadmium ¹	Hardness-Dependent
	Total Recoverable Copper ¹	Hardness-Dependent
	Total Recoverable Iron	PSWD ²
	Total Recoverable Lead ¹	Hardness-Dependent
	Total Recoverable Zinc ¹	Hardness-Dependent

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart O – Sector O – Steam Electric Generating Facilities

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.0.1 Covered Stormwater Discharges

The requirements in Subpart O apply to stormwater discharges associated with industrial activity from Steam Electric Power Generating Facilities as identified by the Activity Code specified under Sector O in Table C-1 of Appendix C.

8.0.2 Industrial Activities Covered by Sector O

This permit authorizes stormwater discharges from the following industrial activities at Sector O facilities:

- a) Steam electric power generation using coal, natural gas, oil, nuclear energy, etc., to produce a steam source, including coal handling areas (does not include geothermal areas);
- b) Coal pile runoff, including effluent limitations established by 40 CFR Part 423 (Applicable only to discharges to WOTUS); and
- c) Dual fuel facilities that could employ a steam boiler.

8.0.3 Limitations on Coverage

8.0.3.1 Prohibition of Non-Stormwater Discharges

Non-stormwater discharges to WOTUS subject to effluent limitations guidelines are not authorized by this permit. Discharges to non-WOTUS protected surface waters from Steam Electric Generating Facilities are not subject to the effluent limitations.

8.0.3.2 Prohibition of Stormwater Discharges

Stormwater discharges from the following are not covered by this permit:

- a) Ancillary facilities (e.g., fleet centers and substations) that are not contiguous to a steam electric power generating site;
- b) Gas turbine facilities (providing the site is not a dual-fuel site that includes a steam boiler), and combined-cycle facilities where no supplemental fuel oil is burned (and the site is not a dual-fuel site that includes a steam boiler); and
- c) Cogeneration (combined heat and power) facilities utilizing a gas turbine.

8.0.4 Additional Control Measures (See also Part 2.2.1.)

The following good housekeeping measures are required in addition to Part 2.2.1.2.2:

8.0.4.1 Fugitive Dust Emissions

Minimize fugitive dust emissions from coal handling areas. The permittee shall implement effective controls to minimize the tracking of coal dust offsite, such as installing specially designed tires or washing vehicles in a designated area before they leave the site and controlling the wash water.

8.O.4.2 Delivery Vehicles

The permittee shall implement effective controls to minimize contamination of stormwater runoff from delivery vehicles arriving at the plant site such as procedures to inspect delivery vehicles arriving at the plant site and ensure overall integrity of the body or container and procedures to deal with leakage or spillage from vehicles or containers.

8.O.4.3 Fuel Oil Unloading Areas

The permittee shall implement effective controls to minimize contamination of precipitation or surface runoff from fuel oil unloading areas, such as using containment curbs in unloading areas, having personnel familiar with spill prevention and response procedures present during deliveries to ensure that any leaks or spills are immediately contained and cleaned up, and using spill and overflow protection devices (e.g., drip pans, drip diapers, or other containment devices placed beneath fuel oil connectors to contain potential spillage during deliveries or from leaks at the connectors).

8.O.4.4 Chemical Loading and Unloading

The permittee shall implement effective controls to minimize contamination of precipitation or surface runoff from chemical loading and unloading areas, such as: using containment curbs at chemical loading and unloading areas to contain spills, having personnel familiar with spill prevention and response procedures present during deliveries to ensure that any leaks or spills are immediately contained and cleaned up, loading and unloading in covered areas and storing chemicals indoors.

8.O.4.5 Miscellaneous Loading and Unloading Areas

The permittee shall implement effective controls to minimize contamination of precipitation or surface runoff from loading and unloading areas, such as: covering the loading area; grading, berming, or curbing around the loading area to divert run-on; locating the loading and unloading equipment and vehicles so that leaks are contained in existing containment and flow diversion systems; or equivalent procedures.

8.O.4.6 Liquid Storage Tanks

The permittee shall implement effective controls to minimize contamination of surface runoff from above-ground liquid storage tanks, such as using protective guards around tanks, containment curbs, spill and overflow protection, dry cleanup methods, or equivalent measures.

8.O.4.7 Large Bulk Fuel Storage Tanks

The permittee shall implement effective controls to minimize contamination of surface runoff from large bulk fuel storage tanks including the use of containment berms or other equivalent measures. The permittee shall also comply with applicable State and Federal laws, including SPCC Plan requirements.

8.O.4.8 Spill Reduction Measures

The permittee shall implement effective controls to minimize the potential for an oil or chemical spill. These shall be detailed in the SWPPP or the permittee may reference the appropriate part of the site's SPCC plan if applicable. As part of the routine site inspection the permittee shall inspect the structural integrity of all above-ground tanks, pipelines, pumps, and related equipment that may be exposed to stormwater, and make any necessary repairs immediately.

8.O.4.9 Oil-Bearing Equipment in Switchyards

The permittee shall implement effective controls to minimize contamination of surface runoff from oil-bearing equipment in switchyard areas, such as the use of level grades and gravel surfaces to retard flows and limit the spread of spills, or collecting runoff in perimeter ditches.

8.O.4.10 Residue-Hauling Vehicles

The permittee shall inspect all residue-hauling vehicles for proper load covering, adequate gate sealing, and overall integrity of the container body. Repair vehicles without load covering or adequate gate sealing, or with leaking containers or beds.

8.O.4.11 Ash Loading Areas

The permittee shall implement effective controls to reduce or control the tracking of ash and residue from ash loading areas. Clear the ash building floor and immediately adjacent roadways of spillage, debris, and excess water before departure of each loaded vehicle.

8.O.4.12 Areas Adjacent to Disposal Ponds or Landfills

The permittee shall implement effective controls to minimize contamination of surface runoff from areas adjacent to disposal ponds or landfills, reduce ash residue that may be tracked on to access roads traveled by residue handling vehicles, and reduce ash residue on exit roads leading into and out of residue handling areas.

8.O.4.13 Landfills, Scrap yards, Surface Impoundments, Open Dumps, General Refuse Sites

The permittee shall implement effective controls to minimize the potential for contamination of runoff from these areas.

8.O.5 Additional SWPPP Requirements

8.O.5.1 Drainage Area Site Map (See also Part 5.1.2)

Document in the site's SWPPP the locations of any of the following activities or sources that may be exposed to precipitation or surface runoff: storage tanks, scrap yards, and general refuse areas; short- and long-term storage of general materials (including but not limited to supplies, construction materials, paint equipment, oils, fuels, used and unused solvents, cleaning materials, paint, water treatment chemicals, fertilizer, and pesticides); landfills and construction sites; and stock pile areas (e.g., coal or limestone piles).

8.O.5.2 Documentation of Good Housekeeping Measures

The permittee shall document in the site's SWPPP the good housekeeping measures implemented to meet the effluent limits in Part 8.O.4.

8.O.6 Additional Inspection Requirements

8.O.6.1 Site Compliance Inspection

As part of the site's inspection, inspect the following areas monthly: coal handling areas, loading or unloading areas, switchyards, fueling areas, bulk storage areas, ash handling areas, areas adjacent to disposal ponds and landfills, maintenance areas, liquid storage tanks, and long term and short term material storage areas.

8.0.7 Sector-Specific Routine Analytical Monitoring Values

Table 8.0-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector O. These parameters and action levels apply to both the site’s primary industrial activity and any co-located industrial activities, which describe the site’s activities.

Table 8.0-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector O1. Steam Electric Generating Facilities (Industrial Activity Code “SE”)	pH	6.0 – 9.0 s.u
	Total Iron	PSWD ¹

¹ PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

8.0.8 Effluent Limitations Based on Effluent Limitations Guidelines (See also Part 6.2.2.)
(Applicable only to discharges to WOTUS)

NOTE: This section does not apply for discharges to non-WOTUS protected surface waters.

Table 8.0-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other wastestreams that may be covered under this permit.

Table 8.0-2 ¹		
Industrial Activity	Parameter	Effluent Limitation
Discharges from coal storage piles at Steam Electric Generating Facilities	TSS	50 mg/L ²
	pH	6.0 – 9.0 s.u. max

¹ Monitor annually.

² If the site is designed, constructed, and operated to treat the volume of coal pile runoff that is associated with a 10-year, 24-hour rainfall event, any untreated overflow of coal pile runoff from the treatment unit is not subject to the 50 mg/L limitation for total suspended solids.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart P – Sector P – Land Transportation and Warehousing

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.P.1 Covered Stormwater Discharges

The requirements in Subpart P apply to stormwater discharges associated with industrial activity from Land Transportation and Warehousing facilities as identified by the SIC Codes specified under Sector P in Table C-1 of Appendix C of the permit.

8.P.2 Limitation on Coverage

8.P.2.1 Prohibited Discharges (see also Parts 1.1.4 and 8.P.4.4)

This permit does not authorize the discharge of vehicle/equipment/surface washwater, including tank cleaning operations. Such discharges must be legally disposed in a permitted site, discharged to a sanitary sewer in accordance with applicable industrial pretreatment requirements, or recycled on-site.

8.P.3 Additional Control Measures

8.P.3.1 Good Housekeeping Measures (See also Part 2.2.1.2.2)

In addition to the Good Housekeeping requirements in Part 2.2.1.2, the permittee shall perform the following:

8.P.3.1.1 Vehicle and Equipment Storage Areas

Minimize the potential for stormwater exposure to leaky or leak-prone vehicles/equipment awaiting maintenance. Implement one or more of the following (or other equivalent measures): use of drip pans under vehicles/equipment; indoor storage of vehicles and equipment; install berms or dikes; use of absorbents; install roofs or cover storage areas; and clean pavement surfaces to remove oil and grease.

8.P.3.1.2 Fueling Areas

Minimize contamination of stormwater runoff from fueling areas. Implement one or more of the following (or other equivalent measures): Covering the fueling area; using spill/overflow protection and cleanup equipment; minimizing stormwater run-on/runoff to the fueling area; using dry cleanup methods; and treating and/or recycling collected stormwater runoff.

8.P.3.1.3 Material Storage Areas

Maintain all material storage vessels (e.g., for used oil/oil filters, spent solvents, paint wastes, hydraulic fluids) to prevent contamination of stormwater and plainly label them (e.g., "Used Oil," "Spent Solvents," etc.). Implement one or more of the following (or other equivalent measures): storing the materials indoors; installing berms/dikes around the areas; minimizing runoff of stormwater to the areas; using dry cleanup methods; and treating and/or recycling collected stormwater runoff.

8.P.3.1.4 Vehicle and Equipment Cleaning Areas

Minimize contamination of stormwater runoff from all areas used for vehicle/equipment cleaning. Implement one or more of the following (or other equivalent measures): performing all cleaning operations indoors; covering the cleaning operation, ensuring that all washwater drains to a proper collection system (i.e., not the stormwater drainage system); treating and/or recycling collected washwater, or other equivalent measures.

8.P.3.1.5 Vehicle and Equipment Maintenance Areas

Minimize contamination of stormwater runoff from all areas used for vehicle/equipment maintenance. Implement one or more of the following where it is determine to be feasible (or other equivalent measures): performing maintenance activities indoors; using drip pans; inventory of materials used in the shop; draining all parts of fluid prior to disposal; prohibiting wet clean up practices if these practices would result in the discharge of pollutants to stormwater drainage systems; using dry cleanup methods; treating and/or recycling collected stormwater runoff, minimizing run on/runoff of stormwater to maintenance areas.

8.P.3.1.6 Locomotive Sanding (Loading Sand for Traction) Areas

Implement one or more of the following (or other equivalent measures): covering sanding areas; minimizing stormwater run on/runoff; or appropriate sediment removal practices to minimize the offsite transport of sanding material by stormwater.

8.P.3.2 Employee Training

Train personnel at least once a year and address the following activities, as applicable: used oil and spent solvent management; fueling procedures; general good housekeeping practices; proper painting procedures; and used battery management.

8.P.4 Additional SWPPP Requirements

8.P.4.1 Drainage Area Site Map

Identify in the SWPPP the following areas of the site and indicate whether activities occurring there may be exposed to precipitation/surface runoff: Fueling stations; vehicle/equipment maintenance or cleaning areas; storage areas for vehicle/equipment with actual or potential fluid leaks; loading/unloading areas; areas where treatment, storage or disposal of wastes occur; liquid storage tanks; processing areas; and storage areas.

8.P.4.2 Potential Pollutant Sources

Assess the potential for the following activities and site areas to contribute pollutants to stormwater discharges: Onsite waste storage or disposal; dirt/gravel parking areas for vehicles awaiting maintenance; illicit plumbing connections between shop floor drains and the stormwater conveyance system(s); and fueling areas. Describe these activities in the SWPPP.

8.P.4.3 Description of Good Housekeeping Measures

The permittee shall document in the site's SWPPP the good housekeeping measures implemented, consistent with Part 8.P.3.

8.P.4.4 Vehicle and Equipment Washwater Requirements

In accordance with Part 8.P.2.1, the permittee shall document in the SWPPP the methods of disposal of vehicle and equipment washwater (frequency and volume) generated at the site and the name of any permits required by that method. Discharges of vehicle and equipment wash water, including tank cleaning operations, are not authorized by this permit for this sector.

8.P.5 Additional Inspection Requirements (See also Part 4.1)

Inspect all the following areas/activities:

- a) Storage areas for vehicles/equipment awaiting maintenance;
- b) Fueling areas;
- c) Indoor and outdoor vehicle/equipment maintenance areas
- d) Material storage areas;
- e) Vehicle/equipment cleaning areas; and
- f) Loading/unloading areas.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart Q – Sector Q – Water Transportation

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.Q.1 Covered Stormwater Discharges

The requirements in Subpart Q apply to stormwater discharges associated with industrial activity from Water Transportation facilities as identified by the SIC Codes specified under Sector Q in Table C-1 of Appendix C of the permit.

8.Q.2 Limitations on Coverage

8.Q.2.1 Prohibition of Non-Stormwater Discharges (See also Part 1.1.4)

The following discharges are not authorized by this permit: bilge and ballast water, sanitary wastes, pressure wash water, and cooling water originating from vessels. Any discharge of these pollutants from a point source to a protected surface water may require coverage under an individual AZPDES permit.

8.Q.3 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.Q.3.1 Good Housekeeping Measures

The permittee shall implement the following good housekeeping measures in addition to the requirements of Part 2.2.1.2.2:

8.Q.3.1.1 Pressure Washing Area

If pressure washing is used to remove marine growth from vessels, the discharge water must be permitted by a separate AZPDES permit. Collect or contain the discharges from the pressure washing area so that they are not co-mingled with stormwater discharges authorized by this permit.

8.Q.3.1.2 Blasting and Painting Area

Minimize the potential for spent abrasives, paint chips, and overspray to discharge into protected surface waters or the storm sewer systems. Consider containing all blasting and painting activities or use other measures to minimize the discharge of contaminants (e.g., hanging plastic barriers or tarpaulins during blasting or painting operations to contain debris). When necessary, regularly clean stormwater conveyances of deposits of abrasive blasting debris and paint chips.

8.Q.3.1.3 Material Storage Areas

Store and plainly label all containerized materials (e.g., fuels, paints, solvents, waste oil, antifreeze, batteries) in a protected, secure location away from drains. Minimize the contamination of precipitation or surface runoff from the storage areas. Specify which materials are stored indoors, and install containment or

enclosure for those stored outdoors when feasible. If abrasive blasting is performed, implement control measures for the storage and disposal of spent abrasive materials generated at the site. Consider implementing an inventory control plan to limit the presence of potentially hazardous materials onsite.

8.Q.3.1.4 Engine Maintenance and Repair Areas

Minimize the contamination of precipitation or surface runoff from all areas used for engine maintenance and repair. Implement one or more of the following control measure options (or other equivalent measures): perform all maintenance activities indoors, maintain an organized inventory of materials used in the shop, drain all parts of fluid prior to disposal, prohibit the practice of hosing down the shop floor, use dry cleanup methods, and properly dispose or treat and/or recycle stormwater runoff collected from the maintenance area.

8.Q.3.1.5 Material Handling Area

Minimize the contamination of precipitation or surface runoff from material handling operations and areas (e.g., fueling, paint and solvent mixing, disposal of process wastewater streams from vessels). Implement one or more of the following control measure options (or other equivalent measures): cover fueling areas, use spill and overflow protection, mix paints and solvents in a designated area (preferably indoors or under a shed), and minimize runoff of stormwater to material handling areas.

8.Q.3.1.6 Drydock Activities - Routinely Maintain and Clean the Drydock to Minimize Pollutants in Stormwater Runoff

Clean accessible areas of the drydock prior to flooding, and perform final cleanup following removal of the vessel and raising the dock. Implement effective procedures for cleaning up oil, grease, and fuel spills occurring on the drydock, such as: sweeping rather than hosing off debris and spent blasting material from accessible areas of the drydock prior to flooding and making absorbent materials and oil containment booms readily available to clean up or contain any spills.

8.Q.3.2 Employee Training (See also Part 2.2.1.2.9)

Include the following (as applicable) in an employee training program: used oil management, spent solvent management, disposal of spent abrasives, disposal of vessel wastewaters, spill prevention and control, fueling procedures, general good housekeeping practices, painting and blasting procedures, and used battery management.

8.Q.3.3 Preventive Maintenance (See also Part 2.2.1.2.3)

As part of the site’s preventive maintenance program, perform timely inspection and maintenance of stormwater management devices (e.g., cleaning oil and water separators and sediment traps to ensure that spent abrasives, paint chips, and solids will be intercepted and retained prior to entering the storm drainage system). The permittee shall also routinely inspect and test site equipment and systems to uncover conditions that could cause breakdowns or failures resulting in discharges of pollutants to protected surface waters.

8.Q.4 Additional SWPPP Requirements

8.Q.4.1 Drainage Area Site Map (See also Part 5.1.2)

Document in the site’s SWPPP where any of the following may be exposed to precipitation or surface runoff: fueling; engine maintenance and repair; vessel

maintenance and repair; pressure washing; painting; sanding; blasting; welding; metal fabrication; loading and unloading areas; locations used for the treatment, storage, or disposal of wastes; liquid storage tanks; liquid storage areas (e.g., paint, solvents, resins); and material storage areas (e.g., blasting media, aluminum, steel, scrap iron).

8.Q.4.2 Summary of Potential Pollutant Sources (See also Part 5.1.3)

Document in the SWPPP the following additional sources and activities that have potential pollutants associated with them: outdoor manufacturing or processing activities (e.g., welding, metal fabricating) and significant dust or particulate generating processes (e.g., abrasive blasting, sanding, and painting.)

8.Q.5 Additional Inspection Requirements (See also Part 4.1)

Include the following in all quarterly routine site inspections: pressure washing area; blasting, sanding, and painting areas; material storage areas; engine maintenance and repair areas; material handling areas; drydock area; and general yard area.

8.Q.6 Sector-Specific Routine Analytical Monitoring Values (See also Part 6)

Table 8.Q-1 identifies routine analytical monitoring parameters and action levels that apply to Sector Q. These parameters and action levels apply to both the primary industrial activity and anyco-located industrial activities.

Table 8.Q-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector Q1. Water Transportation Facilities (SIC 4412-4499)	Total Phosphorus	PSWD ²
	Total Iron	PSWD ²
	Total Lead ¹	Hardness-Dependent
	Total Zinc ¹	Hardness-Dependent

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart R – Sector R – Ship and Boat Building and Repair Yards

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.R.1 Covered Stormwater Discharges

The requirements in Subpart R apply to stormwater discharges associated with industrial activity from Ship and Boat Building and Repair Yards as identified by the SIC Codes specified under Sector R in Table C-1 of Appendix C of the permit.

8.R.2 Limitations on Coverage

8.R.2.1 Prohibition of Non-Stormwater Discharges (See also Part 1.1.4)

The following discharges are not authorized by this permit: discharges containing bilge and ballast water, sanitary wastes, pressure wash water, and cooling water originating from vessels.

8.R.3 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.R.3.1 Good Housekeeping Measures. (See also Part 2.1.1.2)

8.R.3.1.1 Pressure Washing Area

If pressure washing is used to remove marine growth from vessels, the discharged water must be permitted as a process wastewater by a separate AZPDES permit.

8.R.3.1.2 Blasting and Painting Area

Minimize the potential for spent abrasives, paint chips, and overspray to discharging into the protected surface water or the storm sewer systems. The permittee shall contain all blasting and painting activities, or use other measures to prevent the discharge of the contaminants (e.g., hanging plastic barriers or tarpaulins during blasting or painting operations to contain debris). If deposits of abrasive blasting debris and paint chips reach stormwater conveyances, the permittee shall remove and properly dispose of all visible contaminants.

8.R.3.1.3 Material Storage Areas

Store and plainly label all containerized materials (e.g., fuels, paints, solvents, waste oil, antifreeze, batteries) in a protected, secure location away from drains. Minimize the contamination of precipitation or surface runoff from the storage areas. If abrasive blasting is performed, properly store and dispose of spent abrasive materials generated at the site. Implement an inventory control plan to limit the presence of potentially hazardous materials onsite.

8.R.3.1.4 Engine Maintenance and Repair Areas

Minimize the contamination of precipitation or surface runoff from all areas used for engine maintenance and repair. Implement one or more of the following

control measure options (or other equivalent measures): perform all maintenance activities indoors, maintain an organized inventory of materials used in the shop, drain all parts of fluid prior to disposal, prohibit the practice of hosing down the shop floor, use dry cleanup methods, and properly dispose, or treat and/or recycle stormwater runoff collected from the maintenance area.

8.R.3.1.5 Material Handling Area

Minimize the contamination of precipitation or surface runoff from material handling operations and areas (e.g., fueling, paint and solvent mixing, disposal of process wastewater streams from vessels). Implement one or more of the following control measure options (or other equivalent measures): cover fueling areas, use spill and overflow protection, mix paints and solvents in a designated area (preferably indoors or under a shed), and minimize stormwater run-on to material handling areas.

8.R.3.1.6 Drydock Activities

Routinely maintain and clean the drydock to minimize pollutants in stormwater runoff. Clean accessible areas of the drydock prior to flooding and perform final cleanup following removal of the vessel and raising the dock. Include procedures for cleaning up oil, grease, or fuel spills occurring on the drydock, such as the following (or other equivalent measures): sweep rather than hose off debris and spent blasting material from accessible areas of the drydock prior to flooding; and make absorbent materials and oil containment booms readily available to clean up and contain any spills.

8.R.3.2 Employee Training (See also Part 2.2.1.2.9)

Include the following (as applicable) in an employee training program: used oil management, spent solvent management, disposal of spent abrasives, disposal of vessel wastewaters, spill prevention and control, fueling procedures, general good housekeeping practices, painting and blasting procedures, and used battery management.

8.R.3.3 Preventive Maintenance (See also Part 2.2.1.2.3)

As part of the site’s preventive maintenance program, perform timely inspection and maintenance of stormwater management devices (e.g., cleaning oil and water separators and sediment traps to ensure that spent abrasives, paint chips, and solids will be intercepted and retained prior to entering the storm drainage system), as well as inspect and test site equipment and systems to uncover conditions that could cause breakdowns or failures resulting in discharges of pollutants to protected surface waters.

8.R.4 Additional SWPPP Requirements

8.R.4.1 Drainage Area Site Map (See also Part 5.1.2)

Document in the site’s SWPPP where any of the following may be exposed to precipitation or surface runoff: fueling; engine maintenance or repair; vessel maintenance or repair; pressure washing; painting; sanding; blasting; welding; metal fabrication; loading and unloading areas; treatment, storage, and waste disposal areas; liquid storage tanks; liquid storage areas (e.g., paint, solvents, resins); and material storage areas (e.g., blasting media, aluminum, steel, scrap iron).

8.R.4.2 Potential Pollutant Sources (See also Part 5.1.3)

Document in the SWPPP the following additional sources and activities that have potential pollutants associated with them (if applicable): outdoor manufacturing or processing activities (e.g., welding, metal fabricating) and significant dust or particulate generating processes (e.g., abrasive blasting, sanding, and painting).

8.R.4.3 Documentation of Good Housekeeping Measures

Document in the SWPPP any good housekeeping measures implemented to meet the effluent limits in Part 8.R.3.

8.R.4.3.1 Blasting and Painting Areas

Document in the SWPPP any standard operating practices relating to blasting and painting (e.g., prohibit uncontained blasting and painting over open water and prohibit blasting and painting during windy conditions, which can render containment ineffective).

8.R.4.3.2 Storage Areas

Specify in the SWPPP which materials are stored indoors, and implement containment or enclosure for those stored outdoors when feasible.

8.R.5 Additional Inspection Requirements (See also Part 4.1)

Include the following in all quarterly routine site inspections: pressure washing area; blasting, sanding, and painting areas; material storage areas; engine maintenance and repair areas; material handling areas; drydock area; and general yard area

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart S – Sector S – Air Transportation

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.S.1 Covered Stormwater Discharges

The requirements in Subpart S apply to stormwater discharges associated with industrial activity from Air Transportation facilities identified by the SIC Codes specified under Sector S in Table C-1 of Appendix C of the permit.

8.S.2 Limitation on Coverage

8.S.2.1 Limitations on Coverage

This permit authorizes stormwater discharges from only those portions of the air transportation site that are involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling and lubrication), equipment cleaning operations or deicing operations.

Deicing implies both deicing (removing frost, snow or ice) and anti-icing (preventing accumulation of frost, snow or ice) activities, unless specific mention is made regarding anti-icing and/or deicing activities.

8.S.2.2 Prohibition of Non-Stormwater Discharges (See also Part 1.1.4 and Part 8.S.5.3)

This permit does not authorize the discharge of aircraft, ground vehicle, runway and equipment washwaters; or the dry weather discharge of deicing chemicals. Such discharges must be covered by separate AZPDES permit(s). Note that a discharge resulting from snowmelt is not a dry weather discharge.

8.S.3 Multiple Operators at Air Transportation Facilities

Air transportation facilities often have more than one operator who could discharge stormwater associated with industrial activity. Operators include the airport authority and airport tenants, including air passenger or cargo companies, fixed-based operators, and other parties who routinely perform industrial activities on airport property.

8.S.3.1 Permit Coverage/Submittal of NOIs

Where an airport transportation site has multiple industrial operators that discharge stormwater, each individual operator must obtain coverage under an AZPDES stormwater permit. To obtain coverage under the MSGP, all such operators must meet the eligibility requirements in Part 1 and must submit an NOI, per Part 1.3.1. (or, if appropriate, a No Exposure Certification (NEC) per Part 1.5).

The airport authority shall maintain a complete inventory of airport tenants covered by the SWPPP. The inventory may consist of a list or copies of the tenant's NOIs. In either case, the records shall be easily accessible and made available upon request.

8.S.3.2 MSGP Implementation Responsibilities for Airport Authority and Tenants

The airport authority, in collaboration with its tenants, may choose to implement certain MSGP requirements on behalf of its tenants in order to increase efficiency and eliminate redundancy or duplication of effort. Options available to the airport authority and its tenants for implementation of MSGP requirements include:

- a) The airport authority performs certain activities on behalf of itself and its tenants and reports on those activities;
- b) Tenants provide the airport authority with relevant inputs about tenants' activities, including deicing chemical usage, and the airport authority compiles and reports on tenants' and its own activities;
- c) Tenants independently perform, document and submit required information on their activities;
- d) Tenants who report their deicing chemical usage to the airport authority and rely on the airport authority to perform monitoring should not check the glycol and urea use box on their NOI forms.

8.S.3.3 SWPPP Requirements

A single comprehensive SWPPP must be developed for all stormwater discharges associated with industrial activity at the airport before submittal of any NOIs. The comprehensive SWPPP should be developed collaboratively by the airport authority and tenants. If any operator (co-permittee) develops a separate SWPPP for discharges from its own areas of the airport, that SWPPP must be coordinated and integrated with the comprehensive SWPPP. Permittees under their own SWPPP must sign and certify their own SWPPP. Co-permittees that are under the airport authority SWPPP, shall sign and certify the comprehensive airport authority SWPPP.

All operators and their separate SWPPP contributions and compliance responsibilities must be clearly identified in the comprehensive SWPPP. As applicable, the SWPPP must clearly specify the MSGP requirements to be complied with by:

- a) The airport authority for itself;
- b) The airport authority on behalf of its tenants;
- c) The tenants for themselves.

For each activity that an operator (e.g., the airport authority) conducts on behalf of another operator (e.g., a tenant), the SWPPP must describe a process for reporting results to the latter operator and for ensuring appropriate follow-up, if necessary, by all affected operators. This is to ensure all actions are taken to correct any potential deficiencies or permit violations.

For example, where the airport authority is conducting monitoring for itself and its tenants, the SWPPP must identify how the airport authority will share the monitoring results with its tenants, and then follow-up with its tenants where there are any exceedances of permit limits. In turn, the SWPPP must describe how the tenants will also follow-up to ensure permit compliance.

8.S.3.4 Duty to Comply

All individual operators are responsible for implementing their assigned portion of the comprehensive SWPPP, and operators must ensure that their individual activities do not render another operator's stormwater controls ineffective. In addition, the standard permit conditions found in Appendix B apply to each individual operator, including B.1 Duty to Comply (which states, in part, each individual operator must comply with all conditions of this permit).

For multiple operators at an airport this means that each individual operator remains responsible for ensuring all requirements of its own MSGP coverage are met regardless of whether the comprehensive SWPPP allocates the actual implementation of any of those responsibilities to another entity. That is, the failure of the entity allocated responsibility in the SWPPP to implement an MSGP requirement on behalf of other operators does not negate the other operators' ultimate liability.

8.S.4 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.S.4.1 Good Housekeeping Measures.(See also Part 2.2.1.2.2)

8.S.4.1.1 Aircraft, Ground Vehicle, and Equipment Maintenance Areas

Minimize the contamination of stormwater runoff from all areas used for aircraft, ground vehicle and equipment maintenance (including the maintenance conducted on the terminal apron and in dedicated hangers). Implement one or more of the following control measure options where determined to be feasible and that accommodate considerations of safety, space, operational constraints, and flight considerations (or other equivalent measures): perform maintenance activities indoors; maintain an organized inventory of material used in the maintenance areas; drain all parts of fluids prior to disposal; prohibit the practice of hosing down the apron or hanger floor; use dry cleanup methods; and collect the stormwater runoff from the maintenance area and properly dispose or treat and recycling.

8.S.4.1.2 Aircraft, Ground Vehicle, and Equipment Cleaning Areas

Clearly demarcate these areas on the ground using signage or other appropriate means. Minimize the contamination of stormwater runoff from cleaning areas.

8.S.4.1.3 Aircraft, Ground Vehicle, and Equipment Storage Areas

Store all aircraft, ground vehicles and equipment awaiting maintenance in designated areas only and minimize the contamination of stormwater runoff from these storage areas implementing control measures, such as the following, where determined to be feasible and that accommodate considerations of safety, space, operational constraints, and flight considerations(or other equivalent measures): store aircraft and ground vehicles indoors when feasible; use drip pans for the collection of fluid leaks; and install perimeter drains, dikes or berms around storage areas.

8.S.4.1.4 Material Storage Areas

Maintain the vessels of stored materials (e.g., used oils, hydraulic fluids, spent solvents, and waste aircraft fuel) in good condition, to prevent or minimize contamination of stormwater. Also plainly label the vessels (e.g., "used oil," "Contaminated Jet A," etc.). To minimize contamination of precipitation/runoff from these areas, implement control measures such as the following, where determined to be feasible and that accommodate considerations of safety, space, operational constraints, and flight considerations (or other equivalent measure): storing materials indoors; storing waste materials in a centralized location; and installing berms/dikes around storage areas.

8.S.4.1.5 Airport Fuel System and Fueling Areas

Minimize the discharge of pollutants in stormwater from airport fuel system and fueling areas through implementation of control measures such as the following, where determined to be feasible and that accommodate considerations of safety, space, operational constraints, and flight considerations (list not exclusive): implementing spill and overflow practices; using only dry cleanup methods; and collecting stormwater runoff. If the site has implemented a Spill Prevention, Control and Countermeasure (SPCC) plan developed in accordance with the 2009 amendments to the SPCC rule, the site may cite the relevant aspects from the SPCC plan that comply with the requirements of this section in the SWPPP.

8.S.4.1.6 Source Reduction

Consistent with safety considerations, minimize, the use of urea and glycol-based deicing chemicals, in order to reduce the aggregate amount of deicing chemicals used and/or lessen the environmental impact. Chemical options to replace ethylene glycol, propylene glycol and urea include: potassium acetate; magnesium acetate; calcium acetate; and anhydrous sodium acetate.

8.S.4.1.6.1 Runway Deicing Operation

To minimize the discharge of pollutants in stormwater from runway deicing operations, implement source reduction control measures such as the following, where determined to be feasible and that accommodate considerations of safety, space, operational constraints, and flight considerations (list not exclusive): metered application of chemicals; pre-wetting dry chemical constituents prior to application; installing a runway ice detection system; implementing anti-icing operations as a preventive measure against ice buildup; heating sand; and product substitution.

8.S.4.1.6.2 Aircraft Deicing Operation

Minimize the discharge of pollutants in stormwater from aircraft deicing operations. Determine whether excessive application of deicing chemicals occurs and adjust as necessary, consistent with considerations of flight safety. Determine whether alternatives to glycol and whether containment measures for applied chemicals are feasible. Implement control measures for reducing deicing fluid such as the following, where determined to be feasible and that accommodate considerations of safety, space, operational constraints, and flight considerations (list not exclusive): forced-air deicing systems, computer-controlled fixed-gantry systems, infrared technology, hot water, varying glycol content to air temperature, enclosed-basket deicing trucks, mechanical methods, solar radiation, hangar storage, aircraft covers, and thermal blankets for MD-80s and DC-9s.

Consider using ice-detection systems and airport traffic flow strategies and departure slot allocation systems where feasible and that accommodate considerations of safety, space, operational constraints, and flight considerations. The evaluations and determinations required by this Part should be carried out by the personnel most familiar with the particular aircraft and flight operations and related systems in question (versus an outside entity such as the airport authority).

8.S.4.1.7 Management of Runoff (See also Part 2.2.1.2.6)

Minimize the discharge of pollutants in stormwater from deicing chemicals in runoff. To minimize discharges of pollutants in stormwater from aircraft deicing, implement runoff management control measures such as the following, where determined to be feasible and that accommodate considerations of safety, space, operational constraints, and flight considerations (list not exclusive):

- a) Installing a centralized deicing pad to recover deicing fluid following application; plug-and-pump (PnP);
- b) Using vacuum/collection trucks (glycol recovery vehicles);
- c) Storing contaminated stormwater/deicing fluids in tanks;
- d) Recycling collected deicing fluid where feasible; releasing controlled amounts to a publicly owned treatment works;
- e) Separation of contaminated snow; conveying contaminated runoff into a stormwater impoundment for biochemical decomposition (be aware of attracting wildlife that may prove hazardous to flight operations); and
- f) Directing runoff into vegetative swales or other infiltration measures.

To minimize discharges of pollutants in stormwater from runway deicing, implement runoff management control measures such as the following, where determined to be feasible and that accommodate considerations of safety, space, operational constraints, and flight considerations (list not exclusive):

- a) Mechanical systems (snow plows, brushes);
- b) Conveying contaminated runoff into swales and/or a stormwater impoundment; and
- c) Pollution prevention practices such as ice detection systems, and airfield prewetting.

When applying deicing fluids during non-precipitation events (also referred to as “clear ice deicing”), implement control measures to prevent unauthorized discharge of pollutants (dry-weather discharges of pollutants would need coverage under an AZPDES wastewater permit), or to minimize the discharge of pollutants from deicing fluids in later stormwater discharges, implement control measures such as the following, where determined to be feasible and that accommodate considerations safety, space, operational constraints, and flight considerations (list not exclusive):

- a) Recovering deicing fluids;
- b) Preventing the fluids from entering storm sewers or other stormwater discharge conveyances (e.g., covering storm sewer inlets, using booms, installing absorptive interceptors in the drains);
- c) Releasing controlled amounts to a publicly owned treatment works.

Used deicing fluid should be recycled whenever practicable.

8.S.4.2 Deicing Season

The permittee shall determine the seasonal timeframe (e.g., December- February, October - March, etc.) during which deicing activities typically occur at the site. The permittee shall implement control measures, site inspections and monitoring with particular emphasis throughout the defined deicing season. When the deicing chemical usage thresholds of 100,000 gallons glycol and/or 100 tons of urea are met, the permittee shall obtain the four required routine analytical monitoring event results for deicing-related parameters, i.e., BOD, COD, ammonia and pH. This sampling timeframe shall occur during the deicing season identified above. See also Part 8.S.7.

8.S.5 Additional Corrective Action Reporting Requirements (See also Parts 3.2)

The permittee holder (whoever applies for the NOI) is responsible for signing and certifying the Corrective Action Report (Part 3.2), regardless if a tenant has jointly prepared the SWPPP with the airport authority. Any corrective documentation shall be kept with the applicable SWPPP (tenant SWPPP or airport authority SWPPP).

8.S.6 Additional SWPPP Requirements

An airport authority and tenants of the airport are encouraged to work in partnership in the development of a SWPPP. If an airport tenant obtains authorization under this permit and develops a SWPPP for discharges from its own areas of the airport, prior to authorization, that SWPPP must be coordinated and integrated with the SWPPP for the entire airport. Tenants of the airport site include air passenger or cargo companies, fixed based operators and other parties who have contracts with the airport authority to conduct business operations on airport property and whose operations result in stormwater discharges associated with industrial activity.

8.S.6.1 Drainage Area Site Map

Document in the SWPPP the following areas of the site and indicate whether activities occurring there may be exposed to precipitation/surface runoff: aircraft and runway deicing operations; fueling stations; aircraft, ground vehicle and equipment maintenance/cleaning areas; storage areas for aircraft, ground vehicles and equipment awaiting maintenance.

8.S.6.2 Potential Pollutant Sources

In the site's inventory of exposed materials, the SWPPP shall describe the potential for the following activities and site areas to contribute pollutants to stormwater discharges:

- a) Aircraft, runway, ground vehicle and equipment maintenance and cleaning; and
- b) Aircraft and runway deicing operations (including apron and centralized aircraft deicing stations, runways, taxiways and ramps).

When deicing chemicals are used, the permittee shall maintain a record of the types (including the Safety Data Sheets [SDS]) used and the monthly quantities, either as measured or, in the absence of metering, using best estimates must be maintained. This includes all deicing chemicals, not just glycols and urea (e.g., potassium acetate), because large quantities of these other chemicals can still have an adverse impact on protected surface waters. Tenants or other fixed-based operations that conduct deicing operations must provide the above information to the airport authority for inclusion with any comprehensive airport SWPPPs.

8.S.6.3 Vehicle and Equipment Washwater Requirements

If wash water is handled in a manner that does not involve separate AZPDES permitting or local pretreatment requirements (e.g., hauled offsite, retained onsite), describe the disposal method and include all pertinent information (e.g., frequency, volume, destination) in the SWPPP. Discharges of vehicle and equipment wash water are not authorized by this permit for this sector.

8.S.5.4 Documentation of Control Measures Used for Management of Runoff

Document in the SWPPP the control measures used for collecting or containing contaminated melt water from collection areas used for disposal of contaminated snow.

8.S.6 Additional Inspection Requirements

8.S.6.1 Inspections

At a minimum, conduct routine site inspections at least monthly during the deicing season. If the site needs to deice before or after this period, expand the monthly inspections to include all months during which deicing chemicals may be used. The Director may specifically require an increase in inspection frequencies.

Using only qualified personnel, conduct one of the quarterly site inspections during periods of actual deicing operations, if possible. If not practicable during active deicing because of weather, conduct the inspection during the season when deicing operations occur and the materials and equipment for deicing are in place.

8.S.7 Sector-Specific Routine Analytical Monitoring Values (See also Part 6.)

Table 8.S-1 identifies routine analytical monitoring parameters and action levels that apply to Sector S. These parameters and action levels apply to both the primary industrial activity and any co-located industrial activities.

Table 8.S-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
For airports where a single permittee, or a combination of permitted facilities use more than 100,000 gallons of glycol-based deicing chemicals and/or 100 tons or more of urea on an average annual basis, monitor the first four parameters in those outfalls that collect runoff from areas where deicing activities occur (SIC 4512-4581).	Biochemical Oxygen Demand (BOD ₅) ¹	30 mg/L
	Chemical Oxygen Demand (COD) ¹	120 mg/L
	Ammonia ^{1, 2, 3}	PSWD ²
	pH ¹	6.0 – 9.0 s.u.

¹ These are deicing-related parameters. Collect the two routine analytical monitoring samples, during the timeframe defined in Part 8.S.4.2 when deicing activities are occurring.

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

³ The ammonia action level is dependent on pH. See A.A.C. R18-11 Article 1, Appendix A, Table 11.

8.S.8 Visual Assessment Alternative for Sector S Facilities

The airport authority may choose to conduct visual assessments in accordance with the optional Alternative Stormwater Visual Assessment Requirements.

8.S.8.1 Requirements for Optional Alternative Stormwater Visual Assessments

The alternative for visual assessments at airports includes the following requirements:

1. Visual assessment must be conducted two (2) times per wet season at each of the main outfall(s).

If this optional visual assessment approach is selected, the airport and its co-permittees cannot make use of the substantially identical outfall provision of this permit for outfalls that receive industrial stormwater combined from two (2) or more permitted facilities. The airport retains the option to use the substantially identical outfall provision for those outfalls that do not receive combined industrial stormwater discharges from co-permittee facilities, provided permit substantially identical outfalls provisions are met (see Appendix A).

2. The stormwater pollution prevention plan (SWPPP) must include a detailed process for identifying pollutant sources. The process shall take into consideration how the pollution prevention team will trace a pollutant discovered in a visual assessment sample from a mainoutfall back to a particular tenant or source. The process must include, at a minimum, the following:

- a) Identification of personnel (by name and/or title) involved in visual assessment monitoring;
- b) Actions to be taken to identify pollutant source(s);
- c) Timeframes for actions to identify pollutants source(s), notifying tenant(s), and correcting control measure deficiencies; and
- d) Documentation of actions and outcome.

3. For the first two years of the permit (and thereafter if requested by ADEQ), the airport authority shall submit documentation of visual assessment activities to the Department no later than June 30 of each year. The documentation must include the information specified in section 4.2.2 of the permit as well as the following:

- a) Physical indicator parameters listed in section 4.2.1; and
- b) The action step(s), source(s), and outcome for each follow up investigation.

If information becomes available to the Department that demonstrates this optional alternative approach is ineffective at evaluating control measures, the Department may withdraw the alternative approach either in whole or on a site by site basis.

8.S.9 Effluent Limitations Based on Effluent Limitations Guidelines and New Source Performance Standards (See also Part 6.2.2.) (Applicable only to discharges to WOTUS)

NOTE: This section does not apply for discharges to non-WOTUS protected surface waters.

8.S.9.1 Airfield Pavement Deicing

For both existing and new “primary airports” (as defined at 40 CFR 449.2) with 1,000 or more annual non-propeller aircraft departures that discharge stormwater from airfield pavement deicing activities, there shall be no discharge of airfield pavement deicers containing urea. To comply with this limitation, such airports must do one of the following: (1) keep an updated statement in the SWPPP that certifies that the permittees do not use pavement deicers containing urea, or (2) meet the effluent limitation in Table 8.S-2.

8.S.9.2 Aircraft Deicing

Airports that are both “primary airports” (as defined at 40 CFR 449.2) and new sources (“new airports”) with 1,000 or more annual non-propeller aircraft departures must meet the applicable requirements for aircraft deicing at 40 CFR 449.11(a). Discharges of the collected aircraft deicing fluid directly to a protected surface water are not eligible for coverage under this permit.

8.S.9.3 Monitoring, Reporting and Recordkeeping

For new and existing airports subject to the effluent limitations in Part 8.S.9.1 or 8.S.9.2 of this permit, permittees must comply with the applicable monitoring, reporting and recordkeeping requirements outlined in 40 CFR 449.20.

Table 8.S-2		
Industrial Activity	Parameter	Effluent Limitation
Runoff containing urea from airfield pavement deicing at existing and new primary airports with 1,000 or more annual non-propeller aircraft departures	Ammonia as Nitrogen	14.7 mg/L, daily maximum

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart T – Sector T – Treatment Works

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.T.1 Covered Stormwater Discharges

The requirements in Subpart T apply to stormwater discharges associated with industrial activity from Treatment Works as identified by the Activity Code specified under Sector T in Table C-1 of Appendix C of the permit.

8.T.2 Industrial Activities Covered by Sector T

The requirements listed under this part apply to all existing point source stormwater discharges associated with the following activities:

8.T.2.1 Treatment works treating domestic sewage, or any other sewage sludge or wastewater treatment device or system used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge; that are located within the confines of a site with a design flow of 1.0 million gallons per day (MGD) or more; or are required to have an approved pretreatment program under 40 CFR Part 403.

8.T.2.2 The following are not required to have permit coverage: farm lands, domestic gardens or lands used for sludge management where sludge is beneficially reused and which are not physically located within the site, or areas that are in compliance with Section 405 of the CWA.

8.T.3 Limitations on Coverage

8.T.3.1 Prohibition of Non-Stormwater Discharges (See also Part 1.1.4 and Part 8.T.5.3)

Sanitary and industrial wastewater and equipment and vehicle washwater are not authorized by this permit.

8.T.4 Additional Technology- Based Effluent Limits (Applicable only to discharges to WOTUS)

8.T.4.1 Control Measures (See also the non-numeric effluent limits in Part 2.2.1.2.2)

In addition to the other control measures, implement the following, or other equivalent measures when feasible: routing stormwater to the treatment works; or covering exposed materials (i.e., from the following areas: grit, screenings, and other solids handling, storage, or disposal areas; sludge drying beds; dried sludge piles; compost piles; and septage or hauled waste receiving station).

8.T.4.2 Employee Training (See also Part 2.2.1.2.9)

Include the following (as applicable) in an employee training program: petroleum product management; process chemical management; spill prevention and controls; fueling procedures; general good housekeeping practices; and proper procedures for using fertilizer, herbicides, and pesticides.

8.T.5 Additional SWPPP Requirements

8.T.5.1 Site Map (See also Part 5.1.2)

Document in the site's SWPPP where any of the following may be exposed to precipitation or surface runoff: grit, screenings, and other solids handling, storage, or disposal areas; sludge drying beds; dried sludge piles; compost piles; septage or hauled waste receiving station; and storage areas for process chemicals, petroleum products, solvents, fertilizers, herbicides, and pesticides.

8.T.5.2 Potential Pollutant Sources (See also Part 5.1.3)

Document in the SWPPP the following additional sources and activities that have potential pollutants associated with them, as applicable: grit, screenings, and other solids handling, storage, or disposal areas; sludge drying beds; dried sludge piles; compost piles; septage or hauled waste receiving station; and access roads and rail lines.

8.T.5.3 Wastewater and Washwater Requirements

If wastewater and/or vehicle and equipment wash water is not covered by another AZPDES permit but is handled in another manner (e.g., hauled offsite, retained onsite), the disposal method (in accordance with Part 8.T.3.1) must be described and all pertinent information (e.g., frequency, volume, and destination) must be included in the SWPPP. Discharges of vehicle and equipment wash water, including tank cleaning operations, are not authorized by this permit for this sector site.

8.T.6 Additional Inspection Requirements (See also Part 4.1)

Include the following areas in all inspections: access roads and rail lines; grit, screenings, and other solids handling, storage, or disposal areas; sludge drying beds; dried sludge piles; compost piles; and septage or hauled waste receiving station.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart U – Sector U – Food and Kindred Products

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.U.1 Covered Stormwater Discharges

The requirements in Subpart U apply to stormwater discharges associated with industrial activity from Food and Kindred Products facilities as identified by the SIC Codes specified in Table C-1 of Appendix C of the permit.

8.U.2 Limitations on Coverage

8.U.2.1 Prohibition of Non-Stormwater Discharges (See also Part 1.1.4)

The following discharges are not authorized by this permit: discharges containing boiler blowdown, cooling tower overflow and blowdown, ammonia refrigeration purging, and vehicle washing and clean-out operations.

8.U.3 Additional Technology Based Limitations (Applicable only to discharges to WOTUS)

8.U.3.1 Employee Training (See also Part 2.2.1.2.9)

Include pest control in the site's employee training program.

8.U.4 Additional SWPPP Requirements

8.U.4.1 Drainage Area Site Map (See also Part 5.1.2)

Document in the site's SWPPP the locations of the following activities if they are exposed to precipitation or runoff: vents and stacks from cooking, drying, and similar operations; dry product vacuum transfer lines; animal holding pens; spoiled product; and broken product container storage areas.

8.U.4.2 Potential Pollutant Sources (See also Part 5.1.3)

Document in the SWPPP, in addition to food and kindred products processing-related industrial activities, application and storage of pest control chemicals (e.g., rodenticides, insecticides, fungicides) used on plant grounds.

8.U.5 Additional Inspection Requirements (See also Part 4.1)

Inspect on a quarterly basis, at a minimum, the following areas where the potential for exposure to stormwater exists: loading and unloading areas for all significant materials; storage areas, including associated containment areas; waste management units; vents and stacks emanating from industrial activities; spoiled product and broken product container holding areas; animal holding pens; staging areas; and air pollution control equipment.

8.U.6 Sector-Specific Routine Analytical Monitoring Values (See also Part 6.)

Table 8.U-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector U. These parameters and action levels apply to both the primary industrial

Table 8.U-1		
Subsector (Site discharges may be subject to requirements for more than one Sector / Subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector U1. Grain Mill Products (SIC 2041-2048)	Total Suspended Solids (TSS)	100 mg/L
Subsector U2. Fats and Oils Products (SIC 2074-2079)	pH	6.0- 9.0 s.u.
	Nitrate plus Nitrite Nitrogen	PSWD ¹
	Total Suspended Solids (TSS)	100 mg/L

¹ PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart V – Sector V – Textile Mills, Apparel, and Other Fabric Products

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.V.1 Covered Stormwater Discharges

The requirements in Subpart V apply to stormwater discharges associated with industrial activity from Textile Mills, Apparel, and Other Fabric Product manufacturing as identified by the SIC Codes specified under Sector V in Table C-1 of Appendix C of the permit.

8.V.2 Limitations on Coverage

8.V.2.1 Prohibition of Non-Stormwater Discharges (See also Part 1.1.4)

The following discharges are not authorized by this permit:

- a) Wastewater (e.g., wastewater resulting from wet processing or from any processes relating to the production process);
- b) Reused or recycled water; and
- c) Waters used in cooling towers.

A site with these types of discharges shall be covered under a separate AZPDES permit.

8.V.3 Additional Technology Based Limitations (Applicable only to discharges to WOTUS)

8.V.3.1.1 Material Storage Areas

Plainly label and store all containerized materials (e.g., fuels, petroleum products, solvents, and dyes) in a protected area, away from drains. Minimize contamination of the stormwater runoff from such storage areas. Implement an inventory control plan to prevent excessive purchasing of potentially hazardous substances. If storing empty chemical drums or containers, ensure that the drums and containers are clean and that there is no contact of residuals with precipitation or runoff. Collect and dispose of washwater from these cleanings properly.

8.V.3.1.2 Material Handling Areas

Minimize contamination of stormwater runoff from material handling operations and areas. Implement one or more of the following (or other equivalent measures): use spill and overflow protection; cover fueling areas; and cover or enclose areas where the transfer of material may occur. When applicable, replace or repair leaking connections, valves, transfer lines, and pipes that may carry chemicals, dyes, or wastewater.

8.V.3.1.3 Fueling Areas

Minimize contamination of stormwater runoff from fueling areas. Implement one or more of the following (or other equivalent measures): cover the fueling area, use spill and overflow protection, minimize run-on of stormwater to the fueling areas, use dry cleanup methods, and dispose, treat and/or recycling stormwater runoff collected from the fueling area.

8.V.3.1.4 Above-Ground Storage Tank Area

Minimize contamination of the stormwater runoff from above-ground storage tank areas, including the associated piping and valves. Implement one or more of the following (or other equivalent measures): regular cleanup of these areas; including measures for tanks, piping and valves; minimize runoff of stormwater from adjacent areas; restrict access to the area; insert filters in adjacent catch basins; provide absorbent booms in unbermed fueling areas; use dry cleanup methods; and permanently seal drains within critical areas that may discharge to a storm drain.

8.V.3.2 Employee Training (See also Part 2.2.1.2.9)

Include the following (as applicable) in an employee training program: use of reused and recycled waters, solvents management, proper disposal of dyes, proper disposal of petroleum products and spent lubricants, spill prevention and control, fueling procedures, and general good housekeeping practices.

8.V.4 Additional SWPPP Requirements

8.V.4.1 Potential Pollutant Sources

Document in the site's SWPPP the following additional sources and activities that have potential pollutants associated with them: industry-specific significant materials and industrial activities (e.g., backwinding, beaming, bleaching, backing bonding, carbonizing, carding, cut and sew operations, desizing, drawing, dyeing locking, fulling, knitting, mercerizing, opening, packing, plying, scouring, slashing, spinning, synthetic-felt processing, textile waste processing, tufting, turning, weaving, web forming, winging, yarn spinning, and yarn texturing).

8.V.4.2 Description of Good Housekeeping Measures for Material Storage Areas

Document in the SWPPP the site's containment area or enclosure for materials stored outdoors in connection with Part 8.V.3.1.1 above.

8.V.5 Additional Inspection Requirements (See also Part 4.1)

Inspect, at least monthly, the following activities and areas: transfer and transmission lines, spill prevention, good housekeeping practices, management of process waste products, and all structural and nonstructural stormwater management practices.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart W – Sector W – Furniture and Fixtures

The permittee shall comply with Part 8 sector-specific requirements associated with the site’s primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.W.1 Covered Stormwater Discharges

The requirements in Subpart W apply to stormwater discharges associated with industrial activity from Furniture and Fixtures facilities as identified by the SIC Codes specified under Sector W in Table C-1 of Appendix C of the permit.

8.W.2 Additional SWPPP Requirements

8.W.2.1 Drainage Area Site Map (See also Part 5.1.2)

Document in the site’s SWPPP where any of the following may be exposed to precipitation or surface runoff: material storage (including tanks or other vessels used for liquid or waste storage) areas; outdoor material processing areas; areas where wastes are treated, stored, or disposed; access roads; and rail spurs.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart X – Sector X – Printing and Publishing

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.X.1 Covered Stormwater Discharges

The requirements in Subpart X apply to stormwater discharges associated with industrial activity from Printing and Publishing facilities as identified by the SIC Codes specified under Sector X in Table C-1 of Appendix C of the permit.

8.X.2 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.X.2.1 Good Housekeeping Measures (See also Part 2.2.1.2.2)

8.X.2.1.1 Material Storage Areas

Plainly label and store all containerized materials (e.g., skids, pallets, solvents, bulk inks, hazardous waste, empty drums, portable and mobile containers of plant debris, wood crates, steel racks, and fuel oil) in a protected area, away from drains. Minimize contamination of the stormwater runoff from such storage areas. Implement an inventory control plan to prevent excessive purchasing of potentially hazardous substances.

8.X.2.1.2 Material Handling Area

Minimize contamination of stormwater runoff from material handling operations and areas (e.g., blanket wash, mixing solvents, loading and unloading materials). Implement one or more of the following (or other equivalent measures): using spill and overflow protection, cover fueling areas, and cover or enclose areas where the transfer of materials may occur. When applicable, replace or repair leaking connections, valves, transfer lines, and pipes that may carry chemicals or wastewater.

8.X.2.1.3 Fueling Areas

Minimize contamination of stormwater runoff from fueling areas. Implement one or more of the following (or other equivalent measures): cover the fueling area, use spill and overflow protection, minimize runoff of stormwater to the fueling areas, use dry cleanup methods, and properly dispose, treat and/or recycling stormwater runoff collected from the fueling area.

8.X.2.1.4 Above Ground Storage Tank Area

Minimize contamination of the stormwater runoff from above-ground storage tank areas, including the associated piping and valves. Implement one or more of the following (or other equivalent measures): regularly clean these areas, explicitly address tanks, piping and valves in the site's SPCC program, minimize stormwater runoff from adjacent areas, restrict access to the area, insert filters in adjacent catch basins, provide absorbent booms in unbermed fueling areas, use dry cleanup methods, and permanently seal drains within critical areas that may discharge to a storm drain.

8.X.2.2 Employee Training (See also Part 2.2.1.2.9)

Include the following (as applicable) in an employee training program: spent solvent management, spill prevention and control, used oil management, fueling procedures, and general good housekeeping practices.

8.X.3 Additional SWPPP Requirements

In connection with Part 8.X.2.1.1, describe in the SWPPP the containment area or enclosure for materials stored outdoors.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart Y – Sector Y – Rubber, Misc. Plastic Products, and Misc. Manufacturing Industries

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.Y.1 Covered Stormwater Discharges

The requirements in Subpart Y apply to stormwater discharges associated with industrial activity from Rubber, Miscellaneous Plastic Products, and Miscellaneous Manufacturing Industries facilities as identified by the SIC Codes specified under Sector Y in Table C-1 of Appendix C of the permit.

8.Y.2 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.Y.2.1 Controls for Rubber Manufacturers (See also Part 2.2.1.1)

Minimize the discharge of zinc in the site's stormwater discharges. Parts 8.Y.2.1.1 to 8.Y.2.1.5 give possible sources of zinc to be reviewed and list some specific control measures for implementation (or their equivalents). Other general control measure options to consider (list not exclusive): using chemicals purchased in pre-weighed, sealed polyethylene bags; storing in-use materials in sealable containers, ensuring airspace between the container and the cover to minimize "puffing" losses when the container is opened, and using automatic dispensing and weighing equipment.

8.Y.2.1.1 Zinc Bags

Ensure proper handling and storage of zinc bags at the site. Include the following (as applicable) in an employee training program: the handling and storage of zinc bags, indoor storage of zinc bags, and cleanup of zinc spills without washing the zinc into the storm drain. Consider the use of 2,500-pound sacks of zinc rather than 50- to 100-pound sacks.

8.Y.2.1.2 Dumpsters

Minimize discharges of zinc from dumpsters. Implement the following control measures where determined feasible: cover and line dumpsters containing zinc bags or residue or move the dumpster indoors.

8.Y.2.1.3 Dust Collectors and Baghouses

Minimize contributions of zinc to stormwater from dust collectors and baghouses. Replace or repair, as appropriate, improperly operating dust collectors and baghouses.

8.Y.2.1.4 Grinding Operations

Minimize contamination of stormwater as a result of dust generation from rubber grinding operations, where determined feasible, installing a dust collection system.

8.Y.2.1.5 Zinc Stearate Coating Operations

Minimize the potential for stormwater contamination from drips and spills of zinc stearate slurry that may be released to the storm drain, where determined to be feasible, use alternative compounds to zinc stearate.

8.Y.2.2 Controls for Plastic Products Manufacturers

Minimize the discharge of plastic resin pellets in the site's stormwater discharges. Implement the following control measures were determined to be feasible (list not exclusive) minimize spills, clean up spills promptly and thoroughly, sweep thoroughly, train employees on proper handling, recapture pellets when possible, and disposal precautions.

8.Y.3 Additional SWPPP Requirements

8.Y.3.1 Potential Pollutant Sources for Rubber Manufacturers (See also Part 5.1.3)

Document in the SWPPP the use of zinc at the site and the possible pathways through which zinc may be discharged in stormwater runoff.

8.Y.4 Sector-Specific Routine Analytical Monitoring Values (See also Part 6.)

Table 8.Y-1 identifies routine analytical monitoring parameters and action levels that apply to Sector Y. These parameters and action levels apply to both the primary industrial activity and any co-located industrial activities.

Table 8.Y-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector Y1. Rubber Products Manufacturing (SIC 3011, 3021, 3052, 3053, 3061, 3069)	Total Zinc ¹	Hardness-Dependent

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart Z – Sector Z – Leather Tanning and Finishing

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.Z.1 Covered Stormwater Discharges

The requirements in Subpart Z apply to stormwater discharges associated with industrial activity from Leather Tanning and Finishing facilities as identified by the SIC Code specified under Sector Z in Table C-1 of Appendix C of the permit.

8.Z.2 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.Z.2.3 Good Housekeeping Measures (See also Part 2.2.1.2.2)

8.Z.2.3.1 Storage Areas for Raw, Semi-processed, or Finished Tannery By-products

Minimize contamination of stormwater runoff from pallets and bales of raw, semi-processed, or finished tannery by-products (e.g., splits, trimmings, shavings). Consider indoor storage or protect outdoor storage areas with polyethylene wrapping, tarpaulins, roofed storage, etc. When feasible, place materials on an impermeable surface and enclose or install berms (or other equivalent measures) around the area to prevent stormwater run-on and runoff where practicable.

8.Z.2.3.2 Material Storage Areas

Label storage containers of all materials (e.g., specific chemicals, hazardous materials, spent solvents, waste materials) and minimize contact of such materials with stormwater.

8.Z.2.3.3 Buffing and Shaving Areas

Minimize contamination of stormwater runoff with leather dust from buffing and shaving areas where determined feasible, by implementing dust collection enclosures, preventive inspection and maintenance programs, or other appropriate preventive measures.

8.Z.2.3.4 Receiving, Unloading, and Storage Areas

Minimize contamination of stormwater runoff from receiving, unloading, and storage areas. If these areas are exposed, implement the following where determined feasible (or other equivalent measures): cover all hides and chemical supplies, divert drainage to the process sewer, or place berms or curbs around the area to prevent stormwater runoff.

8.Z.2.3.5 Outdoor Storage of Contaminated Equipment

Minimize contact of stormwater with contaminated equipment. Implement the following where determined feasible (or other equivalent measures): clean thoroughly prior to storage, or cover equipment, or divert drainage to the process sewer.

8.Z.2.3.6 Waste Management

Minimize contamination of stormwater runoff from waste storage areas. Implement the following where determined feasible (or other equivalent measures): cover dumpsters or move waste management activities indoors, cover waste piles with temporary covering material such as tarpaulins or polyethylene, and minimize stormwater runoff by enclosing the area or placing berms around the area.

8.Z.3 Additional SWPPP Requirements

8.Z.3.1 Drainage Area Site Map (See also Part 5.1.2)

Identify in the site's SWPPP where any of the following may be exposed to precipitation or surface runoff: processing and storage areas of the beamhouse, tanyard, and re-tan wet finishing and dry finishing operations.

8.Z.3.2 Potential Pollutant Sources (See also Part 5.1.3)

Document in the SWPPP the following sources and activities that have potential pollutants associated with them (as appropriate): temporary or permanent storage of fresh and brine-cured hides; extraneous hide substances and hair; leather dust, scraps, trimmings, and shavings.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart AA – Sector AA – Fabricated Metal Products

The permittee shall comply with Part 8 sector-specific requirements associated with the site’s primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.AA.1 Covered Stormwater Discharges

The requirements in Subpart AA apply to stormwater discharges associated with industrial activity from Fabricated Metal Products facilities as identified by the SIC Codes specified under Sector AA in Table C-1 of Appendix C of the permit.

8.AA.2 Additional Technology-Based Effluent Limits (Applicable only to discharges to WOTUS)

8.AA.2.1 Good Housekeeping Measures (See also Part 2.2.1.2.2)

8.AA.2.1.1 Raw Steel Handling Storage

Minimize the generation of and/or recover and properly manage scrap metals, fines, and iron dust. Include measures for containing materials within storage handling areas.

8.AA.2.1.2 Paints and Painting Equipment

Minimize exposure of paint and painting equipment to stormwater.

8.AA.2.2 Spill Prevention and Response Procedures (See also Part 2.2.1.2.4)

The permittee shall ensure that the necessary equipment to implement a cleanup is available to personnel. The following areas shall be addressed:

8.AA.2.2.1 Metal Fabricating Areas

Maintain clean, dry, orderly conditions in these areas. Use dry clean-up techniques where feasible.

8.AA.2.2.2 Storage Areas for Raw Metal

Keep these areas free of conditions that could cause, or impede appropriate and timely response to, spills or leakage of materials. Maintain storage areas so that there is easy access in the event of a spill, and label stored materials to aid in identifying spill contents.

8.AA.2.2.3 Metal Working Fluid Storage Areas

Minimize the potential for stormwater contamination from storage areas for metal working fluids.

8.AA.2.2.4 Cleaners and Rinse Water

Control and clean up spills of solvents and other liquid cleaners, control sand buildup and disbursement from sand-blasting operations, and prevent exposure of recyclable wastes. Substitute environmentally benign cleaners when possible.

8.AA.2.2.5 Lubricating Oil and Hydraulic Fluid Operations

Minimize the potential for stormwater contamination from lubricating oil and hydraulic fluid operations. Use monitoring equipment or other devices to detect and control leaks and overflows. Install perimeter controls such as dikes, curbs, grass filter strips, or equivalent measures if any operations occur outside.

8.AA.2.2.6 Chemical Storage Areas

Minimize stormwater contamination and accidental spillage in chemical storage areas. Include a program to inspect containers and identify proper disposal methods.

8.AA.2.3 Spills and Leaks (See also Part 5.1.3.3)

In the site's spill prevention and response procedures, required by Part 2.2.1.2.4, determine whether chromium, toluene, pickle liquor, sulfuric acid, zinc and other water priority chemicals, and hazardous chemicals and wastes are present. If present, ensure the spill prevention and response procedures specifically address these chemicals.

8.AA.3 Additional SWPPP Requirements

8.AA.3.1 Drainage Area Site Map (See also Part 5.1.2)

Document in the site's SWPPP where any of the following may be exposed to precipitation or surface runoff: raw metal storage areas; finished metal storage areas; scrap disposal collection sites; equipment storage areas; retention and detention basins; temporary and permanent diversion dikes or berms; right-of-way or perimeter diversion devices; sediment traps and barriers; processing areas, including outside painting areas; wood preparation; recycling; and raw material storage.

8.AA.3.2 Potential Pollutant Sources (See also Part 5.1.3)

Document in the SWPPP the following additional sources and activities that have potential pollutants associated with them: loading and unloading operations for paints, chemicals, and raw materials; outdoor storage activities for raw materials, paints, empty containers, corn cobs, chemicals, and scrap metals; outdoor manufacturing or processing activities such as grinding, cutting, degreasing, buffing, and brazing; onsite waste disposal practices for spent solvents, sludge, pickling baths, shavings, ingot pieces, and refuse and waste piles.

8.AA.4 Additional Inspection Requirements

8.AA.4.1 Inspections (See also Part 4)

At a minimum, include the following areas in all inspections: raw metal storage areas, finished product storage areas, material and chemical storage areas, recycling areas, loading and unloading areas, equipment storage areas, paint areas, and vehicle fueling and maintenance areas.

8.AA.4.2 Site Inspections

As part of the site's inspection, also inspect areas associated with the storage of raw metals, spent solvents and chemicals storage areas, outdoor paint areas, and drainage from roof. Potential pollutants include chromium, zinc, lubricating oil, solvents, aluminum, oil and grease, methyl ethyl ketone, steel, and related materials.

8. AA.5 Sector-Specific Routine Analytical Monitoring Values (See also Part 6.)

Table 8.AA-1 identifies routine analytical monitoring parameters and action levels that apply to the specific subsectors of Sector AA. These parameters and action levels apply to both the primary industrial activity and any co-located industrial activities.

Table 8.AA-1		
Subsector (Site discharges may be subject to requirements for more than one sector/subsector)	Parameter	Routine Analytical Monitoring Action Level
Subsector AA1. Fabricated Metal Products, except Coating (SIC 3411-3499; 3911-3915)	Total Chromium ¹	PSWD ²
	Total Iron	PSWD ²
	Total Zinc ¹	Hardness-Dependent
	Nitrate plus Nitrite Nitrogen	PSWD ²
Subsector AA2. Fabricated Metal Coating and Engraving (SIC 3479)	Total Cadmium ¹	Hardness-Dependent
	Total Zinc ¹	Hardness-Dependent
	Nitrate plus Nitrite Nitrogen	PSWD ²

¹ The routine analytical monitoring action levels for some metals are dependent on water hardness. See Permit Part 6.2.1.

² PSWD = Protected Surface Water Dependent. As part of the NOI process, the permittees action level will be based on the protected surface water lowest applicable designated use. See A.A.C. R18-11 Article 1, Appendix A and Appendix B.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart AB – Sector AB – Transportation Equipment, Industrial or Commercial Machinery Facilities

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.AB.1 Covered Stormwater Discharges

The requirements in Subpart AB apply to stormwater discharges associated with industrial activity from Transportation Equipment, Industrial or Commercial Machinery facilities as identified by the SIC Codes specified under Sector AB in Table C-1 of Appendix C of the permit.

8.AB.2 Additional SWPPP Requirements

8.AB.2.1 Drainage Area Site Map (See also Part 5.1.2)

Identify in the site's SWPPP where any of the following may be exposed to precipitation or surface runoff: vents and stacks from metal processing and similar operations.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart AC– Sector AC –Electronic and Electrical Equipment and Components, Photographic,and Optical Goods

The permittee shall comply with Part 8 sector-specific requirements associated with the site’s primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.AC.1 Covered Stormwater Discharges

The requirements in Subpart AC apply to stormwater discharges associated with industrial activity from facilities that manufacture Electronic and Electrical Equipment and Components, Photographic and Optical goods as identified by the SIC Codes specified in Table C-1 of Appendix C of the permit.

Part 8 – Sector-Specific Requirements for Industrial Activity

Subpart AD – Sector AD – Stormwater Discharges Designated by the Director as Requiring Permits

The permittee shall comply with Part 8 sector-specific requirements associated with the site's primary industrial activity and any co-located industrial activities, as defined in Appendix A. The sector-specific requirements apply to those areas of the site where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

8.AD.1 Covered Stormwater Discharges

Sector AD is used to provide permit coverage for facilities designated by the Director as needing a stormwater permit, and any discharges of stormwater associated with industrial activity that do not meet the description of an industrial activity covered by Sectors A-AC.

8.AD.1.1 Eligibility for Permit Coverage

Because this sector is primarily intended for use by discharges designated by the Director as needing a stormwater permit (which is an atypical circumstance), and the site may or may not normally be discharging stormwater associated with industrial activity, the permittee shall obtain the Director's written permission to use this permit prior to submitting an NOI. An operator, who is authorized to use this permit, shall also be required to ensure that the site's discharges meet the basic eligibility provisions of this permit at Part 1.1.

8.AD.2 Sector-Specific Routine Analytical Monitoring Parameters and Values and Effluent Limits (See also Part 6.)

The Director shall establish any additional monitoring, inspection, and reporting requirements for the site prior to authorizing an operator to be covered by this permit. Any additional monitoring requirements shall be based on the nature of activities at the site and its stormwater discharges.

Appendix A
Definitions, Abbreviations, and Acronyms

Appendix A. Definitions, Abbreviations, and Acronyms (for the purposes of this permit).

Action Levels for Routine Analytical Monitoring - pollutant concentrations that are based on the designated use of the protected surface water and are used to assess the overall effectiveness of stormwater control measures. An exceedance of an action level is not necessarily a permit violation.

Accelerated Monitoring - monitoring that is required after one stormwater sampling event result exceeds a numeric effluent limitation guideline.

Approved Total Maximum Daily Loads (TMDLs) – approved TMDLs are those that are developed by the ADEQ and approved by EPA.

AZPDES - the Arizona pollutant discharge elimination system program as adopted under section 402(b) of the clean water act for WOTUS and under A.R.S. §49-255.04 for non-WOTUS protected surface water.

Best Management Practices (BMPs) – those methods, measures or practices to prevent or reduce discharges and includes structural and nonstructural controls and operation and maintenance procedures. Best management practices may be applied before, during and after discharges to reduce or eliminate the introduction of pollutants into receiving waters. Economic, institutional and technical factors shall be considered in developing best management practices.

Co-located Industrial Activities – industrial activity(ies), in addition to the primary industrial activity, located on-site that are defined by the stormwater regulations at 122.26(b)(14)(i)-(ix) and (xi). An activity at a site is not considered co-located if the activity, when considered separately, does not meet the description of a category of industrial activity covered by the stormwater regulations or identified by the SIC code list in Appendix C and / or Table C-1 in the Mining Stormwater Permit.

Control Measures – refers to any stormwater control measure or other method (including narrative effluent limitations) used to prevent or reduce the discharge of pollutants to Waters of the United States.

Designated Use - a use of a surface water specified in Arizona's surface water quality standards rules, including those uses specified in R18-11-104. Designated uses include domestic water source, full-body contact recreation, partial body contact recreation, fish consumption, aquatic and wildlife (cold water), aquatic and wildlife (warm water), aquatic and wildlife (ephemeral), aquatic and wildlife (effluent dependent waters), agricultural irrigation, and agricultural livestock watering.

Director – means the Director of the Arizona Department of Environmental Quality or an authorized representative.

Discharge – means any addition of any pollutant to protected surface waters from any point source but does not include the addition of dredged or fill material to non-WOTUS protected surface waters.

Discharge of a Pollutant – defined in 40 CFR § 122.2 as any addition of any “pollutant” or combination of pollutants to a protected surface water from any “point source,” or any addition of any pollutant or combination of pollutants to the waters of the “contiguous zone” or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation. This includes additions of pollutants into protected surface waters from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works.

Discharge Point – for purposes of this permit, the location(s) where stormwater is discharged from the facility or site.

Effluent Limitations Guideline (ELG) – defined in 40 CFR § 122.2 as a regulation published by the Administrator under section 304(b) of the CWA to adopt or revise effluent limitations.

Ephemeral Water - means a surface water or portion of surface water that flows or pools only in direct response to precipitation. Includes non-WOTUS segments of one of the eight major rivers listed in ARS 49-221(G)(1)(b) Waters.

Existing Discharger – an operator applying for coverage under this permit for discharges authorized previously under an AZPDES general or individual permit.

Facility or Activity – any AZPDES “point source” or any other facility or activity (including land or appurtenances thereto) that is subject to regulation under the AZPDES program.

Feasible – means technologically possible and economically practicable and achievable in light of best industry practices.

Hardness - the sum of dissolved calcium and magnesium concentrations, expressed as calcium carbonate (CaCO₃) in milligrams per liter.

Impaired Water - means a protected surface waters for which credible scientific data exists that satisfies the requirements of A.R.S. §49-232, and that, in the case of waters of the U.S., demonstrate that the water should be identified pursuant to 33 United States Code section 1313(d) and the regulations implementing that statute.

Indian Country – (a) all land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and including rights-of-way running through the reservation; (b) all dependent Indian communities within the borders of the United States, whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State, and (c) all Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same. This definition includes all land held in trust for an Indian tribe. (18 U.S.C. 1151).

Industrial Activity – the 10 categories of industrial activities included in the definition of “Stormwater discharges associated with industrial activity” as defined in 40 CFR 122.26(b)(14)(i)-(ix) and (xi).

Industrial Stormwater – stormwater runoff from industrial activity.

Intermittent Water - means a surface water or portion of surface water that flows continuously during certain times of the year and more than in direct response to precipitation, such as when it receives water from a spring, elevated groundwater table or another surface source such as melting snowpack.

Materials – includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under section 101(14) of CERCLA; any chemical the facility is required to report pursuant to section 313 of Title III of SARA; fertilizers; pesticides; and waste products such as ashes, slag and sludge that have the potential to be released with stormwater discharges. See 40 CFR 122.26(b)(12).

Measurable Storm Event - a storm event that results in a stormwater discharge from one or more discharge points at the site. Measurable storm events must be separated by a minimum of 72 hours between stormwater discharges.

Minimize – reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practices.

Municipal Separate Storm Sewer– a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

- a. Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or a designated and approved management agency under section 208 of the Clean Water Act (33 U.S.C. 1288) that discharges to protected surfacewaters;
- b. Designed or used for collecting or conveying stormwater;
- c. Which is not a combined sewer; and
- d. Which is not part of a Publicly Owned Treatment Works

Natural Background Levels - means surface water quality that was present before any human-caused pollution. Natural background pollutants include those substances that are naturally occurring in native soils, vegetation, or groundwater. Natural background pollutants do not include legacy pollutants from earlier activity on the site, or pollutants in run-on from neighboring sources that are not naturally occurring (such as run-off from other industrial sites or roadways).

New Discharger – defined in 40 CFR § 122.2 as a site from which there is a discharge, that did not commence the discharge at a particular site prior to August 13, 1979, which is not a new source, and which has never received a finally effective AZPDES permit for discharges at that site. See A.A.C. R18-9-A901(24).

New Source – defined in 40 CFR § 122.2 as any building, structure, facility, site or installation from which there is or may be a “discharge of pollutants,” the construction of which commenced:

- After promulgation of standards of performance under section 306 of the CWA which are applicable to such source, or
- After proposal of standards of performance in accordance with section 306 of the CWA which are applicable to such source, but only if the standards are promulgated in accordance with section 306 within 120 days of their proposal. See R18-9-A901(25).

New Source Performance Standards (NSPS) – technology-based standards for sites that qualify as new sources under 40 CFR 122.2 and 40 CFR 122.29.

Non-structural Controls – pollution prevention methods that are not physically constructed, including procedures, schedules, training and other practices to prevent or reduce the discharge of pollutants.

No Exposure – all industrial materials or activities are protected by a storm-resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. See 40 CFR 122.26(g).

No Exposure Certification (NEC) - a submission to the Director from an applicant notifying that they intend to obtain a conditional exclusion from permit requirements by certifying that there is no exposure of industrial materials or activities to rain, snow, snowmelt, and/ or stormwater runoff and all industrial materials or activities are protected by a storm-resistant shelter. See 40 CFR 122.26 (g).

Non-Stormwater Discharges – discharges that do not originate from storm events. They can include, but are not limited to, air conditioner condensate, non-contact cooling water, pavement wash water, external building washdown, irrigation water, or uncontaminated ground water or spring water. See Part 1.1.3.

Non-WOTUS protected surface water - means a protected surface water that is not a WOTUS.

Not-attaining Water -means a protected surface water is assessed as impaired, but is not placed on the 303(d) List or equivalent for non-WOTUS protected surface waters because:

- a. A TMDL is prepared and implemented for the protected surface water;
- b. An action, which meets the requirements of R18-11-604(D)(2)(h), is occurring and is expected to bring the protected surface water to attaining before the next 303(d) List submission; or
- c. The impairment of the protected surface water is due to pollution but not a pollutant, for which a TMDL load allocation cannot be developed.

Notice of Intent (NOI) – the form (electronic or paper) required for authorization of coverage under the Multi-Sector General Permit.

Notice of Intent (NOI) Certificate - the certificate of authorization for permit coverage that is issued immediately by ADEQ after a complete and accurate NOI, along with the applicant's payment, is received by the ADEQ.

Notice of Termination (NOT) – the form (electronic or paper) required for terminating coverage under the Multi-Sector General Permit.

Notice of Termination Summary - the termination summary is issued immediately after a complete and accurate NOT is received by the ADEQ, confirming that permit coverage was terminated.

Operator – any entity with a stormwater discharge associated with industrial activity that meets either of the following two criteria:

- (i) The entity has operational control over industrial activities, including the ability to modify those activities; or
- (ii) The entity has day-to-day operational control of activities at a facility necessary to ensure compliance with the permit (e.g., the entity is authorized to direct workers at a facility to carry out activities required by the permit).

Outfall – see “Discharge Point.”

Outstanding Arizona Water – means a WOTUS protected surface water designated under A.A.C. R18-11-112.

Perennial Water – a surface water or portion of surface water that flows continuously throughout the year.

Person – defined in 40 CFR § 122.2 as an individual, association, partnership, corporation, municipality, State or Federal agency, or an agent or employee thereof.

Point source – means any discernible, confined and discrete conveyance, including, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation or vessel or other floating craft from which pollutants are or may be discharged to WOTUS or protected surface water. Point source does not include return flows from irrigated agriculture.

Pollutant – defined in 40 CFR § 122.2 as a partial listing from this definition includes: dredged spoil, solid waste, incinerator residue, filter backwash, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, and industrial, municipal and agricultural waste discharged into water. See A.A.C. R18-9-A901 (27).

Pollutant of Concern – a pollutant which causes or contributes to a violation of a water quality standard, including a pollutant which is identified as *causing an impairment in a state's 303(d) list*.

Protected Surface Waters – means waters of the State listed on the protected surface water list under A.R.S. §49-221, Subsection G and all WOTUS.

Primary industrial activity – includes any activities performed on-site which are (1) identified by the facility's primary SIC code; and included in the descriptions of 122.26(b)(14)(ii), (iii), (vi), (viii), or (xi); or (2) included in the narrative descriptions of 122.26(b)(14)(i), (iv), (v), (vii), or (ix). [For co-located activities covered by multiple SIC codes, it is recommended that the primary industrial determination be based on the value of receipts or revenues or, if such information is not available for a particular facility, the number of employees or production rate for each process may be compared. The operation that generates the

most revenue or employs the most personnel is the operation in which the facility is primarily engaged. In situations where the vast majority of on-site activity falls within one SIC code, that activity may be the primary industrial activity.] Narrative descriptions in 40 CFR 122.26(b)(14) identified above include: (i) activities subject to stormwater effluent limitations guidelines, new source performance standards, or toxic pollutant effluent standards; (iv) hazardous waste treatment storage, or disposal facilities including those that are operating under interim status or a permit under subtitle C of the Resource Conservation and Recovery Act (RCRA); (v) landfills, land application sites, and open dumps that receive or have received industrial wastes; (vii) steam electric power generating facilities; and (ix) sewage treatment works with a design flow of 1.0 mgd or more.

Qualified Personnel – qualified personnel are those (either the permittee’s employees or outside consultants) who (1) possesses knowledge and skills, gained through education and/or experience, to assess conditions and activities at the facility that could impact stormwater quality; (2) can evaluate the effectiveness of control measures and best management practices required by this permit for this specific facility and its unique operations and; (3) is familiar with site operations, permit requirements, and the facility’s SWPPP. Members of the Stormwater Pollution Prevention Team are qualified personnel. **Reportable Quantity Release** – a release of a hazardous substance at or above the established legal threshold that requires emergency notification. Refer to 40 CFR Parts 110, 117, and 302 and A.R.S. § 49-284 for complete definitions and reportable quantities for which notification is required.

Runoff Coefficient – the fraction of total rainfall that will appear at the conveyance as runoff. See 40 CFR 122.26(b)(11).

Run-On – sources of stormwater that drain from land located upslope or upstream from the regulated site.

Significant Spills and Leaks – are those that have the potential to have an adverse impact on the quality of stormwater discharges from the site. Such spills and leaks may include but are not limited to, releases of oil or hazardous substances in excess of quantities that are reportable under CWA Section 311 (see 40 CFR 110.6 and 40 CFR 117.21) or Section 102 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 USC §9602 and A.R.S. §49-284. This permit does not relieve the permittee of the reporting requirements of 40 CFR 110, 40 CFR 117, and 40 CFR 302 relating to spills or other releases of oils or hazardous substances.

Site – the land or water where any “facility or activity” is physically located or conducted, including adjacent land used in connection with the facility or activity.

Special Waters - for the purposes of this general permit, reference to special waters include waters identified by the State as impaired, not-attaining, or classified as an Outstanding Arizona Water.

Spill – the release of a hazardous or toxic substance from its container or containment.

Stormwater – stormwater runoff, snow melt runoff, and surface runoff and drainage. See 40 CFR 122.26(b)(13) & A.A.C. R18-9-A901(36).

Storm Resistant Shelter - a building or structure that is completely roofed and walled, or a structure with only a top cover but no side coverings, provided that any material or industrial activity located under or within the structure is not subject to any run-on and subsequent runoff of stormwater, or mobilization by wind.

Stormwater Discharges Associated with Construction Activity – a discharge of pollutants in stormwater runoff from areas where soil disturbing activities (e.g., clearing, grading, or excavating), construction materials, or equipment storage or maintenance (e.g., fill piles, borrow areas, concrete truck washout, fueling), or other industrial stormwater directly related to the construction process (e.g., concrete or asphalt batch plants) are located. See 40 CFR 122.26(b)(14)(x) and 40 CFR 122.26(b)(15).

Stormwater Discharges Associated with Industrial Activity – the discharge from any conveyance that is used for collecting and conveying stormwater and that is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. The term does not include discharges from facilities or activities excluded from the AZPDES program under Part 122. For the categories of industries identified in this section, the term includes, but is not limited to, stormwater discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process waste waters (as defined at part 401 of this chapter); sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and final products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to stormwater. For the purposes of this paragraph, material handling activities include storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product, by-product or waste product. The term excludes areas located at industrial sites that are separate from the facility's industrial activities, such as office buildings and accompanying parking lots as long as the drainage from the excluded areas is not mixed with stormwater drained from the above described areas. Industrial facilities include those that are federally, State, or municipally owned or operated that meet the description of the facilities listed in 40 CFR 122.26(b)(14). The term also includes those facilities designated under the provisions of 40 CFR 122.26(a)(1)(v). See 40 CFR 122.26(b)(14).

Storm Event – a precipitation event that results in a measurable amount of precipitation.

Stormwater Pollution Prevention Team – the group of individuals, identified by name, title or role, that are responsible for the development and modifications of the SWPPP and oversight of compliance with the permit requirements. The Stormwater Team is also responsible for maintaining control measures and taking corrective actions where required. The team may include members who are not employed by the site (such as third party consultants). The individuals on the “Stormwater Pollution Prevention Team” shall be identified in the SWPPP.

Structural Controls - physical or constructed features, such as silt fencing, sediment traps, and detention/retention ponds that minimize the discharge of pollutants.

Substantially Identical Outfalls – outfalls located at the facility that have comparable industrial activities, control measures, exposed materials that may significantly contribute pollutants to stormwater, and similar runoff coefficients of their drainage areas. Monitoring exceptions apply to substantially identical outfalls for visual assessment, routine analytical, and impaired waters monitoring. Substantially identical outfall exceptions, does not apply to ELG or OAW monitoring.

Surface Water Quality Standards – means a standard adopted for a non-WOTUS protected surface water pursuant to Section 49-221 and, in the case of WOTUS, pursuant to Section 49-222.

Total Maximum Daily Loads (TMDLs) –an estimation of the total amount of a pollutant from all sources that may be added to a protected surface water, while still allowing the protected surface water to achieve and maintain applicable surface water quality standards. Each total maximum daily load shall include allocations for sources that contribute the pollutant to the protected surface water. Total Maximum Daily Loads for Waters of the U.S. shall meet the requirements of section 303(d) of the Clean Water Act (33 USC 1313(d) and regulations implementing that statute to achieve applicable surface water quality standards.

Total Nitrogen - the sum of the nitrogen component from ammonia (NH₃), ammonium ion (NH₄⁺), nitrite (NO₂), nitrate (NO₃), and dissolved and particulate organic nitrogen expressed as elemental nitrogen.

Upset – an exceptional incident in which there is unintentional and temporary noncompliance with technology-based permit effluent limitations because of factors beyond your reasonable control. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment

facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation. See 40 CFR 122.41(n)(1).

Waters of the United States (WOTUS) – means a protected surface waters that are also navigable waters as defined by Section 502(7) of the Clean Water Act.

WOTUS protected surface water- means a protected surface water that is a WOTUS.

A.2. ABBREVIATIONS AND ACRONYMS

ADHS – Arizona Department of Health Service

AIM – Additional Implementation Measures

BMP – Best Management Practice

CERCLA – Comprehensive Environmental Response, Compensation and Liability Act

CFR – Code of Federal Regulations

CGP- Construction General Permit

COD – Chemical Oxygen Demand

CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 *et seq*)

DMR – Discharge Monitoring Report

ELG - Effluent Limitations Guideline

EPA – U. S. Environmental Protection Agency

MGD – Million Gallons per Day

MS4 – Municipal Separate Storm Sewer System

MSGP – Multi-Sector General Permit

NAICS – North American Industry Classification System

NEC - No Exposure Certification

NOI – Notice of Intent

NOT – Notice of Termination

OAW – Outstanding Arizona Water

POTW – Publicly Owned Treatment Works

RCRA – Resource Conservation and Recovery Act

SIC – Standard Industrial Classification

SPCC – Spill Prevention, Control, and Countermeasures

SSC – Suspended Sediment Concentration

SWPPP – Stormwater Pollution Prevention Plan

SWQS- Surface Water Quality Standard

TMDL – Total Maximum Daily Load

TSDf – Treatment, Storage, or Disposal Facility

TSS – Total Suspended Solids

WLA – Wasteload Allocation

Appendix B
Standard Permit Conditions

Appendix B. Standard Permit Conditions.

Standard permit conditions in Appendix B are consistent with the general permit provisions required under 40 CFR 122.41 and A.A.C. R-18-9-A905(A)(3).

- 1. Duty to Comply.** [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(a)(1) and A.R.S. §§ 49-261, 262, 263.01, and 263.02.]
 - a. The permittee shall comply with all conditions of this permit. For discharges to a WOTUS, any permit noncompliance constitutes a violation of the Clean Water Act; A.R.S. Title 49, Chapter 2, Article 3.1; and A.A.C. Title 18, Chapter 9, Articles 9 and 10, and is grounds for enforcement action, permit termination, revocation and reissuance, or modification, or denial of a permit renewal application.
 - b. The issuance of this permit does not waive any federal, state, county, or local regulations or permit requirements with which a person discharging under this permit is required to comply.

- 2. Duty to Reapply / Continuation of the Expired General Permit.** [A.A.C. R18-9-A905 which incorporates 40 CFR 122.41(b)]
 - a. Upon reissuance of the general permit, the permittee shall file an electronic Notice of Intent (NOI) through myDEQ, within the timeframe specified in the new general permit, and shall obtain new written authorization to discharge from the Director.
 - b. If the Director does not reissue the general permit before the expiration date, the current general permit will be administratively continued and remain in force and effect until the general permit is reissued.
 - c. Any permittee granted authorization to discharge under the general permit before the expiration date automatically remains covered by the continued general permit until the earlier of:
 - i. Reissuance or replacement of the general permit, at which time the permittee shall comply with the NOI conditions of the new general permit to maintain authorization to discharge; or
 - ii. The date the permittee has submitted an electronic Notice of Termination; or
 - iii. The date the Director has issued an individual permit for the discharge; or
 - iv. The date the Director has issued a formal permit decision not to reissue the general permit, at which time the permittee shall seek coverage under an alternative general permit or an individual permit, or cease discharge.

- 3. Need To Halt or Reduce Activity Not a Defense.** [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(c)]

It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

- 4. Duty to Mitigate.** [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(d)]

The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit that has a reasonable likelihood of adversely affecting human health or the environment.

- 5. Proper Operation and Maintenance.** [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(e)]

The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems that are

installed by a permittee only when the operation is necessary to achieve compliance with the conditions of this permit.

- 6. Permit Actions.** [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(f)]
This permit may be modified, revoked and reissued, or terminated for cause. Filing a request for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition.
- 7. Property Rights.** [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(g)]
This permit does not convey any property rights of any sort, or any exclusive privileges, nor does it authorize any injury to private property or invasion of personal rights, nor any infringement of federal, state, Indian tribe, or local laws or regulations.
- 8. Duty to Provide Information.** [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(h)]
The permittee must furnish to ADEQ, within a reasonable time, any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit or to determine compliance with this permit. The permittee shall also furnish to ADEQ upon request, copies of records required to be kept by this permit.
- 9. Signatory Requirements.** [A.A.C. R18-9-A905(A)(3)(a), which incorporates 40 CFR 122.41(k) and (l); A.A.C. R18-9-A905(A)(1)(c), which incorporates 40 CFR 122.22]
All Notices of Intent (NOI), Notices of Termination (NOT), and No Exposure Certifications (NEC) must be e-signed in the myDEQ on-line permitting system as follows:

 - a. NOIs, NOTs, and NECs:
 - i. For a corporation: By a responsible corporate officer. For the purpose of this section, a responsible corporate officer means: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or the manager of one or more manufacturing, production, or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;
 - ii. For a partnership or sole proprietorship: By a general partner or the proprietor, respectively; or
 - iii. For a municipality, State, Federal, or other public agency: By either a principal executive officer or ranking elected official. For purposes of this section, a principal executive officer of a Federal (or state) agency includes: (1) The chief executive officer (or director) of the agency, or (2) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency.
 - b. All reports required by this permit and other information requested by ADEQ as follows:
 - i. A person described in Section 9.a or by a duly authorized representative of that person. A person is a duly authorized representative only if the authorization is made in writing by a person described in Section 9.a and contained in the SWPPP.
 - ii. The authorization must specify either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of manager, operator, superintendent, or position of equivalent responsibility or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual

occupying a named position).

- c. All reports, including SWPPP and changes to the SWPPP to document corrective actions taken as required by Part 3.0, and any other compliance reports including , inspection reports, annual reports, monitoring reports, reports on training, corrective action reports and other information required by this permit must be signed by a person described in Appendix B, Subsection 9.a above or by a duly authorized representative of that person. A person is a duly authorized representative only if:
 - i. The authorization is made in writing by a person described in Appendix B, Part 9.a;
 - ii. The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may be either a named individual or any individual occupying a named position); and
 - iii. The signed and dated written authorization is included in the SWPPP. A copy must be submitted to ADEQ, upon request.
- d. All other changes to the SWPPP, and other compliance documentation required under Part 5.6, must be signed and dated by the person preparing the change of documentation.
- e. Changes to Authorization. If the information on the electronic NOI filed for permit coverage is no longer accurate because a different owner / operator has responsibility for the overall operation of the facility, a new electronic NOI satisfying the requirements of Part 1.3.1 must be submitted to ADEQ prior to or together with any reports, information, or applications to be signed in accordance with Appendix B, Subsection 9.c above. The change in authorization must be submitted within the time frame specified in Table 1-2 of the permit.
- f. Certification. Any person signing documents under the terms of this permit must make the following certification:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.
- g. Documents required by this permit that are submitted electronically by, or on behalf of, the regulated facility, any person providing the electronic signature for such documents shall meet all relevant requirements of this section. See 40 CFR 122.22(e).

10. Inspection and Entry. [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(i)]

- a. The permittee must allow ADEQ or an authorized representative to:
 - i. Enter upon the permittee's premises where a regulated facility or activity is located or conducted or where records are kept under the conditions of this permit;
 - ii. Have access to and copy at reasonable times, any records that are kept under the conditions of this general permit; and
 - iii. Inspect at reasonable times any facility or equipment (including monitoring and control equipment), practices or operations regulated or required under this permit;
 - iv. Sample or monitor at reasonable times any substances or parameters at any location, for the purposes of assuring permit compliance or as otherwise authorized by A.R.S. Title 49, Chapter 2, Article 3.1, and 18 A.A.C. 9, Articles 9 and 10; and
- b. If the facility discharges to an MS4, the permittee must allow representatives of the municipal operator or the separate storm sewer receiving the discharge to inspect the site and obtain

copy of records pertaining to the discharge or the conditions of this permit.

11. Monitoring and Records [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(j)].

- a. Samples and measurements taken for the purpose of monitoring must be representative of the monitored activity.
- b. The permittee must retain records of all monitoring information, all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for at least three (3) years from the date this permit coverage expires or the permit authorization is terminated. This period may be extended by request of the Director at any time. Permittees must submit any such records to ADEQ upon request.
- c. Records of monitoring information must include:
 - i. The date, exact place, and time of sampling or measurements;
 - ii. The individual(s) who performed the sampling or measurements;
 - iii. The date(s) analyses were performed;
 - iv. The time(s) the analyses were initiated;
 - v. The individual(s) who performed the analyses;
 - vi. References and written procedures, when available, for the analytical techniques or methods used;
 - vii. The analytical techniques or methods used; and
 - viii. The results of such analyses.
- d. Monitoring must be conducted according to test procedures approved under 40 CFR 136, unless specific test procedures have been otherwise specified in this permit.
- e. Any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained in this permit is subject to the enforcement actions established under A.R.S. Title 49, Chapter 2, Article 4, which includes the possibility of fines and/or imprisonment.

12. Reporting Requirements. [A.A.C. R18-9-A905(A)(3)(a) which incorporates 40 CFR 122.41(l)]

- a. Planned changes. The permittee shall give notice to the Director as soon as possible, but no fewer than 30 days, of any planned physical alterations or additions to the permitted facility. Notice is required only when:
 - i. A permitted facility discharges to a WOTUS and the alteration or addition to the facility may meet one of the criteria for determining whether a facility is a new source in 40 CFR 122.29(b) (incorporated by reference at A.A.C. R18-9-A905(A)(1)(e)); or
 - ii. The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the permit, nor to notification requirements under 40 CFR 122.42(a)(1) (incorporated by reference at A.A.C. R18-9-A905(A)(3)(b)).
- b. Monitoring reports. Monitoring results must be reported at the intervals specified elsewhere in this permit.
 - i. Pursuant to Part 7.1, all monitoring results must be submitted electronically to the ADEQ using the e-Discharge Monitoring Report (e-DMR) form available at www.azdeq.gov
 - ii. If the permittee monitors the discharge of any pollutant more frequently than required by the permit using test procedures approved under 40 CFR Part 136 unless otherwise specified in 40 CFR Part 503, or as specified in the permit, the results of this monitoring

shall be included in the e-DMR (if available), or submitted as a separate report.

- iii. Calculations for all limitations which require averaging of measurements must use an arithmetic mean and non-detected results must be incorporated in calculations as the limit of quantitation for the analysis.
- c. Anticipated noncompliance. The permittee shall give advance notice to the Director of any planned changes in the permitted facility or activity that may result in noncompliance with permit requirements.
- d. Twenty-four hour reporting.
 - i. The permittee shall report to ADEQ any noncompliance with this permit which may endanger human health or the environment. The permittee shall orally notify the office listed below within 24 hours:

Arizona Department of Environmental Quality
Water Quality Compliance
1110 W. Washington Street, Mail Code 5415A-1
Phoenix, AZ 85007
Office: 602-771 – 1440

- ii. A written submission shall also be provided to the office identified above within five (5) days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the noncompliance.
- iii. The following shall be included as information which must be reported within 24 hours under this paragraph.
 - 1) Any unanticipated bypass which extends any effluent limitation in the permit.
 - 2) Any upset which exceeds any effluent limitation in the permit.
 - 3) Violation of a maximum daily discharge limitation for any of the pollutants listed by the Director in the permit to be reported within 24 hours. (See 40 CFR 122.44(g) which is incorporated by reference at A.A.C. R18-9-A905(A)(3)(d)).
- iv. ADEQ may waive the written report on a case-by-case basis for reports under this subsection if the oral report has been received within 24 hours.
- e. Other noncompliance. The permittee shall report all instances of noncompliance not otherwise required to be reported under this subsection, at the time monitoring reports are submitted. The reports shall contain the information listed in subsection 12(d).
- f. Other information. When the permittee becomes aware that he or she failed to submit any relevant facts or submitted incorrect information in the Notice of Intent or in any other report to the Department, the permittee shall promptly submit the facts or information to ADEQ at:

Arizona Department of Environmental Quality
Water Quality Division - MSGP
1110 W. Washington Street, Mail Code 5415A-1
Phoenix, AZ 85007

13. Reopener Clause. [A.A.C. R18-9-C905 which incorporates 40 CFR 122.62(a) or (b)])
The ADEQ may elect to modify the permit prior to its expiration (rather than waiting for the new permit cycle) to comply with any new statutory or regulatory requirements, such as for effluent limitation guidelines, which may be promulgated in the course of the current permit cycle.

14. Other Environmental Laws. No condition of this general permit releases the permittee from any

responsibility or requirements under other environmental statutes or regulations. For example, this permit does not authorize the “taking” of endangered or threatened species as prohibited by Section 9 of the Endangered Species Act, 16 U.S.C. 1538. Information regarding the location of endangered and threatened species and guidance on what activities constitute a “taking” are available from the U.S. Fish and Wildlife Service. The permittee must also comply with applicable State and Federal laws, including Spill Prevention Control and Countermeasures (SPCC).

- 15. State or Tribal Law.** [Pursuant to A.A.C. R18-9-A904(C)] Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable State or Tribal law or regulation under authority preserved by Section 510 of the Clean Water Act.
- 16. Severability.** The provisions of this general permit are severable, and if any provision of this general permit, or the application of any provision of this general permit to any circumstance, is held invalid, the application of the provision to other circumstances, and the remainder of this general permit shall not be affected.
- 17. Requiring Coverage under an Individual Permit or an Alternative General Permit.**
- a. For discharges to a WOTUS: The Director may require a person authorized by this permit to apply for and/or obtain either an individual AZPDES permit or an alternative AZPDES general permit. For discharges to a non-WOTUS: Discharges to non-WOTUS protected surface waters, ADEQ may require an operator to obtain authorization under an Individual AZPDES Permit if the requirements in A.R.S. § 49-255.04(C) are made. Any interested person may petition ADEQ to take action under this section. ADEQ may require a permittee authorized to discharge under this permit to apply for an individual permit in any of the following cases:
 - i. A change occurs in the availability of demonstrated technology or practices for the control or abatement of pollutants applicable to the point source;
 - ii. Effluent limitation guidelines are promulgated for point sources covered by the general permit;
 - iii. An Arizona Water Quality Management Plan containing requirements applicable to the point sources is approved;
 - iv. Circumstances change after the time of the request to be covered so that the discharger is no longer appropriately controlled under the general permit, or either a temporary or permanent reduction or elimination of the authorized discharge is necessary;
 - v. If the Director determines that the discharge is a significant contributor of pollutants. When making this determination, the Director shall consider:
 - 1) The location of the discharge with respect to protected surface waters ,
 - 2) The size of the discharge,
 - 3) The quantity and nature of the pollutants discharged to protected surface waters , and
 - 4) Any other relevant factor.
 - b. If an individual permit is required, the Director shall notify the discharger in writing of the decision. The notice shall include:
 - i. A brief statement of the reasons for the decision;
 - ii. An application form;
 - iii. A statement setting a deadline to file the application;
 - iv. A statement that on the effective date of issuance or denial of the individual permit, coverage under the general permit will automatically terminate;
 - v. The applicant’s right to appeal the individual permit requirement with the Water Quality Appeals Board under A.R.S. § 49-323, the number of days the applicant has to file a

protest challenging the individual permit requirement, and the name and telephone number of the ADEQ contact person who can answer questions regarding the appeals process; and

- vi. The applicant's right to request an informal settlement conference under A.R.S. 41-1092.03(A) and 41-1092.06.
- c. The discharger shall apply for an individual permit within 90 days of receipt of the notice, unless the Director grants a later date. In no case shall the deadline be more than 180 days after the date of the notice.
- d. If the discharger fails to submit the individual permit application within the time period established in Appendix B.17.c the applicability of the general permit to the discharger is automatically terminated at the end of the day specified by the Director for application submittal.
- e. Coverage under the general permit shall continue until an individual permit is issued or denied unless the general permit coverage is terminated under Appendix B. Subsection 17.d.

18. Request for an Individual Permit.

- a. A permittee may request an exclusion from coverage of a general permit by applying for an individual permit.
 - i. The permittee shall submit an individual permit application under R18-9-B901(B) and include the reasons supporting the request no later than 90 days after publication of the general permit. If the application is for discharges to non-WOTUS protected surface waters, the applicant does not need to submit the information required by 40 C.F.R. §§ 122.26(c)(1)(i)(E)(1) & 122.26(c)(1)(i)(G).
 - ii. The Director shall grant the request if the reasons cited by the permittee are adequate to support the request.
- b. If an individual permit is issued to a person otherwise subject to a general permit, the applicability of the general permit to the discharge is automatically terminated on the effective date of the individual permit.

19. Transfer of Coverage. Coverage under this permit is not transferable from one person to another, is non-transferable when the business/ facility name changes, or when there is a change in facility/ site location. Pursuant to Arizona Administrative Code, R18-9-C904, the permittee shall comply with the following conditions:

- a. Transfer of coverage from one operator to a different operator (e.g., site sold to a new company): the new owner /operator must complete and file an electronic Notice of Intent (NOI) in accordance with Part 1.3.1 thirty (30) calendar days prior to taking over operational control of the site. The former owner /operator must file an electronic Notice of Termination (NOT) within thirty (30) days after the new owner /operator has assumed responsibility for the facility.
- b. Name changes of the permittee (e.g., Company "ABC Inc" changes name to "ABC LLC") require the operator to file for a new electronic Notice of Intent (NOI). The facility with the newname must complete and file an electronic NOI in accordance with Part 1.3.1 thirty (30) calendar days before the name change. The facility under the previous name, must file an electronic Notice of Termination (NOT) within thirty (30) days of the name change.
- c. In the event the facility or activity moves to another location, or is otherwise different than the location identified by the permittee on the original NOI, the permittee must submit a new electronic NOI that accurately identifies the regulated facility or activity. The new e-NOI must include all of the information and requirements specified in Part 1.3.1 of this permit, including the corresponding initial fee and be submitted thirty (30) calendar days before the change in location. The facility under the previous location, must file an electronic Notice of Termination (NOT) within thirty (30) days from the change of location.

20. Bypass

- a. Definitions.
 1. Bypass means the intentional diversion of waste streams from any portion of a treatment facility
 2. Severe property damage means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.
- b. Bypass not exceeding limitations. The permittee may allow any bypass to occur that does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions Appendix B, Subsections 20.c and 20.d.
- c. Notice.
 1. Anticipated bypass. If the permittee knows in advance of the need for a bypass, prior notice shall be submitted at least ten days before the date of the bypass.
 2. Unanticipated bypass. The permittee shall submit notice of an unanticipated bypass as required in Appendix B, Subsection 12.d.
- d. Prohibition of bypass.
 1. Bypass is prohibited, and ADEQ may take enforcement action against the permittee for bypass, unless:
 - i. Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;
 - ii. There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
 - iii. The permittee submitted notices as required under Appendix B, Subsection 20.c.
 2. ADEQ may approve an anticipated bypass, after considering its adverse effects, if the ADEQ determines that it will meet the three conditions listed above in this Appendix B, Subsection 20.d.

21. Upset

- a. Definition. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the operator. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.
- b. Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the requirements of Appendix B, Subsection 21.c are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.
- c. Conditions necessary for a demonstration of upset. A permittee who wishes to establish the affirmative defense of upset must demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

1. An upset occurred and that the permittee can identify the cause(s) of the upset;
 2. The permitted facility was at the time being properly operated;
 3. The permittee submitted notice of the upset as required in Appendix B, Subsection 12.d (iii); and
 4. The permittee complied with any remedial measures required under Appendix B, Subsection 4.
- d. Burden of proof. In any enforcement proceeding, the permittee, who is seeking to establish the occurrence of an upset, has the burden of proof.

22. Retention of Records

Copies of the SWPPP and all documentation required by this permit, including records of all data used to complete the NOI to be covered by this permit, must be retained for at least three years from the date permit coverage expires or permit authorization is terminated. This period may be extended by the request of ADEQ at any time.

23. Penalties for Violations of Permit Conditions.

Any permit noncompliance constitutes a violation and is grounds for an enforcement action, permit termination, revocation and reissuance, modification, or denial of a permit renewal application.

- a. Civil Penalties. A.R.S. § 49-262 provides that any person who violates any provision of A.R.S. Title 49, Chapter 2, Article 2, 3 or 3.1 or a rule, permit, discharge limitation or order issued or adopted under A.R.S. Title 49, Chapter 2, Article 3.1 is subject to a civil penalty not to exceed \$25,000 per day per violation.
- b. Criminal Penalties. Any a person who violates a condition of this general permit, or violates a provision under A.R.S. Title 49, Chapter 2, Article 3.1, or A.A.C. Title 18, Chapter 2, Articles 9 and 10 is subject to the enforcement actions established under A.R.S. Title 49, Chapter 2, Article 4, which may include the possibility of fines and/or imprisonment.

Appendix C
Facilities and Activities Covered

Appendix C. Facilities and Activities Covered

Permit eligibility is limited to discharges from facilities in the “sectors” of industrial activity summarized in Table C-1. These sector descriptions are based on Standard Industrial Classification (SIC) Codes and Industrial Activity Codes. References to “sectors” in this permit (e.g., sector-specific monitoring requirements) refer to these groupings.

Table C-1. Non-Mining Sectors of Industrial Activity Covered by This Permit		
Subsector (May be subject to more than one sector/subsector)	SIC Code or Activity Code¹	Activity Represented
SECTOR A: TIMBER PRODUCTS		
A1	2421	General Sawmills and Planing Mills
A2	2491	Wood Preserving
A3	2411	Log Storage and Handling
A4	2426	Hardwood Dimension and Flooring Mills
	2429	Special Product Sawmills, Not Elsewhere Classified
	2431-2439 (except 2434)	Millwork, Veneer, Plywood, and Structural Wood (see Sector W)
	2441	Nailed and Lock Corner Wood Boxes and Shook
	2448	Wood Pallets and Skids
	2449	Wood Containers, Not Elsewhere Classified
	2451, 2452	Wood Buildings and Mobile Homes
	2493	Reconstituted Wood Products
2499	Wood Products, Not Elsewhere Classified	
SECTOR B: PAPER AND ALLIED PRODUCTS		
B1	2631	Paperboard Mills
B2	2611	Pulp Mills
	2621	Paper Mills
	2652-2657	Paperboard Containers and Boxes
	2671-2679	Converted Paper and Paperboard Products, Except Containers and Boxes
SECTOR C: CHEMICALS AND ALLIED PRODUCTS		
C1	2873-2879	Agricultural Chemicals
C2	2812-2819	Industrial Inorganic Chemicals
C3	2841-2844	Soaps, Detergents, and Cleaning Preparations; Perfumes, Cosmetics, and Other Toilet Preparations
C4	2821-2824	Plastics Materials and Synthetic Resins, Synthetic Rubber, Cellulosic and Other Manmade Fibers Except Glass
C5	2833-2836	Medicinal Chemicals and Botanical Products; Pharmaceutical Preparations; in vitro and in vivo Diagnostic Substances; and Biological Products, Except Diagnostic Substances
	2851	Paints, Varnishes, Lacquers, Enamels, and Allied Products

Table C-1. Non-Mining Sectors of Industrial Activity Covered by This Permit		
Subsector (May be subject to more than one sector/subsector)	SIC Code or Activity Code¹	Activity Represented
	2861-2869	Industrial Organic Chemicals
	2891-2899	Miscellaneous Chemical Products
	3952 (limited to list of inks and paints)	Inks and Paints, Including China Painting Enamels, India Ink, Drawing Ink, Platinum Paints for Burnt Wood or Leather Work, Paints for China Painting, Artist's Paints and Artist's Watercolors
	2911	Petroleum Refining
SECTOR D: ASPHALT PAVING AND ROOFING MATERIALS AND LUBRICANTS		
D1	2951, 2952	Asphalt Paving and Roofing Materials
D2	2992, 2999	Miscellaneous Products of Petroleum and Coal
SECTOR E: GLASS, CLAY, CEMENT, CONCRETE, AND GYPSUM PRODUCTS		
E1	3251-3259	Structural Clay Products
	3261-3269	Pottery and Related Products
E2	3271-3275	Concrete, Gypsum, and Plaster Products
E3	3211	Flat Glass
	3221, 3229	Glass and Glassware, Pressed or Blown
	3231	Glass Products Made of Purchased Glass
	3241	Hydraulic Cement
	3281	Cut Stone and Stone Products
	3291-3299	Abrasive, Asbestos, and Miscellaneous Non-metallic Mineral Products
SECTOR F: PRIMARY METALS		
F1	3312-3317	Steel Works, Blast Furnaces, and Rolling and Finishing Mills
F2	3321-3325	Iron and Steel Foundries
F3	3351-3357	Rolling, Drawing, and Extruding of Nonferrous Metals
F4	3363-3369	Nonferrous Foundries (Castings)
F5	3331-3339	Primary Smelting and Refining of Nonferrous Metals
	3341	Secondary Smelting and Refining of Nonferrous Metals
	3398, 3399	Miscellaneous Primary Metal Products
SECTOR K: HAZARDOUS WASTE TREATMENT, STORAGE, OR DISPOSAL FACILITIES		
K1	HZ	Hazardous Waste Treatment, Storage, or Disposal Facilities, including those that are operating under interim status or a permit under subtitle C of RCRA
SECTOR L: LANDFILLS, LAND APPLICATION SITES, AND OPEN DUMPS		
L1	LF	All Landfill, Land Application Sites and Open Dumps
L2	LF	All Landfill, Land Application Sites and Open Dumps, except Municipal Solid Waste Landfill (MSWLF) Areas Closed in Accordance with 40 CFR 258.60
SECTOR M: AUTOMOBILE SALVAGE YARDS		

Table C-1. Non-Mining Sectors of Industrial Activity Covered by This Permit		
Subsector (May be subject to more than one sector/subsector)	SIC Code or Activity Code¹	Activity Represented
M1	5015	Automobile Salvage Yards
SECTOR N: SCRAP RECYCLING FACILITIES		
N1	5093	Scrap Recycling and Waste Recycling Facilities except Source-Separated Recycling
N2	5093	Source-separated Recycling Facility
SECTOR O: STEAM ELECTRIC GENERATING FACILITIES		
O1	SE	Steam Electric Generating Facilities, including coal handling sites
SECTOR P: LAND TRANSPORTATION AND WAREHOUSING		
P1	4011, 4013	Railroad Transportation
	4111-4173	Local and Highway Passenger Transportation
	4212-4231	Motor Freight Transportation and Warehousing
	4311	United States Postal Service
	5171	Petroleum Bulk Stations and Terminals
SECTOR Q: WATER TRANSPORTATION		
Q1	4412-4499	Water Transportation Facilities
SECTOR R: SHIP AND BOAT BUILDING AND REPAIRING YARDS		
R1	3731, 3732	Ship and Boat Building or Repairing Yards
SECTOR S: AIR TRANSPORTATION FACILITIES		
S1	4512-4581	Air Transportation Facilities
SECTOR T: TREATMENT WORKS		
T1	TW	Treatment Works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility, with a design flow of 1.0 MGD or more, or required to have an approved pretreatment program under 40 CFR Part 403. Not included are farm lands, domestic gardens or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with section 405 of the CWA.
SECTOR U: FOOD AND KINDRED PRODUCTS		
U1	2041-2048	Grain Mill Products
U2	2074-2079	Fats and Oils Products
U3	2011-2015	Meat Products
	2021-2026	Dairy Products
	2032-2038	Canned, Frozen, and Preserved Fruits, Vegetables, and Food Specialties

Table C-1. Non-Mining Sectors of Industrial Activity Covered by This Permit		
Subsector (May be subject to more than one sector/subsector)	SIC Code or Activity Code¹	Activity Represented
	2051-2053	Bakery Products
	2061-2068	Sugar and Confectionery Products
	2082-2087	Beverages
	2091-2099	Miscellaneous Food Preparations and Kindred Products
	2111-2141	Tobacco Products
SECTOR V: TEXTILE MILLS, APPAREL, AND OTHER FABRIC PRODUCT MANUFACTURING; LEATHER AND LEATHER PRODUCTS		
V1	2211-2299	Textile Mill Products
	2311-2399	Apparel and Other Finished Products Made from Fabrics and Similar Materials
	3131-3199	Leather and Leather Products (note: see Sector Z1 for Leather Tanning and Finishing)
SECTOR W: FURNITURE AND FIXTURES		
W1	2434	Wood Kitchen Cabinets
	2511-2599	Furniture and Fixtures
SECTOR X: PRINTING AND PUBLISHING		
X1	2711-2796	Printing, Publishing, and Allied Industries
SECTOR Y: RUBBER, MISCELLANEOUS PLASTIC PRODUCTS, AND MISCELLANEOUS MANUFACTURING INDUSTRIES		
Y1	3011	Tires and Inner Tubes
	3021	Rubber and Plastics Footwear
	3052, 3053	Gaskets, Packing and Sealing Devices, and Rubber and Plastic Hoses and Belting
	3061, 3069	Fabricated Rubber Products, Not Elsewhere Classified
Y2	3081-3089	Miscellaneous Plastics Products
	3931	Musical Instruments
	3942-3949	Dolls, Toys, Games, and Sporting and Athletic Goods
	3951-3955 (except 3952 – see Sector C)	Pens, Pencils, and Other Artists' Materials
	3961, 3965	Costume Jewelry, Costume Novelties, Buttons, and Miscellaneous Notions, Except Precious Metal
	3991-3999	Miscellaneous Manufacturing Industries
SECTOR Z: LEATHER TANNING AND FINISHING		
Z1	3111	Leather Tanning and Finishing

Table C-1. Non-Mining Sectors of Industrial Activity Covered by This Permit		
Subsector (May be subject to more than one sector/subsector)	SIC Code or Activity Code¹	Activity Represented
SECTOR AA: FABRICATED METAL PRODUCTS		
AA1	3411-3499 (except 3479)	Fabricated Metal Products, Except Machinery and Transportation Equipment, and Coating, Engraving, and Allied Services.
	3911-3915	Jewelry, Silverware, and Plated Ware
AA2	3479	Fabricated Metal Coating and Engraving
SECTOR AB: TRANSPORTATION EQUIPMENT, INDUSTRIAL OR COMMERCIAL MACHINERY		
AB1	3511-3599 (except 3571-3579)	Industrial and Commercial Machinery, Except Computer and Office Equipment (see Sector AC)
	3711-3799 (except 3731, 3732)	Transportation Equipment Except Ship and Boat Building and Repairing (see Sector R)
SECTOR AC: ELECTRONIC, ELECTRICAL, PHOTOGRAPHIC, AND OPTICAL GOODS		
AC1	3571-3579	Computer and Office Equipment
	3812-3873	Measuring, Analyzing, and Controlling Instruments; Photographic and Optical Goods, Watches, and Clocks
	3612-3699	Electronic and Electrical Equipment and Components, Except Computer Equipment
SECTOR AD: NON-CLASSIFIED FACILITIES		
AD1	Other stormwater discharges designated by the Director as needing a permit (see 40 CFR 122.26(a)(9)(i)(C) & (D)) or any facility discharging stormwater associated with industrial activity not described by any of Sectors A-AC. <i>NOTE: Facilities may not elect to be covered under Sector AD. Only the Director may assign a facility to Sector AD.</i>	

¹ A complete list of SIC Codes (and conversions from the newer North American Industry Classification System” (NAICS) can be obtained from the Internet at <http://www.census.gov/epcd/www/naics.html> or in paper form from various locations in the document titled *Handbook of Standard Industrial Classifications*, Office of Management and Budget, 1987.

Appendix D
**Calculating Hardness in Protected Surface Waters Receiving Stormwater Discharges for
Hardness-Dependent Metals**

Appendix D. Calculating Hardness in Protected Surface Waters Receiving Stormwater Discharge for Hardness-Dependent Metals

Overview

Routine analytical monitoring action levels are calculated for the hardness-dependent metals (i.e. cadmium, chromium III, copper, lead, nickel, silver, and zinc). For any sectors required to conduct sampling for a hardness-dependent metal, the hardness of the protected surface water (if stormwater is discharged to a perennial or intermittent stream) or the hardness of the stormwater discharge (if the stormwater discharge is to an ephemeral wash) shall be provided to calculate the routine analytical monitoring action levels. The action level is calculated through the use of a mathematical formula summarized in Table 1 (See A.A.C. R18-11, Appendix A, Table 2 through Table 9). The action level will be compared to the lowest designated use for that protected surface water, for the specific metal using the acute standard. The formulas include default metal translators to convert dissolved criteria to total recoverable action levels. The use of default metal translators is consistent with EPA's *The Metals Translator: Guidance For Calculating A Total Recoverable Permit Limit From A Dissolved Criterion*.

For those discharges to non-WOTUS protected surface waters, if the parameter includes an analysis for total metals, the permittee can substitute the dissolved fraction for that parameter if the most stringent SWQS applicable in the non-WOTUS protected surface water is expressed as dissolved.

Table 1. Hardness Formulas for Determining Action Levels for Total Metals

Designated Use of the Protected Surface Water	Formula used to calculate action level using hardness
Acute Total Cadmium	
A&W ¹ c ²	$e(1.0166 \cdot \text{LN}(\text{Hardness}) - 3.924)$
A&W w ³ , and edw ⁴	$e(1.128 \cdot \text{LN}(\text{Hardness}) - 3.6867)$
A&W ephemeral	$e(1.128 \cdot \text{LN}(\text{Hardness}) - 0.9691)$
Acute Total Chromium III	
A&W c, w and edw	$e(0.819 \cdot \text{LN}(\text{Hardness}) + 3.7256)$
A&W ephemeral	$e(0.819 \cdot \text{LN}(\text{Hardness}) + 4.9361)$
Acute Total Copper	
A&W c, w and edw	$e(0.9422 \cdot \text{LN}(\text{Hardness}) - 1.702)$
A&W ephemeral	$e(0.9422 \cdot \text{LN}(\text{Hardness}) - 1.1514)$
Acute Total Lead	
A&W c, w and edw	$e(1.273 \cdot \text{LN}(\text{Hardness}) - 1.46)$
A&W ephemeral	$e(1.273 \cdot (\text{LN}(\text{Hardness})) - 0.7131)$
Acute Total Nickel	
A&W c,w and edw	$e(0.846 \cdot \text{LN}(\text{Hardness}) + 2.255)$
A&W ephemeral	$e(0.846 \cdot \text{LN}(\text{Hardness}) + 4.4389)$
Acute Total Silver	
A&W c, w, edw, and ephemeral	$e(1.72 \cdot \text{LN}(\text{Hardness}) - 6.59)$
Acute Total Zinc	
A&W c, w and edw	$e(0.8473 \cdot \text{LN}(\text{Hardness}) + 0.884)$
A&W ephemeral	$e(0.8473 \cdot \text{LN}(\text{Hardness}) + 3.1342)$

1. A&W=Aquatic and Wildlife
2. c= cold water
3. w= warm water
4. edw= effluent dependent water

What is Hardness?

Hardness means the sum of the dissolved calcium and magnesium concentrations, expressed as calcium carbonate (CaCO₃) in milligrams per liter (mg/L). Once a sample is analyzed for hardness, the hardness concentration is inserted into the formula in order to calculate the value for that metal. The hardness values that can be entered into the formula(s), can range from a value of "0" to a hardness value that may not exceed 400 mg/L CaCO₃.

How to Determine Hardness for Hardness-Dependent Metals

The permittee may select one of three methods to determine an appropriate hardness value: individual hardness sample collected by permittee, hardness sampling by a group of permittees that are discharging to the same protected surface water, or using reliable and scientifically defensible third-party data (data collected under similar discharging conditions). Regardless of the method used, the permittee is responsible for documenting the procedures used to determine hardness values.

Permittee or Group of Permittees Sample for Hardness

The permittee or a group of permittees discharging to the same waterbody may elect to sample for hardness. Hardness must be sampled and analyzed using approved methods as described in 40 CFR Part 136. Permittees should only choose to sample for hardness if it is feasible and safe to do so.

If choosing to sample for hardness, the sample must be collected in the following manner:

- For perennial or intermittent water, the hardness of the protected surface water receiving the discharge shall be analyzed, if feasible and safe to collect a sample. The hardness sample shall be collected downstream from the point of discharge and collected at the same time the metal sample is collected, if feasible and safe to do so.
- For ephemeral waters, the permittee may sample the hardness of the stormwater discharge leaving the facility or the permittee may sample the downstream perennial or intermittent protected surface water. The hardness sample shall be collected at the same time the metal sample is collected, if feasible and safe to do so.

For a group of permittees to use the same hardness results, hardness measurements must be taken on a stream reach within a reasonable distance of the discharge points of each of the group members.

Third-Party Hardness Data

Permittees can submit protected surface water hardness data collected by a third party provided the results are collected consistent with the approved 40 CFR Part 136 methods. The data may come from a local utility, previously conducted stream studies, TMDL implementation plans, peer reviewed literature, other government publications, or data previously collected by the permittee. Data must be less than five (5) years old.

Reporting of Hardness Values

The results of the hardness value(s) shall be reported on the electronic Discharge Monitoring Report (e-DMR). The e-DMR will calculate the permit limits for the hardness dependent metal(s), once the hardness value is entered onto the e-DMR.
